# Api 16c Specification

---

API Specification for Fire Test for End Connections

High-Performance Bolting Technology for Offshore Oil and Natural Gas Operations

API Specification for Fire Test for Valves

API Specification for Miscellaneous Production Equipment

API Specification for Quality Programs

API Specification for Flanged Steel Gate and Plug Valves for Multiple Parallel String Completions in Production Service

Choke and Kill Equipment

API Specification for High-test Line Pipe

API Specification for Spiral-weld Line Pipe

API specification

High Performance Elastomers 2000

API Specification for High-strength Casing and Tubing

API Specification for Drill Pipe/casing Protectors (DP/CP)

API Specification for Oil-well Drilling-fluid Materials

API Specification for Rotary Drilling Equipment

API Specification for Wellhead Equipment

Specification for Line Pipe

API Specification for Drill Pipe

API Specification for Wooden Derricks

API Specification for Oil-well Drilling-fluid Materials

API Specification for Flanged Wellhead and Drilling-through Equipment

API Specification for Casing, Tubing and Drill Pipe

API Specification for Rotary Drilling Equipment

API Specification for Drilling and Production Hoisting Equipment

API Specification for Flanged Steel Gate and Plug Valves for Drilling and Production Service

Line Pipe

API Specification for Oil-well Drilling Fluid Materials

API Specification for Polyethylene Line Pipe (PE)

API Specification for Portable Masts

API 16A : specification for drill through equipment

Specification for Thermoplastic Line Pipe (PVC and CPVC)

API Specification for Spiral-welded Line Pipe

API Specification for Bolted Production Tanks

API Specification for Fire Test for End Connections

API Specification for Casing, Tubing, and Drill Pipe

API Specification for High-test Line Pipe

API Specification[s]

API Specification for Steel Gate, Plug, Ball and Check Valves for Pipeline Service

API Specification

API Specification for Oil-well Cements and Cement Additives

*Api 16c*

### API Specification for Fire Test for End Connections

iSmithers Rapra  
Publishing

Commercially significant amounts of crude oil and natural gas lie under the continental shelf of the United States. Advances in locating deposits, and

improvements in drilling and recovery technology, have made it technically and economically feasible to extract these resources under harsh conditions. But extracting these offshore petroleum resources involves the possibility, however remote, of oil spills, with resulting damage to the ocean and the coastline ecosystems and risks to

life and limb of those performing the extraction. The environmental consequences of an oil spill can be more severe underwater than on land because sea currents can quickly disperse the oil over a large area and, thus, cleanup can be problematic. Bolted connections are an integral feature of deep-water well operations.

High-Performance Bolting Technology for Offshore Oil and Natural Gas Operations summarizes strategies for improving the reliability of fasteners used in offshore oil exploration equipment, as well as best practices from other industrial sectors. It focuses on critical bolting—bolts, studs, nuts, and fasteners used on critical connections.
