This book offers important insights into the complex nature of educational accountability and its role in supporting school improvement. By developing two key concepts – educational accountability and American federalism – the book highlights various types of accountability that take place in different

institutional settings. By moving beyond the long-standing, test-based, administrative approach to accountability, the author demonstrates how professional, market, and political accountability affect teaching, learning, and educational policymaking. The book examines four accountability types: administrative accountability, professional accountability, market accountability, and political accountability. The volume questions why these accountability types vary in their development and use across the country, and considers how American federalism – national, state, and local – provides different political arenas with variation in ideas, interests, and institutions that prompt different policymaking approaches. The book concludes with a two-tier proposal for internal accountability organized around teacher professionalism and external accountability combining elements of school choice and public deliberation. This volume will be important reading for scholars and researchers in Federalism, Education Policy, and Public Administration. It will also be beneficial reading for policymakers, think tanks, and community organizations.

This book challenges the World Medical Association's (WMA) International Code of Ethics statement in 2004, which declared that 'medical ethics in armed conflict is identical to medical ethics in times of peace'. This is achieved by examining the professional, ethical, and legal conflicts in British Military healthcare practice that occur in three distinct military environments. These are (i) the battlefield, (ii) the operational environment and (iii) the non-operational environment. As this conflict is exacerbated by the need to achieve Operational Effectiveness, this book also explores the dual loyalty conflict that Military Health Care Professionals (MHCPs) encounter between following military orders and professional codes of practice. The method used to challenge the WMA's statement and explore these conflicts is the use of real-life problem-solving vignettes, which mirror actual ethical and professional conflicts and dilemmas that may occur in the three environments. The areas of law analysed similarly reflect the difficulties that MHCPs face when caring for the sick and wounded in violent locations when under attack. In particular, the book questions whether it is right for a MHCP to owe their patients a duty of care in hostile environments. This leads on to questioning if any MHCP could be protected by combat immunity where no duty of care is owed to fellow soldiers in the battlefield. The book also questions whether the standard of care should be variable in hostile environments. It also explores the dual loyalty conflict of a wounded senior officer refusing treatment from a junior officer. In addition, it examines the difficulties of a doctor maintaining patient confidentiality when a soldier refuses treatment for a psychological injury but wishes to redeploy to the battlefield. The book successfully challenges the WMA's statement. It also concludes by suggesting that neither a military-focused approach nor a professional healthcare-focused approach towards military healthcare is the best way to solve the dual loyalty conflict.
