Qualitative Research in Information Systems IGI Global

The 11 Working Conference of IFIP WG 8.6, Open-IT Based Innovation: Moving Towards Cooperative IT Transfer and Knowledge Diffusion, organized in Madrid in October 22-24, 2008, follows the series started in Oslo in 1995 and continues in the footprints of the past year's conference in Manchester. This year, although the Madrid Conference addresses the usual topics covered in previous WG8.6 conferences, the emphasis is on the issue of open innovation and its relationships with technology transfer and diffusion in the field of information technology. This issue is deeply modifying the way that knowledge is generated, shared, transferred, diffused, and used across the world as a side effect of globalization. It affects the organizational structure, partnerships, roles assumed by stakeholders, and technology transfer and diffusion models and instruments. Industry, academia, and governments are simultaneously concerned. Although the concept applies to all industrial sectors, IT companies were early innovators. The analysis of the contents of this

book allows the identification of some trends in technology transfer and diffusion issues as a part of the innovation process. The same problem is addressed in very different ways and extrapolation is not straightforward. Even innovation terminology is not clearly shared by different subcultures in the field.

Understanding Case Study Research Informing Science

Written in an accessible and jargon-free style, this book provides a comprehensive, student-friendly guide to the nature and use of case study research. Whether as part of a more substantial study or as the foundation for a self-contained smaller project, case studies provide viable and valuable alternatives to conducting large-scale research. Grounded in both theory and practice, this book sets out not only the key debates and ethical issues surrounding case study research, but also focuses specifically on the work of others and how you can understand, use, and write about secondary data as the basis for your own research project. With tips, examples, and extensive discussion of real-world case studies from a variety of social science and other disciplines, Tight illustrates the kinds of research to which case studies can be applied. Topics include: Types of case studies Advantages and disadvantages to using case studies The meaning and value of case study research The use of case studies in different disciplines and research designs Whether you want to know how to access and use the case studies of others or understand the methods behind conducting your own case study research, this book will take you through every step of the process!

"Human-Computer Interaction and Management Information Systems: Foundations" offers state-of-the-art research by a distinguished set of authors who span the MIS and HCI fields. The original chapters provide authoritative commentaries and in-depth descriptions of research programs that will guide 21st century scholars, graduate students, and industry professionals. Human-Computer Interaction (or Human Factors) in MIS is concerned with the ways humans interact with information, technologies, and tasks, especially in business, managerial, organizational, and cultural contexts. It is distinctive in many ways when compared with HCI studies in other disciplines. The MIS perspective affords special importance to managerial and organizational contexts by focusing on analysis of tasks and outcomes at a level that considers organizational effectiveness. With the recent advancement of technologies and development of many sophisticated applications, human-centeredness in MIS has become more critical than ever before. This book focuses on the basics of HCI, with emphasis on concepts, issues, theories, and models that are related to understanding human tasks, and the interactions among humans, tasks, information, and technologies in organizational contexts in general.

Globalization of business, internationalization of trade, and increasing prevalence of multi-cultural interdisciplinary teams are beginning to redefine the nature of office work. Different-time/different-place/different-culture teams will become the norm. Same-time/same-place/same-culture teams will become the exception. The International Office of the Future (IOF) will be a dramatically different environment than that which exists in the majority of today's organizations. Prospects for the IOF give rise to numerous questions, which are addressed in this book. What are the salient issues? What design options or solution strategies exist to address these issues? How might these design options be best implemented? What are their implications? In addition, a number of specific topics will be discussed including: multi-cultural team productivity, IT platform requirements, and global telecommunications.

The practices of participation and engagement are characterised by complexities and contradictions. All celebratory examples of uses of social media, e.g. in the Arab spring, the Occupy movement or in recent LGBTQ protests, are deeply rooted in human practices. Because of this connection, every case of mediated participation should be perceived as highly contextual and cannot be attributed to one (social) specific media logic, necessitating detailed empirical studies to investigate the different

contexts of political and civic engagement. In this volume, the theoretical chapters discuss analytical frameworks that can enrich our understanding of current contexts and practices of mediated participation. The empirical studies explore the implications of the new digital conditions for the ways in which digitally mediated social interactions, practices and environments shape everyday participation, engagement or protest and their subjective as well societal meaning.
