Emergency Medical Responder Exam Review Staywell Company

This New American Red Cross CPR/AED for the Professional Rescuer Participant's Manual and course reflect changes based on the 2005 Consensus on Science for CPR and Emergency Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid. Changes to this program and manual include simplifications to

many of the CPR skill sequences, which helps improve retention. There have also been changes to help improve the quality of CPR. The integration of CPR skills into the operation of AEDs had changed to help improve survival from sudden cardiac arrest. Professional rescuers are now trained to use AEDs on adults and children. Information has been updated and added to this program to help professional rescuers administer epinephrine, aspirin and fixed-flow-rate oxygen. The skills learned in this course include adult, child and infant rescue breathing, conscious and unconscious choking, CPR, two-rescuer CPR and adult and child AED. Additional training can be added to this course including bloodborne pathogens training and emergency oxygen administration. While the skills and knowledge that professional

rescuers use are increasing, this training will help you meet your most important responsibility as a professional rescuer- the responsibility to save lives.

Community-Based Psychological First Aid: A Practical Guide to Helping Individuals and Communities during Difficult Times presents a practical method for helping those in need in difficult times. No advanced training in psychology is needed to use it. Injuries from disasters, terrorist events, and civil unrest are not just physical. These events also cause psychological trauma that can do lasting damage. Psychological First Aid (PFA) draws on human resilience and aims to reduce stress systems and help those affected recover. It is not professional psychotherapy, and those providing this kind of aid do not need a degree to help. Gerard Jacobs has developed this community-based method of delivering PFA over 20 years and has taught it in over 30 countries. Along with the easy-to-follow method, Jacobs includes examples of how this works in action in different situations, and presents scenarios to practice. Unique in its approach of community engagement to train community members to help each other, this guide is an excellent resource for local emergency managers to engage in whole community emergency management. Presents a proven method for helping to alleviate the mental health effects of disasters, terrorist attacks, civil unrest, and other community stressors Offers a community-based model developed and taught by an international expert for over 20 years, requiring no advanced training or education in psychology to use Provides techniques that are adaptable to individual communities or cultures Outlines practices for self-care while helping others to prevent burnout Includes case studies, scenarios, and key terms to help facilitate community training

The Pocket Book is for use by doctors nurses and other health workers who are responsible for the care of young children at the first level referral hospitals. This second edition is based on evidence from several WHO updated and published clinical guidelines. It is for use in both inpatient and outpatient care in small hospitals with basic laboratory facilities and essential medicines. In some settings these guidelines can be used in any facilities where sick children are admitted for inpatient care. The Pocket Book is one of a series of documents and tools that support the Integrated Management.
