Math is an essential component of the interior design profession. Estimating and Costing for Interior Designers, Second Edition, teaches readers a logical process for calculating materials and estimating the costs of installed products based on their math calculations. Fully updated and revised, this book utilizes step-by-step examples and worksheets to simplify the math used in the interior design field. Sample problems and exercises take the calculations of quantities needed one step further to actually apply material and labor costs, to discover the installed costs of the specified products. Exercises are provided in introductory, intermediate, and advanced levels for all types of interior designers. Clear sections cover wall and ceiling treatments, window treatments, soft fabrications, upholstery, flooring, and cabinetry and countertops, making this book applicable to both commercial and residential design projects. New to This Edition -Key pedagogical features including: learning objectives, key terms, chapter summaries, professional tips, and glossary. -Student STUDIO materials including: calculation worksheets, schedules/cost worksheets, practice examples, and flashcards. -Robust Instructor Resources including: a revised instructor's guide, test questions, additional practice exercises and answers, PowerPoints lecture slides, and Excel worksheets.

This second edition is updated throughout and includes additional material on time management and numerous interviews with leading designers. Empowered by the step-by-step guidance in this book, interior designers will be able to establish prices and budgets that make their clients happy and their businesses profitable. Written by a designer and veteran expert on pricing, estimating, and budgeting systems, the book provides practical guidelines on how to value the cost of designing commercial or residential interiors, from the designer's creative input to the pricing of decorating products and procedures. The book shows how to determine a profitable and fair hourly rate, balance the client's budget with his or her wishes and needs, negotiate prices with suppliers and contractors, write realistic estimates and clear proposals, manage budgets for projects of all sizes and types, and position the firm's brand in relation to its practices. Interviews with experienced interior designers, case studies, and sidebars highlight professional pitfalls and how to master them, from daily crisis management and self-organization to finding the perfect office manager.

Building Information Modeling (BIM) is the process of generating and managing building data during a building's lifecycle. Today, more and more architectural firms have adopted BIM software and processes because it allows them to produce measurably more work of better quality, in shorter periods of time. Featuring case studies of firms of all sizes, this practical resource shows professionals how to implement BIM in the building industry

around the globe. The book explains how BIM allows the data collected to plan, design and build projects to continue to be used and added to during the occupied life of the building. Readers also become knowledgeable about the changing role of architects within the building industry as they embed BIM in their workflow. From interoperability and open standards, knowledge sharing, and gathering data, to the BIM software suite, implementation planning, and project workflow, this authoritative volume provides a thorough understanding of key aspects of BIM that practitioners need to understand.

Estimating for Interior Designers

Bloomsbury Publishing USA

The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the physical fit, or interface, between the human body and the various components of interior space. *Human Dimension and Interior Space* is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on human body size, organized by age and percentile groupings. Also included is data relative to the range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from residential and commercial to recreational and institutional, and all dimensions include metric conversions.

In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and Zelnik have devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With *Human Dimension and Interior Space*, these standards are now accessible to all designers of interior environments.
