Macmillan +
ORM

This series is devoted to significant topics or themes that have wide application in mathematics or mathematical science and for which a detailed development of the abstract theory is less important than a thorough and concrete exploration of the implications and applications. Books in the Encyclopedia of Mathematics

and its Applications cover their subjects comprehensively. Less important results may be summarised as exercises at the ends of chapters. For technicalities, readers can be referred to the bibliography, which is expected to be comprehensive. As a result, volumes are encyclopedic references or manageable guides to major subjects. *Motor Vehicle Accident Reconstruction*

n and Cause Analysis John Wiley & Sons
Fifteen-year-old Lynda Mann's savagely raped and strangled body is found along a shady footpath near the English village of Narborough. Though a massive 150-man dragnet is launched, the case remains unsolved. Three years later the killer strikes again, raping and strangling teenager Dawn Ashforth only a stone's throw from where Lynda

was so brutally murdered. But it will take four years, a scientific breakthrough, the largest manhunt in British crime annals, and the blooding of more than four thousand men before the real killer is found.

"Constitution of the Republic of Kosovo" by Constitutional Commission of the Republic of Kosovo.
Published by Good Press.

Good Press publishes a wide range of titles that encompasses every genre. From well-known classics & literary fiction and non-fiction to forgotten—or yet undiscovered gems—of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously edited and formatted to boost readability for all e-readers and devices. Our goal is to

produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.

Live Right for Your Type MICHIE
In February 2003, Patrick Cockburn secretly crossed the Tigris river from Syria into Iraq just before the US/British invasion, and has covered the war ever since. In *The Occupation*, he provides a vivid and disturbing picture of a country in turmoil, and

the dangers and privations endured by its people. The Occupation explores the mosaic of communities in Iraq, the US and Britain's failure to understand the country they were invading and how this led to fatal mistakes. Cockburn, who has been visiting Iraq since 1978, describes the disintegration of the country under the occupation. Travelling throughout Iraq, from the Kurdish north, to Baghdad, Falluja and

Basra, he records the response of the country's population - Shia and Sunni, Arab and Kurd - to the invasion, the growth of the resistance and its transformation into a full-scale uprising. He explains why deepening religious and ethnic divisions drove the country towards civil war. Above all, Cockburn traces how the occupation's failure led to the collapse of the country, and the high

price paid by Iraqis. He charts the impact of savage sectarian killings, rampant corruption and economic chaos on everyday life: from the near destruction of Baghdad's al-Mutanabi book market to the failure to supply electricity, water and, ironically, fuel to Iraq's population. The Occupation is a compelling portrait of a ravaged country, and the appalling consequences

of imperial
arrogance.

alchemists and secret societies and the hermetic aspirations revealed in their works • Explains how surrealist paintings and poems employed mythology, gnostic principles, tarot, voodoo, alchemy, and other hermetic sciences to seek out unexplored regions of the mind and recover lost “psychic” and magical powers • Provides many examples of esoteric influence in

surrealism, such as how Picasso’s *Demoiselles d’Avignon* was originally titled *The Bath of the Philosophers* Not merely an artistic or literary movement as many believe, the surrealists rejected the labels of artist and author bestowed upon them by outsiders, accepting instead the titles of magician, alchemist, or-- in the case of Leonora Carrington and Remedios Varo--witch. Their

paintings, poems, and other works were created to seek out unexplored regions of the mind and recover lost “psychic” and magical powers. They used creative expression as the vehicle to attain what André Breton called the “supreme point,” the point at which all opposites cease to be perceived as contradictions. This supreme point is found at the heart of all esoteric doctrines, including the Great Work of

<p>alchemy, and enables communication with higher states of being. Drawing on an extensive range of writings by the surrealists and those in their circle of influence, Patrick Lepetit shows how the surrealists employed mythology, gnostic principles, tarot, voodoo, and alchemy not simply as reference points but as significant elements of their ongoing investigations into the fundamental</p>	<p>nature of consciousness . He provides many specific examples of esoteric influence among the surrealists, such as how Picasso's famous Demoiselles d'Avignon was originally titled The Bath of the Philosophers, how painter Victor Brauner drew from his father's spiritualist vocation as well as the Kabbalah and tarot, and how doctor and surrealist author Pierre Mabilie was a Freemason</p>	<p>focused on finding initiatory paths where "it is possible to feel a new system connecting man with the universe." Lepetit casts new light on the connection between key figures of the movement and the circle of adepts gathered around Fulcanelli. He also explores the relationship between surrealists and Freemasonry, Martinists, and the Elect Cohen as well as the Grail</p>

mythos and the Arthurian brotherhood. *Nietzsche i Yeats* Springer Nature Explains and illustrates how teachers can use corpora to create classroom materials and activities to address specific class needs. Using *Corpora in the Language Classroom* shows teachers how to use corpora and corpus tools to expand student learning. Together with its companion website, this teacher-

friendly book demystifies corpus linguistics with clear explanations, instructions and examples. It provides the essential knowledge, tools, and skills teachers need to enable students to discover how language is really used. Clear and concise, this volume provides: -An overview of corpus linguistics - Clear explanations of terminology -Tasks and activities that invite readers

to interact with the material - Principled instructions for creating classroom materials and activities, including how to create corpora to address specific class needs.

Academic Press
Achieve total physical and emotional well-being in 2020 by living right for your blood type.

Your blood type is the key to living a healthy and vibrant life. It

can affect your mental health, the way you digest your food and the efficiency of your metabolic and immune systems. New research has indicated that there's a blood-type profile for almost every aspect of our lives, not just our diet, and thanks to that new research, your blood type reveals how you can live a better life. This ground-breaking book will give you individualized prescriptions

according to blood type. Each blood-type prescription is divided into five life areas. In this book you'll find recommendations, guidelines, and informational charts for: · Lifestyle · Stress and Emotional Balance · Maximizing Health · Overcoming Disease · Strategies for Aging Based on your blood type, you'll learn whether you should: - Eat three regular meals a day, or

small, frequent ones? - Have a regimented or flexible routine? - Go to sleep at the same time every night or have a flexible bedtime? - Do without rest periods or take them religiously? - Achieve emotional balance through exercise, meditation, or herbs? With Live Right for Your Type you'll get a individualized prescription for maximising health, metabolism and vitality in

every stage of your life. *Process Redesign* Praxis Research Institute In this book written for a dangerous age, the founder of The Investigative Project on Terrorism offers a thorough and factual overview of the Islamist terrorist threat to America. The Esoteric Secrets of Surrealism Little, Brown Medical Division The purpose of this volume is to review the results in spectral graph theory which have appeared since 1978. The problem of characterizing graphs with least eigenvalue -2 was one of the original problems of spectral graph theory. The techniques used in the investigation of this problem have continued to be useful in other contexts including forbidden subgraph techniques as well as geometric methods involving root systems. In the meantime, the particular problem giving rise to these methods has been solved almost completely. This is indicated in Chapter 1. The study of various combinatorial objects (including distance regular and distance transitive graphs, association schemes, and block designs) have made use of eigenvalue techniques, usually as a method to

show the nonexistence of objects with certain parameters. The basic method is to construct a graph which contains the structure of the combinatorial object and then to use the properties of the eigenvalues of the graph. Methods of this type are given in Chapter 2. Several topics have been included in Chapter 3, including the relationships between the spectrum and automorphism

group of a graph, the graph isomorphism and the graph reconstruction problem, spectra of random graphs, and the Shannon capacity problem. Some graph polynomials related to the characteristic polynomial are described in Chapter 4. These include the matching, distance, and permanent polynomials. Applications of the theory of graph spectra to Chemistry and other branches of science are

described from a mathematical viewpoint in Chapter 5. The last chapter is devoted to the extension of the theory of graph spectra to infinite graphs. Zbornik Pravnog fakulteta Univerziteta u Istočnom Sarajevu Penguin UK This strategic report is Europol's flagship product providing information to Europe's law enforcement community and decision-makers about the threat of

serious and organised crime to the EU. The SOCTA is the cornerstone of the multiannual policy cycle established by the EU in 2010. This cycle ensures effective cooperation between national law enforcement agencies, EU institutions, EU agencies and other relevant partners in the fight against serious and organised crime. Building on the work of successive EU organised

crime threat assessments (OCTA), produced between 2006 and 2011, and in line with a new methodology developed in 2011 and 2012, this is the inaugural edition of the SOCTA. Recent Results in the Theory of Graph Spectra Universitätsverlag der TU Berlin
An excellent introduction to the real world of environmental work, this book covers all phases of data collection,

(planning, field sampling, laboratory analysis, and data quality assessment), and is a single source comprehensive reference for the resolution of the most common problems that environmental professionals face daily in their work. (Midwest).

The Occupation

World Bank Publications
This book summarizes the research being pursued as part of the Erasmus+ CBHE KA2 project entitled

"Development of master curricula for natural disasters risk management in Western Balkan countries" (NatRisk), which aims to educate experts on the prevention and management of natural disasters in the Western Balkan region in line with national and EU policies. The project has successfully developed and implemented master curricula and educational training in the field of natural disasters risk management, and a methodology for the identification and prevention of natural disasters. Consisting of 11 chapters, the book analyzes and discusses topics such as risk assessment tools and quality methods, the different approaches for civil-military collaboration, natural disasters risk management in Bosnia and Herzegovina, leadership models for managing crises resulting from natural disasters, natural disasters in industrial areas, natural risk management in geotechnics, flood risk modeling, adaptive neuro-fuzzy inference models for flood prediction, collapse prediction of masonry arches, an algorithm for fire truck dispatch in emergency situations, and

processing drought data in a GIS environment. *Dobri Duh Zagreba* Random House Unlock the family secrets in your DNA! Discover the answers to your family history mysteries using the most cutting edge tool available. This plain-English guide (newly updated and expanded to include the latest DNA developments) will teach you what DNA tests are available; the pros and cons

of the major testing companies; and how to choose the right test to answer your specific genealogy questions. And once you've taken a DNA test, this guide will help you use your often-overwhelming results, with tips for understanding ethnicity estimates, navigating suggested cousin matches, and using third-party tools like GEDmatch to further analyze your data. The

book features:

- Colorful diagrams and expert definitions that explain key DNA terms and concepts such as haplogroups and DNA inheritance patterns
- Detailed guides to each of the major kinds of DNA tests and tips for selecting the DNA test that can best help you solve your family mysteries, with case studies showing how each can be useful
- Information about third-

party tools you can use to more thoroughly analyze your test results once you've received them

- Test comparison guides and research forms to help you select the most appropriate DNA test and organize your results
- Insights into how adoptees and others who know little about their ancestry can benefit from DNA testing
- Whether you've just heard of DNA testing or you've tested at all three major companies, this guide will give you the tools you need to unpuzzle your DNA and discover what it can tell you about your family tree.

Gregor Mendel
Elsevier

For twelve years Robert Blecker, a criminal law professor, wandered freely inside Lorton Central Prison, armed only with cigarettes and a tape recorder. The Death of Punishment tests legal philosophy against the reality and wisdom of street criminals and their guards. Some killers' poignant circumstances should lead us to mercy; others show clearly why they should die. After thousands of hours over twenty-five years inside maximum security prisons and on death rows in seven states, the history and philosophy professor exposes the perversity of justice: Inside prison,

<p>ironically, it's nobody's job to punish. Thus the worst criminals often live the best lives. The Death of Punishment challenges the reader to refine deeply held beliefs on</p>	<p>life and death as punishment that flare up with every news story of a heinous crime. It argues that society must redesign life and death in prison to make the punishment</p>	<p>more nearly fit the crime. It closes with the final irony: If we make prison the punishment it should be, we may well abolish the very death penalty justice now requires.</p>
