The convergence of technologies and

emergence of interdisciplinary and transdisciplinary modus of knowledge production justify the need for research that explores the disinterestedness or interconnectivity of the information science disciplines. The quantum leap in knowledge production, increasing demand for information and knowledge, changing information needs, information governance, and proliferation of digital technologies in the era of ubiquitous digital technologies justify research that employs a holistic approach in x-raying the challenges of managing information in an increasingly knowledge- and technology-driven dispensation. The changing nature of knowledge production for sustainable development, along with trends and theory for enhanced knowledge coordination, deserve focus in current times. The Handbook of Research on Records and Information Management Strategies for Enhanced Knowledge Coordination draws input from experts involved in records management, information science, library science, memory, and digital technology, creating a vanguard compendium of novel trends and praxis. While highlighting a vast array

of topics under the scope of library science, information science, knowledge transfer, records management, and more, this book is ideally designed for knowledge and information managers, library and information science schools, policymakers, practitioners, stakeholders, administrators, researchers, academicians, and students interested in records and information management.

ECG in Medical Practice Springer Nature Examining street vending as a global, urban, and informalized practice found both in the Global North and Global South, this volume presents contributions from

international scholars working in cities as diverse as Berlin, Dhaka, New York City, Los Angeles, Calcutta, Rio de Janeiro, and Mexico City. The aim of this global approach is to repudiate the assumption that street vending is usually carried out in the Southern hemisphere and to reveal how it also represents an essential—and constantly growing—economic practice in urban centers of the Global North. Although street vending activities vary due to local specificities, this anthology illustrates how these urban practices can also reveal global ties and developments.

Neurosurgery and Global Health

Frontiers Media SA

This book is a combination of ideas and experiences from over 100 dedicated and brilliant neurosurgeons around the world. Their common goal is to provide data for a deeper understanding of the multi-faceted aspects of neurosurgery and, by doing so, to better serve patients across the globe. Scientific curiosity, deep dedication, incredible work ethics, entrepreneurship, and creativity are the common traits among all neurosurgeons, and not the exception. By allowing readers to see the field of neurosurgery from the

perspectives of surgeons spanning five continents, this book serves to provide multiple, diverse viewpoints and to build a foundation for future collaborations. The book's 24 chapters are organized into 3 parts. Part I provides the reader with an overview of the role of neurosurgery in worldwide health care, its evolution over the past decades, the current state and future directions of each neurosurgical subspecialty across the five continents. Over the years, the overarching goal for neurosurgeons has been to develop new, more effective and high-end solutions for complex diseases and to provide access to neurosurgical services for all patients. Part II discusses the differences and similarities of neurosurgery education and training across the globe, providing a snapshot of how new tools, technology, and paradigms reduce inequality and increase access to neurosurgical education. Educational accomplishments and challenges still present for the in different regions of the world are reviewed. Part III focuses on economic aspects influencing neurosurgery globally, including how to make efficient decisions in the face of scarcity, yet demand. The authors provide

theories, models, and tools helpful to apply when planning to allocate resources, not just financial, but also human and intellectual. A deeper understanding of economics does not necessarily provide the answer to the problem; rather it provides the tools to find an answer, or, ideally, multiple possible solutions. Neurosurgery and Global Health is the first comprehensive guide to the role of neurosurgery in the global health care sphere, providing an in-depth compendium about the understanding of the neurosurgical role within global health, its efforts in the education of tomorrow's workforce, and the economic aspects driving the field.

This book presents a new approach to understanding the history and practice of cognitive-behavior therapy by presenting country profiles in 38 countries located around the world. The objectives of this edited volume are to provide a broad understanding of the practice of CBT internationally as well as country specific practices that will provide researchers and practitioners with important information for consideration in the application of CBT. The book begins with an introductory chapter by the editors that discusses the history of CBT and the efforts to globalize and disseminate the science and practice of CBT as well as the unique cultural and international variables. The subsequent chapters offer detailed country profiles of the history and practice of CBT from around the globe. More specifically, chapters will provide an overview of the

country, a history of psychotherapy in the country, current regulations regarding psychotherapy provision, professional and cognitive behavior therapy organizations, training opportunities/programs in CBT, populations most frequently worked with using CBT in the country, the use and adaptation of CBT, the research on CBT in the country, and CBT with special populations (children, immigrants, HIV+, etc). Many of the nations represented are the most populous and influential ones in their respective regions where CBT has been incorporated into psychotherapy training and practice. Taken as a whole, the countries are quite diverse in terms of sociocultural, economic, and political conditions and the impact of these variables on the practice of CBT in the country will be discussed. The final chapter of the volume offers a summary of the patterns of practice, integrating the main findings and challenges and discussing them within a global context. A discussion of the vision for next steps in the globalization of CBT concludes the book.

This book presents contributions from leading international experts in the field of nephrology. Each chapter is independent and discusses nephrology in the author's country, including the history of nephrology development, kidney disease epidemiology, clinical nephrology, dialysis practice in acute and chronic renal failure settings (hemodialysis, hemodiafiltration, peritoneal dialysis), pediatric nephrology, and kidney transplantation. In addition, the book covers topics such as the job market for nephrologists, reimbursement, nephrology education, and the number of professionals in the private and public sectors. With 53 chapters and more than 300 authors from all continents offering a unique perspective on nephrology practice, it provides a much-needed

information source for nephrologists around the globe. The reader will be able to travel through "Nephrology Worldwide", a pleasant reading experience with not only relevant information and updated data, but also a comprehensive look at the history, countries' peculiarities, and a critical analysis of the scenario of nephrology and renal replacement therapy. A valuable resource for healthcare professionals and other stakeholders interested in learning about the status quo of Nephrology Worldwide. "Both the failings and the successes are outlined in a way that should make this book a compelling read, not just for the well-informed renal physician, but also for planners and policy makers whose thinking and actions are integral to the way we practice medicine." - Sir Peter J. Ratcliffe, Nephrologist and 2019 Nobel Prize Winner More information on the Nephrology Worldwide initiative can be found at www.nephrologyworldwide.com.

The past century has been an exciting era

for the Bengalis in Malaysia attempting to preserve our identity and cultural heritage. However with the dilution of the community the radar for the coming years is misty. In the course of our efforts to uphold our identity and provide services to the public and be counted, we have not lost sight of our primary professional responsibility as doctors. Many have contributed towards the advancement of the profession by actively participating in research as well as providing financial grants. It is an opportune time to write this book. Our identity might be totally lost in the next 100 years except for the imposing edifice of Bengal House in Port Dickson, Negri Sembilan to bear testimony to the once thriving, vibrant proud Bengali community. The publication would be collecting dust and cobwebs and would be useful only to historians possibly excavating into our possible extinct past. Since commencing this book, two very prominent senior members have passed away, and it is most unfortunate that they have not seen this humble effort. We live in a global world transcending geographical boundaries and preservation of the last vestiges of our heritage should

be the responsibility of each and every one of us. The objectives of undertaking this Herculean task which hopefully have been fulfilled were an attempt to: Compile a list of Bengali doctors since their first arrival more than 100 years ago in what was then Malaya together with the subsequent 2nd & 3rd generation doctors born here. Some names might have been left out inadvertently for which sincere apologies are extended while a handful had not responded to repeated efforts to contact them or their next of kin. Explore the reasons for their migration. Many who were from the same district of East Bengal as Rai Bahadur Dr Sarojininath Bardhans and were related to him through his marriages were probably influenced by his success. Some arrived to avoid political persecutions. Global conditions such as World Wars I & II and the Great Depression of the 1930s obviously played an important part in the decision making process. The Post World War II years witnessed the return of local doctors whose studies were interrupted and a couple had harrowing experiences to narrate. Some contract doctors were also recruited directly by private local clinics.

Highlight the decades of the 50&60s which could be rightly considered as the golden era for the Bengali doctors. There were insufficient numbers of local graduates to fill the posts as most of the Chinese doctors went into the vast lucrative private sector while very few Malays had taken up Medicine. Although a large number had applied from Bengal, only about 35-40 doctors including a few with post graduate qualifications were recruited. Some climbed up the ranks and became senior administrative officers, appointed not on the basis of availability but because of their capability and proven track records. In the 1960s, the Medical Faculty of University of Malaya was established in Kuala Lumpur and some Calcutta graduates with post graduate qualifications from the United Kingdom were offered key posts to help jump start certain disciplines. This was an excellent testimony of the academic standards of Calcutta University graduates. These two decades also witnessed the successes of the 2nd generation Bengalis with a couple completing their post graduate medical studies in double-quick time. The first Malaysian Radiologist to start

Angiographic studies and to be awarded a neuro-vascular fellowship in Sweden in 1968/69 was a Bengali. In view of the limited number of super scale posts, many however were given glorified titles of State Physicians or Surgeons despite being only Clinical Specialists! Reiterate the contributions of Bengali doctors towards the Malayanisation of the medical and health services in the two states of Sabah & Sarawak in early 1970s. The efforts of Dr. Rabindranath Roy in unifying

 Cultural Sociology of Mental Illness: An A to Z Guide looks at recent reports that suggest an astonishing rise in mental illness and considers such questions as: Are there truly more mentally ill people now or are there just more people being diagnosed and treated? What are the roles of economics and the pharmacological industry in this controversy? At the core of what is going on with mental illness in America and around the world, the editors suggest, is cultural sociology: How differing cultures treat mental illness and, in turn, how mental health patients are

affected by the culture. In this illuminating multidisciplinary reference, expert scholars explore the culture of mental illness from the non-clinical perspectives of sociology, history, psychology, epidemiology, economics, public health policy, and finally, the mental health patients themselves. Key themes include Cultural Comparisons of Mental Health Disorders; Cultural Sociology of Mental Illness Around the World; Economics; Epidemiology; Mental Health Practitioners; Non-Drug Treatments; Patient, the Psychiatry, and Psychology; Psychiatry and Space; Psychopharmacology; Public Policy; Social History; and Sociology. Key Features This two-volume A-Z work, available in both print and electronic formats, includes close to 400 articles by renowned experts in their respective fields. An Introduction, a thematic Reader's Guide, a Glossary, and a Resource Guide to Key Books, Journals, and Associations and their web sites enhance this invaluable reference. A chronology places the cultural sociology of mental illness in historical context. 150 photos bring concepts to life. The range and scope of this Encyclopedia is vivid

testimony to the intellectual vitality of the field and will make a useful contribution to the next generation of sociological research on the cultural sociology of mental illness.

Cases on Multimorbidity and Its Impact on Elderly Patients

IGI Global
An account of the author's experiences in the Indian sub-continent, living through a period of partition and independence, with an introduction to political developments and a socio-economic scenario.

Nephrology Worldwide AuthorHouse
As old age is increasing globally, some challenges arise such as multimorbidity, a unique medical condition that has multiple potential complications and thus needs high-quality care directed by qualified healthcare providers. Multimorbidity is an important daily challenge to internists worldwide due to its many difficulties. Junior physicians dealing with multimorbidity must have the knowledge to practice high-quality care for their elderly patients. **Cases on Multimorbidity and Its Impact on Elderly Patients** considers approaches to manage multimorbidity and its unique complications and challenges to aid in

appropriate daily decision making. Covering key topics such as weight loss, aging, and frailty, this reference work is ideal for medical professionals, nurses, policymakers, researchers, scholars, academicians, practitioners, instructors, and students.

From their vast knowledge and experience, authors bring the essence of the subject "pediatrics" in the form of this text book, which will serve the purpose for students (both undergraduate and postgraduates), teachers and practicing pediatricians. Covers all common pediatric problems prevailing in the Indian sub-continent in lucid and easy-to-understand language. Concise, contains the recent updates, more community oriented, edited more frequently, less voluminous. Written by well-experienced eminent authors, who are serving as Professors and Consultants, facing day-to-day challenges of the subject. Designed as a textbook for both undergraduate and postgraduate students and as a guide to the teachers of pediatrics and practicing pediatricians. Chapters like Neonatology, Infant Feeding,

Growth and Development, Neurology, Oncology, Connective Tissue Diseases, and Immunization have been revised completely; and topics like Nephrotic Syndrome, Diabetes Mellitus, Newer Vaccines, Infectious Diseases, Genetic Disorders, Neurometabolic and Seizure Disorders have been updated extensively. New chapter, 'Drug Therapy', has been added; all critical emergency information, including shock, resuscitation, and life-threatening conditions are discussed duly. Management of common pediatric problems has been written following most recent WHO guidelines.

This book presents the patient management challenges that rural health centers face, and establishes the criteria for the type of medical imaging services that should be available in such facilities. To make the work of the center's health practitioners more effective and efficient, the book assesses what health conditions may require medical attention in those centers. Information is provided on how to

use basic imaging modalities, such as radiography and ultrasound, emphasizing the need for thoughtful service planning, careful equipment and imaging protocol selection, continuous staff training, and the implementation of quality control programs. The book is also a valuable resource for those physicians, medical physicists and service engineers who provide virtual and physical consultations to meet these needs. Rural health centers are established to prevent patients from being forced to travel to distant urban medical facilities. To manage patients properly, rural health centers should be part of regional and more complete systems of medical health care installations in the country on the basis of a referral and counter-referral program. Thus, the centers should have the infrastructure needed to transport patients to urban hospitals when they need more complex health care. The coordination of all the activities is possible only if rural health centers are led by strong and dedicated managers.

This book provides empirically driven discussions and investigations in the relevance of Actor Network Theory (ANT) and its theoretical concepts. As our civilization evolves from a human to a technologically driven society, new socio-technical network of actors - in society,

industry and government are emerging by the day. These networks of actors collaborate to produce contemporary goods and services; handle production processes; manage risks; develop social and commercial networks; develop

policies; manage complexities; and create a new way of life. This book provides unique conceptual tools needed to analyze such processes, highlighting the effectiveness of ANT in fostering collaborations between governments, organizations and society.
