## LEXI CRUZ

*Essential Psychiatry for the Aesthetic Practitioner* Springer Nature

Part of the best-selling Operative Techniques series, Operative Techniques in Plastic Surgery provides superbly illustrated, authoritative guidance on operative techniques along with a thorough understanding of how to select the best procedure, how to avoid complications and what outcomes to expect. This stand-alone book offers focused, easy-to-follow coverage of the art of facial aesthetic surgery, all taken directly from the larger text. It covers the authors' preferred techniques for nearly all facial aesthetic operations that are in current use, and is ideal for residents and physicians in daily practice.

*Master Techniques in Blepharoplasty and Periorbital Rejuvenation* John Wiley & Sons

Considerable progress has been made in various fields of oculoplastic surgery, e.g. the development of endoscopic transcanalicular as well as endonasal minimal invasive techniques in lacrimal surgery, the use of muscle pedunculated scleral flaps to improve implant motility without pegging.

*Angiogenesis Assays* John Wiley & Sons

This clinical atlas and CD combination provides the ideal educational mix for learning the technique for rhytidectomy. Heavily illustrated throughout, the volume reflects Dr. Hamra's vast experience in aesthetic facial surgery. The book documents photographically and artistically the operative steps for this extensive face lift as well as techniques for aesthetic improvements to the chin, neck, nose, and skin. Postoperative results for each of these procedures are demonstrated, with special insights into the tips and tricks that help Dr. Hamra achieve the most aesthetic appearance for his patients. The CD-ROM, winner of the 1991 ASAPS Award for Best Video, is sold with the book. Computer-generated art combined with operative footage presents the composite rhytidectomy procedure in its entirety.

*Plastic and Reconstructive Surgery* Springer

*Eyelid & Periorbital Surgery* offers expansive coverage of aesthetic and reconstructive procedures in oculoplastic surgery. Oculoplastic and plastic surgeons combine their talents in this unique two-volume clinical resource that features comprehensive guidance for solving both common and rare eyelid and periorbital problems. With more than 2,900 photos and color illustrations, this edition has 26 rewritten first edition chapters and expands on an additional 13 new chapters, including topics ranging from nonsurgical periorbital rejuvenation to male blepharoplasty. Best of all, there are more than 30 new surgical videos demonstrating the latest surgical techniques. Also included is a complimentary eBook. Divided into 5 sections, the book begins by covering the fundamentals including periorbital and eyelid anatomy, eyelid function, innervation, biomechanics, and tissue grafts. The following section discusses aesthetic surgery including procedures such as brow lift, upper and lower blepharoplasty, midface lift, treatment of malar bags and festoons, lateral canthal dysfunction, and management of chemosis. A new section has been added on aesthetic nonsurgical state-of-the-art periorbital treatments with an update on injectable fillers, botulinum toxin injections, and fat grafting. The reconstructive surgery section covers ptosis surgery, upper and lower eyelid reconstruction, entropion and ectropion reconstruction, surgery for facial paralysis, malignant eyelid tumors, Graves' disease, and the treatment of pediatric patients. The new final section covers orbital and lacrimal surgery including blowout fracture of the orbital floor, neuroophthalmologic injuries, evisceration and enucleation, late repair of orbital fractures, and management of the lacrimal system. Step-by-step descriptions and detailed videos provide a wide variety of tips, clinical pearls, and personal insights from the authors making this an invaluable resource for surgeons interested in the topic.

*Cosmetic Medicine and Surgery* Thieme Medical Publishers

This title in the Rapid Diagnosis in Ophthalmology Series presents a wealth of full-color images - along with differential diagnoses - in side-by-side page layouts to assist you in identifying a full range of disorders. A templated format expedites access to the guidance you need to diagnose the most common conditions - from simple to complex - encountered in practice. Coverage of the key features, diagnostic criteria, and treatment options for Graves Disease, blepharoplasty, fractures, and eyelid tumors equips you with the latest guidance. Hundreds of full-color images present conditions as they present in real life. Common diagnostic pitfalls discuss what to look out for when making a difficult diagnosis. A templated, color-coded layout and differential diagnosis boxes for each condition help you make quick, accurate clinical decisions. A focus on the most common conditions encountered in practice allows you to efficiently formulate treatment plans and referrals. SERIES EDITORS: Jay S. Duker, MD, Director, New England Eye Center, Vitreoretinal Diseases and Surgery Service; Director, Pediatric Retinal Referral Center, Uveitis & Immunology Service; Professor and Chair of Ophthalmology, Tufts University School of Medicine, Boston, MA and Marian S. Macsai, MD, Chief, Division of Ophthalmology, Evanston Northwestern Healthcare; Professor and Vice-Chair of the Department of Ophthalmology, Feinberg School of Medicine, Northwestern University, MI

*Cosmetic Oculoplastic Surgery* CRC Press LLC

In the innovative field of cosmetic dermatology, the range of products and methods available to patients is expanding all the time. Prominent among these are facial fillers, which, when injected into and beneath the skin, help alleviate wrinkles and improve smoothness. However, the many fillers on offer have varying characteristics and effects, and practitioners must be properly trained in order to administer them safely and successfully. *Injectable Fillers* offers those performing these popular procedures an in-depth and far-reaching survey of current best practices, with a strong emphasis on safety. Covering everything from the science behind facial fillers to their appropriate means of application, the book places each product in context, demonstrating the pros and cons of the expanding range of hyaluronic acids and calcium hydroxylapatite microspheres, and exploring injectable submental fat reduction with sodium deoxycholate. This second edition broadens the scope of discussion to also include chin, mandible, temple, nose, brow, and forehead injections, as well as the use of cannulas as an alternative to needles.

*Cosmetic Injection Techniques* Saunders

This book/DVD set is a thoroughly illustrated "how-to" guide to facial fat transfer, a new facial rejuvenation procedure that allows the surgeon to sculpt the face and restore it to its natural beauty. Fat is harvested from fattier areas of the body through a suction technique and injected into the face with a small cannula. The fat transferred becomes incorporated as living tissue and the results are extremely long lasting. The book guides readers through this procedure with easy-to-follow instructions and more than 200 full-color step-by-step illustrations. Two DVDs accompanying the book contain videos demonstrating the procedure and pitfalls.

*Oculoplastics and Orbit* Elsevier Health Sciences

Aesthetic rejuvenation now encompasses so many topics that practitioners in one area may feel out of touch with developments in other areas in the same field. With over 70 chapters, over 1200 figures (many in full color), over 80 tables, and over 20 videos, from an international list of contributors, under an eminent team of editors, *Cosmetic Medicine & Surgery* is a comprehensive and authoritative resource. It covers a wide spectrum of topics including the fundamental aspects, cosmetic aspects, minimally invasive surgery, the aesthetic facelift, and many others in this most high-profile of medical and surgical specialties. Print Versions of this book also include access to the ebook version.

*Pediatric Oculoplastic Surgery* E2e

The knowledge of anatomy simplifies the injection of fillers, fat and threads. By the 5 layers

anatomy-based protocol, it is easier to do medical treatments preserving the nerves and the vessels. The step by step approach is the best prevention of disastrous complications such as necrosis or blindness.

#### Surgery of the Eyelid, Lacrimal System, and Orbit Aesthetic Quality

Highly Commended by the BMA Medical Book Awards for Surgical Specialties! Physical aging of the face is a multifactorial process that affects a crucial aspect of aesthetics: emotional expression. Centrifacial Rejuvenation examines the detrimental effects of volume loss and reduced skin surface quality in the aging process of the face and the restorative power of volume replacement. The fat grafting techniques described in this text will help plastic, aesthetic, and maxillofacial surgeons obtain a more natural facial rejuvenation result with longer stability than many other available techniques. This comprehensive resource describes cutting-edge fat harvesting and injection techniques as well as innovative methods of preparing the fat tissue to obtain a better survival of the fat particles, eliminate the need for overcorrection, reduce the downtime and morbidity, and avoid complications. Surgeons can use Centrifacial Rejuvenation as a guide to move their practice forward with the following unique procedures: Augmentation blepharoplasty to combat periorbital aging Sharp Needle Intradermal Fat (SNIF) injection as a permanent intradermal filler Nanofat grafting through a specialized emulsification process Unique approaches to soft filler and toxin injection for precise and reliable results Microbotox as a novel method to eliminate rhytids without total muscle paralysis Chemical peels with advanced solution preparation techniques for greater control over depth and strength of the results In addition, hundreds of color photographs demonstrating the results of these techniques and beautifully detailed illustrations enhance the reader's understanding of the procedures and their benefits. Purchase of this text also includes access to a full library of videos detailing the described procedures. Centrifacial Rejuvenation is an essential volume for today's modern plastic surgeon to achieve superior results!

#### *Master Techniques in Facial Rejuvenation* CRC Press

The difference in the shapes of facial structures and their relationship to one another determines the unique and distinct appearance of each individual. This anatomic information is critical to diagnosing changes in facial topography that occur with age and in determining the best approach for augmenting and rejuvenating the aging face. Facial Topography: Clinical Anatomy of the Face provides a critical roadmap for navigating the underlying anatomy of the face. It is the first work of its type that uses cadaver dissections paired with detailed medical illustrations to depict the soft tissue surface landmarks of the face—shapes, contours, creases, and lines. This beautifully illustrated semi-atlas is packed with clinical information to help improve surgical outcomes. The book places particular emphasis on describing surface landmarks to help predict the location of deeper structures. This knowledge increases the safety of any facial procedure, because the surgeon knows the course and location of blood vessels, muscles, and nerves. The book includes advice on determining the best placement of injectables to achieve a predictable and aesthetic result and to avoid complications, and also helps surgeons understand the ideal placement of fillers for facial augmentation. In addition, the basic dissections provide essential information for all residents and practitioners operating in the face. Anatomic tenets are described that can be applied to any anatomic region and key clinical points are highlighted throughout. A supplemental DVD includes video demonstrations of dissections and other clinical applications in each anatomic area of the face.

#### **Injectable Fillers** Little, Brown Medical Division

The injection of cosmetic neurotoxins and fillers is a multi-billion dollar industry in which facial plastic surgeons, plastic surgeons, dermatologists, oculoplastic surgeons, and paraprofessionals in the U.S. perform more than seven million injections annually. Cosmetic Injection Techniques and the videos that accompany it provide all medical professionals in the field (from beginners to experienced injectors) with practical information on how to properly administer neurotoxin and filler injections for conditions such as lower eyelid roll, nasal flare, platysmal banding, marionette lines, glabellar frown lines, and much more. Key Features: Full color, detailed illustrations describe key anatomical landmarks and identify exact injection locations Online access to videos narrated by Dr. Kontis that demonstrate multiple injection techniques A unique rating system for each procedure, enabling injectors to perform techniques appropriate to their skill level Every commonly performed cosmetic injection procedure is covered, giving readers a comprehensive guide on how to safely and effectively perform injections This easy-to-use manual gives facial plastic surgeons, plastic surgeons, dermatologists, oculoplastic surgeons and other medical professionals authoritative, concise information on the anatomy, techniques, precautions, complications, and post-treatment care involved in the administration of injections of cosmetic neurotoxins and fillers.

#### Anatomy & volumising injections Elsevier Health Sciences

ESSENTIAL PSYCHIATRY FOR THE AESTHETIC PRACTITIONER Aesthetic practice requires an understanding of human psychology, yet professionals across cosmetic medicine and related fields receive no formal training in identifying and managing psychological conditions. Essential Psychiatry for the Aesthetic Practitioner provides concise yet comprehensive guidance on approaching patient assessment, identifying common psychiatric diseases, and managing challenging situations in cosmetic practice. This much-needed guide brings together contributions by dermatologists, plastic surgeons, psychiatrists, psychologists, and other experts to help practitioners understand the role of psychology in cosmetic practice and improve interpersonal relations with their patients. Assuming no previous background knowledge in psychiatry, the text provides cosmetic practitioners of all training and experience levels with clear guidance, real-world advice, and effective psychological tools to assist their practice. Through common clinical scenarios, readers learn to determine if a patient is a good candidate for a cosmetic procedure, enhance the patient experience, deal with difficult personalities in the cosmetic clinic, recognize obsessive compulsive and body dysmorphic disorders, and more. Describes how to use psychologically informed approaches and treatments for aesthetic patients Features easy-to-use psychological tools such as motivational interviewing, progressive muscle relaxation, guided imagery, and acceptance and commitment therapy Includes extensive references and practical tips for understanding the psychological implications of cosmetic treatments Covers cosmetic consultations for female, male, and transgender patients Discusses the history and psychology of beauty as well as the role of cosmetics and cosmeceuticals Emphasizes the importance of screening for common psychological comorbidities Addresses the impact of social media on self-image and its role in a growing crisis in beauty and appearance Highlights the need to develop new guidelines to treat rapidly evolving patient populations Explores how gender fluidity and variations in ethnicity are changing the approaches to aesthetic patients Essential Psychiatry for the Aesthetic Practitioner is required reading for dermatologists, plastic surgeons, cosmetic doctors, dentists, nurses, and physician assistants and all other professionals working in aesthetic medicine.

#### *Oculoplastics and Orbit* Charles C. Thomas Publisher

Facial rejuvenation with fillers over the last twenty years, leading to the coming of a new era with hyaluronic acid. The first book in the Master Collection addressed indications and technique for the injection of botulinum toxin. This new work extends our work on facial rejuvenation to the field of volumising injections. The topic is of great importance given that the fight against aging is not just a trivial question of fashion but is essential to an individual's well-being and social relationships. Major progress in the techniques of facial rejuvenation in the last decade This is an opportune moment for such a review insofar as there has been major progress in the techniques of facial rejuvenation in

the last decade. The broad range of different resources available to us today means that we now often have extensive choice when making our therapeutic decisions. However, none of us would want to cross the ill-defined line between pleasing, natural, balanced rejuvenation and a radical change in facial equilibrium. Medicine and aesthetic surgery are complementary disciplines, both developing quickly but not in competition. The indications for one or the other must always be followed with utmost rigour. The road to excellent outcomes passes by combining the various different methods available to us and by acting together with other experts. All experts agree on the efficacy of hyaluronic acid From the first timid filling in of wrinkles barely twenty years ago, through focused filling treatments and ultimately global injection of the whole face, the journey has been long and sometimes difficult but always full of lessons. Many different products have been used. Some turned out to have a short lifetime and others had adverse effects, serious ones in some cases. Finally, one compound emerged from the pack and now all experts agree on its efficacy; that compound is hyaluronic acid. Philippe Garcia, MD Forewords FOREWORDS TO ANATOMY AND VOLUMISING INJECTIONS Presentation of our approach necessary to determine the relationships between various anatomical planes into which we inject fillers. The authors of this book have chosen to review the basic anatomy By performing serial dissections plane by plane, we have identified safe areas as well as potential hazards. This approach seemed necessary to determine the relationships between the various anatomical planes into which inject fillers. An essential part of this approach is detailed analysis of the different fat compartments which play such an important part in age-related changes to the face. Our work was completed by the dissection of muscles and septa, as well as the identification of their relationship with the fat compartments. These structures are particularly important when it comes to treatment of the infraorbital region and the mandibular line. Therefore, facial aging can no longer be exclusively attributed to the consequences of slippage of the various planes under the influence of gravity, as used to be believed. Process of facial aging is far more complex It is now obvious that the process of facial aging is far more complex. It is even generally accepted now that downward displacements of the fat compartments in the face are controlled by a series of different septa and other ligaments (both false and true) to which they are attached. Moreover, it is also likely that these fat compartments change with time by shrinking and expanding. In the same spirit, what used to be seen as distension of the tissue associated with the muscles of the face and neck could sometimes be a muscular contracture. Probing the exact mechanisms underlying facial aging brings us into a world rich in surprises. And experts from all fields have not finished surprising us with their imagination and enthusiasm. Philippe Garcia,

#### **Centrifacial Rejuvenation** John Wiley & Sons

Soft Tissue Augmentation, 3rd Edition helps you make optimal use of these techniques and provide the optimum results your patients expect. Drs. Alistair and Jean Carruthers provide you with evidence-based, procedural how-to's and step-by-step advice on proper techniques, pitfalls, and tricks of the trade, equipping you to successfully incorporate the very latest procedures into your busy practice! Consult this title on your favorite e-reader, conduct rapid searches, and adjust font sizes for optimal readability. Compatible with Kindle®, nook®, and other popular devices. Offer your patients the best care and avoid pitfalls. Evidence-based findings and practical tips equip you with the knowledge you need to recommend and discuss the most effective treatment options with your patients. Proceed confidently with current, to-the-point guidance on the cosmetic use of traditional and new fillers edited by pioneers in the field, Drs. Jean and Alastair Carruthers. Expand your repertoire and refine your skills with a wealth of color illustrations, photographs, and procedural videos (including lip augmentation and treatment of hands and feet) depicting cases as they appear in practice. See how non-invasive cosmetic procedures apply to real-life situations with new case studies and pearls throughout. Stay on top of cutting-edge techniques and topics including darker skin and fillers; platelet rich plasma; and tower technique of filler injection as well as new and novel non-permanent fillers including Elastin and Soft Tissue Augmentation; and a combination of Carboxymethyl Cellulose (CMC) and Polyethylene Oxide (PEO). Take advantage of a dynamic and up-to-date focus on the latest soft tissue techniques with 25 new chapters and the unmatched guidance of expert contributors - many new to this edition. Browse the fully searchable text online at Expert Consult, along with expanded video content and downloadable images.

#### Non-Surgical Skin Tightening and Lifting Springer

Comprehensive coverage, multidisciplinary guidance, and step-by-step instruction both in print and on video help you choose the best approach and get the best results for any facial rejuvenation challenge. Master Techniques in Facial Rejuvenation, 2nd Edition, by Drs. Babak Azizzadeh, Mark Murphy, Calvin Johnson, Guy Massry, and Rebecca Fitzgerald, presents multiple facial rejuvenation techniques by experts in the fields of plastic surgery, facial plastic surgery, otolaryngology, oculoplastic surgery and dermatology. Competing and complementary techniques focus on all areas of the face, providing a balanced and systematic approach to this fast-growing field. Presents step-by-step, full-color depictions of the authors' surgical techniques, with emphasis on minimally invasive surgery, recent trends, and adjunctive procedures. Addresses facial shape and proportions with injectable agents in youth and age. Provides multiple viewpoints on advanced and time-tested techniques. Features video instruction on ptosis repair blepharoplasty, mentoplasty, non-surgical brow and eyelid rejuvenation, and more. Features expanded coverage of non-invasive procedures such as Botulinum toxin and fillers, neromodulators, tightening devices, and panfacial nonsurgical rejuvenation, plus newly updated information on face lifts. Includes all-new chapters on non-surgical brow and eyelid rejuvenation, ptosis repair and blepharoplasty, deep plane rhytidectomy modifications, and orthognathic aesthetic facial surgery. Expert Consult eBook version included with purchase. This enhanced eBook experience allows you to search all of the text, figures, Q&As, and references from the book on a variety of devices.

#### **Textbook of Plastic and Reconstructive Surgery** JP Medical Ltd

This book offers surgeons the most up-to-date information related to non-surgical techniques specific to periorbital rejuvenation. This easy-to-use reference guide is for ophthalmologists, oculoplastic surgeons, dermatologists, plastic surgeons, maxillofacial and plastic surgery residents, as well as ENT facial plastic fellows. Complete with videos of specific techniques to better inform surgeons about these evolving procedures, Nonsurgical Peri-orbital Rejuvenation teaches the reader how to measure predictable outcomes when deciding to approach the periorbital area. Topics covered include neurotoxins, peels, lasers, fillers, and skinceuticals.

#### **Non-Surgical Rejuvenation of Asian Faces** Springer Science & Business Media

The 8 recurring volumes of the "Essentials in Ophthalmology" series cover the most recent developments in one of eight subspecialties in Ophthalmology. With four volumes published per year, each subspecialty is newly visited every 24 months, with a distinct focus on recent developments. By bridging the gap between original research and medical textbooks, the transfer of this developing knowledge into daily practice is greatly enhanced.

#### **Short-scar Face Lift** Springer Science & Business Media

The recognized expert contributing authors provide readers with trusted insight into new and advanced surgical techniques. The text is intuitively organized into functional sections including eyelid malpositions, eyelid reconstruction, lacrimal surgery, orbital surgery, and aesthetic facial surgery.

#### **ANATOMY & LIP ENHANCEMENT** Karger Medical and Scientific Publishers

Clearly written descriptive text combines with extraordinary illustration drawn especially for this book to lead the reader through anatomy, preoperative preparation, specific techniques, and unique

problems posed by the eyelids and brows. A special chapter on "pearls and pitfalls," written by Dr. Wolford, provides unique insight gleaned from the well-known surgeon's unparalleled clinical experience.
