The application of the Fourier transform is being seen to an increasing extent in all branches of chemistry, but it is in the area of chemical analysis that the greatest activity is taking place. Fourier transform infrared and nuclear magnetic resonance spectrometry are already routine methods for obtaining high-sensitivity IR and NMR spectra. Analogous methods are now being developed for mass spectrometry (Fourier transform ion cyclotron resonance spectrometry) and microwave spectroscopy, and Fourier transform techniques have been successfully applied in several areas of electrochemistry. In addition the fast Fourier transform algorithm has been used for smoothing, interpolation, and more efficient storage of data, and has been studied as a potential method for more efficient identification of samples using pattern recognition techniques. Linear transforms have also been shown to be useful in analytical chemistry. Probably the most important of these is the Hadamard transform, which has been applied in alternative methods for obtaining IR and NMR data at high sensitivity. Even though measurements involving this algorithm will probably not be applied as universally as their Fourier transform analogs, in the area of pattern recognition application of the Hadamard transform will in all probability prove more important than application of the Fourier transform.

This successor volume to The Hidden Origins of Islam (edited by Karl-Heinz Ohlig and Gerd-R. Puin) continues the pioneering research begun in the first volume into the earliest development

of Islam. Using coins, commemorative building inscriptions, and a rigorous linguistic analysis of the Koran along with Persian and Christian literature from the seventh and eighth centuries--when Islam was in its formative stages--five expert contributors attempt a reconstruction of this critical time period. Despite the scholarly nature of their work, the implications of their discoveries are startling: -Islam originally emerged as a sect of Christianity. -Its central theological tenets were influenced by a pre-Nicean, Syrian Christianity. -Aramaic, the common language throughout the Near East for many centuries and the language of Syrian Christianity, significantly influenced the Arabic script and vocabulary used in

the Koran. -Finally, it was not until the end of the eighth and ninth centuries that Islam formed as a separate religion, and the Koran underwent a period of historical development of at least 200 years. Controversial and highly intriguing, this critical historical analysis reveals the beginning of Islam in a completely new light.
