FORENSIC  
INVESTIGATOR Geoff

Bernasconi had always been passionate about his job as a policeman in rural New South Wales and, from the earliest days of his career, went the extra mile, both for victims of crime and for their families. But one night in 1984, he was called

to investigate the scene of an horrific car accident in which an entire family had been wiped out – and which it was impossible for him to forget. Geoff's day-to-day working life became a catalogue of tragedies, some of which involved people close to him, and he found himself spiralling downwards in the grip of post-traumatic stress disorder. When Esther Mckay, fellow forensic investigator and author of the best-selling *Crime Scene*, heard that Geoff has been awarded maximum compensation for his suffering, she knew immediately this was a story that needed to be told. This is a harrowing account of what it is like to work on the front-line of crime and tragedy as a

forensic investigator. But it is also the inspiring story of someone who has been exposed to sights and experiences many of us can hardly even imagine, yet has emerged from the darkness to begin his journey to recovery. *Social Ecology* Pearson Education

The modern means of communication have turned the world into an information fishbowl and, in terms of foreign policy and national security in post-Cold War power politics, helped transform international power politics. Information operations (IO), in which time zones are as important as national boundaries, is the use of modern technology to deliver critical information and

influential content in an effort to shape perceptions, manage opinions, and control behavior.

Contemporary IO differs from traditional psychological operations practiced by nation-states, because the availability of low-cost high technology permits nongovernmental organizations and rogue elements, such as terrorist groups, to deliver influential content of their own as well as facilitates damaging cyber-attacks ("hactivism") on computer networks and infrastructure. As current vice president Dick Cheney once said, such technology has turned third-class powers into first-class threats. Conceived as a textbook by instructors at the Joint Command,

Control, and Information Warfare School of the U.S. Joint Forces Staff College and involving IO experts from several countries, this book fills an important gap in the literature by analyzing under one cover the military, technological, and psychological aspects of information operations. The general reader will appreciate the examples taken from recent history that reflect the impact of IO on U.S. foreign policy, military operations, and government organization.

This book presents the current state of the art in Social Ecology as practiced by the Vienna School of Social Ecology, globally one of the main research groups in this field. As a significant contribution to the growing literature on interdisciplinary sustainability studies, the book introduces the purpose and nature of Social Ecology and then places the "Vienna School" within the broader context of socioecological and other interdisciplinary environmental approaches. The conceptual and methodological foundations of Social

Ecology are discussed in detail, allowing the reader to obtain a broad overview of current socioecological thinking. Issues covered include socio-metabolic transitions, socioecological approaches to land use, the relation between actor-centered and system approaches, a socioecological theory of labor and the importance of legacies, as conceived in Environmental History and in Long-Term Socio-Ecological Research. To underpin this overview empirically, the strengths of socioecological research are elucidated in cases of cutting-edge research, introducing a variety of themes the Vienna School has been

tackling empirically over the past years. Given how the field is presented – reflecting research carried out on different scales, reaching from local to global as well as from past to present and future – and due to the way the book is structured, it is suitable for classroom use, as a primer, and also as an overview of how Social Ecology evolved, right up to its current research frontiers.

'Forget the label "free trade agreement"'. The TPPA, under negotiation between New Zealand, the USA and ten other countries, is a direct assault on our right to decide our own future.'  
In this hard-hitting  
BWB Text, Professor

Jane Kelsey picks apart the current negotiations surrounding the proposed Trans-Pacific Partnership Agreement (TPPA) and comes to some disturbing conclusions. Such a treaty, she says in this new work, has little credible economic rationale but could have potentially dangerous effects on our ability to decide for ourselves how we address the economic, environmental, social and Treaty challenges of the twenty-first century. At a time of constitutional review, the secrecy surrounding the TPPA negotiations raises hard questions about the future shape of New Zealand.

How will continued proliferation of nuclear weapons change the global political order? This collection of essays comes to conclusions at odds with the conventional wisdom. Stephen Rosen and Barry Posen explore how nuclear proliferation may affect US incentives to confront regional aggression. Stephen Walt argues that regional allies will likely prove willing to stand with a strong and ready United States against nuclear-backed aggression. George Quester and Brad Roberts examine long-

term strategic objectives in responding to nuclear attack by a regional aggressor. Richard Betts highlights the potential for disastrous mistakes in moving toward and living in a world heavily populated with nuclear-armed states. Scott Sagan explains how the nuclear nonproliferation policies best suited to some states can spur proliferation by others. Caroline Ziemke shows how the analysis of a state's strategic personality can provide insights into why it might want nuclear weapons and how its policies may develop once it gets them. And, Victor Utgoff concludes that the United States seems more likely to intervene against regional aggression

when the aggressor has nuclear weapons than when it does not. [The Coming Crisis](#)

“A near-future layering of East and West, of religion and technology . . . and of love and its loss—all woven into an intriguing tapestry.”

—Diana Gabaldon, bestselling author of the *Outlander* series  
Winner of the Homer Award for Best Science Fiction Novel  
A renowned prima ballerina, Lucia del Mar is far more comfortable expressing herself through dance than with words. Shy and introverted, she spends

most of her spare time on her laptop. Still, Lucia’s job forces her out of her comfort zone, which is how she winds up at a White House reception where she meets Rashid al-Jazari, the wealthy CEO of a multinational corporation. Although attracted to him, Lucia can’t help but feel awkward and shrugs off their encounter as a one-time event. Not realizing he feels a similar attraction, she never imagines Rashid will seek out her performances; he is the last person she expects to see when her dance company travels to Italy. Their reunion takes an even more unexpected turn when they’re both drugged and kidnapped. Although they overcome their abductors, it leaves

them stranded in North Africa. For her own safety, Lucia agrees to marry Rashid, at least for the time being. As she recovers at his family compound in Morocco, reeling from their brush with danger, she struggles to fit into a culture she knows nothing about—and to deal with her growing feelings for Rashid. At the same time, at his secret office there, Rashid is developing a dramatic leap forward in artificial intelligence combined with virtual reality. He finds himself plunged into a fight for control of his work against powerful international forces, and caught in the middle, Lucia is swept into that battle . . . “A terrific novel, ripping a path from today’s headlines to

tomorrow’s realities.”

Launched in 1958, as the successor to the ubiquitous Ferguson

TE20, the Massey-Ferguson 35 was a product of the merger of Massey-Harris and Ferguson. It incorporated numerous improvements and new features and became massively popular worldwide. Its companion, the 65 model, was introduced shortly afterwards and was a larger tractor, offered with the revolutionary Multi Power system that gave 12 forward and four reverse gears. Durable and versatile, these tractors are still a practical proposition today, and even unrestored examples command high prices. Michael Thorne, author of Ferguson TE20 in Detail, continues the story as he describes the development of these models, the production versions

and their capabilities, options and extras, conversions, implements and their use today. Outstanding surviving examples are featured in some 80 photographs specially taken for this book, and there are approximately 120 accompanying archive illustrations.

This is one of the most remarkable Holocaust memoirs ever written. It is the story of a young man who endured the full brunt of Nazi horror. He lived to tell the tale not only of the Lodz ghetto and Auschwitz-Birkenau (where his parents perished in the gas chambers) but of a further three concentration camps - Althammer, Dora and Bergen-Belsen. He

survived all of it, but his brother was murdered, as were six million of his people. Abraham Biderman has written his book to keep a promise to his mother. 'Remember, remember what they did to us!' were her last words to him. In turn, he hopes that *The World of My Past* will serve as a legacy for future generations to learn about and remember what happened to humanity in the middle of the twentieth century. *The World of My Past* is a riveting personal testimony and a searing indictment of those who perpetrated and acquiesced in some of the most hideous events in human history. COMMENTS ON THE WORLD OF MY PAST'Unbearably

moving ... a powerful, touching and truthful account.'Barry Jones'Powerful and profoundly disturbing ... As do the accounts of such writers as Primo Levi, Elie Weisel and Samuel Pisar, so too The World of My Past overwhelms me with the tragedy and horror of it all.'Sir Zelman Cowen'A vivid, haunting testimony ... His eloquence, dignity and clarity shine through the torment of a journey that no-one must make again.'Ramona Koval'A work of immense power ... in all my reading, I know of few works that better bring that time to life.'Phillip Adams

EXTRACT FROM THE WORLD OF MY PAST

Staring at my mother, I thought that the years of suffering has not completely

eroded the beauty of her face. For the most part, however, my mind was in turmoil. I was in panic and fear. I could not believe - nor could I disbelieve - that within a few hours none of us would be amongst the living. What goes on in this world? Why must we die? My father stood near me, silent, with an empty expression on his face, staring aimlessly into space through the little window crossed with barbed wire. He looked tired. His face bore the marks of starvation and pain. The Polish peasants were out in the fields, and they greeted the train with festive smiles. It almost seemed as though they knew we were coming, as though they were expecting us. They had

certainly seen trains like this before. Some of them made hostile, offensive gestures at us. Their children were hopping about and clapping their hands with joy. To this day I wonder how they could. They knew who we were and where the Germans were taking us. They knew what would happen once we reached our destination. What sort of people could enjoy the sight of such a train? What sort of people enjoy the sight of a funeral? ...The trip was long and arduous as the death train, with a repetitious clatter of its wheels, sped into the dark, rhythmically seeming to warn us of our impending fate. After countless hours travelling in the never-ending night, we passed a little railway

station, unattended and scarcely lit. It looked unreal. A lonely kiosk with chocolate boxes on display looked like theatre props on a stage. A sign appeared in big black letters on a white oblong board with a black border: Auschwitz... ...There was a sudden squealing of metal against metal as the brakes went into action; and a banging of heavy steel as the buffers struck one another, bringing the train to an abrupt halt, throwing the entire cargo off balance once again. Turmoil and commotion. Exhausted, we fell one on top of the other. It was very dark and very silent outside. Fear filled my heart, causing the blood to rush to my head and hammer at

my temples. My senses sharpened, like an animal in the stockyard smelling blood and death. The wagon was filled with panic. Only lamenting and mourning broke the silence of the night.

This digital Short Cut provides a concise and supremely useful guide to the emerging trend of User Acceptance Testing (UAT). The ultimate goal of UAT is to validate that a system of products is of sufficient quality to be accepted by the users and, ultimately, the sponsors. This Short Cut is unique in that it views UAT through the concept that the user should be represented in every step of the software delivery lifecycle--including requirements, designs, testing, and maintenance--so that the user community is

prepared, and even eager, to accept the software once it is completed. Rob Cimperman offers an informal explanation of testing, software development, and project management to equip business testers with both theory and practical examples, without the overwhelming details often associated with books written for "professional" testers. Rather than simply explaining what to do, this resource is the only one that explains why and how to do it by addressing this market segment in simple, actionable language. Throughout the author's considerable experience coordinating UAT and guiding business testers, he has learned

precisely what testers do and do not intuitively understand about the software development process. UAT Defined informs the reader about the unfamiliar political landscape they will encounter. Giving the UAT team the tools they need to comprehend the process on their own saves the IT staff from having to explain test management from the beginning. The result is a practice that increases productivity and eliminates the costs associated with unnecessary mistakes, tedious rework, and avoidable delays.
