Fire Investigation is a practical guide on the basics of fire investigation, with emphasis on ascertaining the cause of fire. Three items that constitute an acceptable cause of fire are highlighted: the source of ignition; the material first ignited; and the defect, act or omission which led to the source of ignition and the material first ignited creating a fire. This book is comprised of 11 chapters and begins with a discussion on sources of ignition and materials first ignited, paying particular attention to three temperature thresholds of combustible substances: flash-point temperature, fire-point temperature, and self-ignition temperature. Examples of sources of ignition are given, including ashes, soot, gas, and naked or open flame. Subsequent chapters deal with the reasons, motives, and methods of arson, as well as timing devices that may be used by arsonists; fire and non-fire explosions; variables that must be taken into account when trying to determine the rate of growth of a fire; and fatality occurring in a fire. The use of photographs and drawings in fire investigation is also considered, along with collection of samples and physical evidence from a fire scene and gathering of information through interviews. The final chapter presents abridged case histories of the six categories of arson. This monograph is written for students, fire officers and investigators, police officers, insurance investigators, and loss adjusters.

A leading voice in public health policy and top environmental medicine scientist reveals the alarming truth about how hormone-disrupting chemicals are affecting our daily lives—and what we can do to protect ourselves and fight back. Lurking in our homes, hiding in our offices, and polluting the air we breathe is something sinister. Something we've turned a blind eye to for far too long. Dr. Leonardo Trasande, a pediatrician, professor, and world-renowned researcher, tells the story of how our everyday surroundings are making us sicker, fatter, and poorer. Dr. Trasande exposes the chemicals that disrupt our hormonal systems and damage our health in irreparable ways. He shows us where these chemicals hide—in our homes, our schools, at work, in our food, and countless other places we can't control—as well as the workings of policy that protects the continued use of these chemicals in our lives. Drawing on extensive research and expertise, he outlines dramatic studies and emerging evidence about the rapid increases in neurodevelopmental, metabolic, reproductive, and immunological diseases directly related to the hundreds of thousands of chemicals that we are exposed to every day. Unfortunately, nowhere is safe. But, thanks to Dr. Trasande's work on the topic, and his commitment to effecting change, this book can help. Through a blend of narrative, scientific detective work, and concrete information about the connections between chemicals and disease, he shows us what we can do to protect ourselves and our families in the short-term, and how we can help bring the change we deserve.

Jabbed demonstrates that the medical procedure hailed as the greatest medical advancement in history—vaccines—is a racket run by criminals and gullible believers who have replaced vaccine science with the religion of vaccinology. Vaccine marketers teach believers to fear, shame, and

scapegoat anyone foolish enough to question the sanctity of vaccines. Such an environment is not the domain of science; rather it's the breeding ground of tyranny. *Jabbed* exposes this tyranny. From polio and smallpox to medical journals, medical curricula, congressional hearings, regulatory policies, White House statements, and executive orders, *Jabbed* shines light on the dark underbelly of Big Pharma, Big Medicine, and Big Government. A vaccine-informed public is the only thing that will have the power to stop vaccine industry sociopaths and to hold them accountable for their crimes. *Jabbed* informs and immunizes against three of the most dangerous epidemics in history: tyranny, greed, and corruption. Once immunized, the growing vaccine-informed community will have the power to stand up and dismantle the vaccine paradigm and program and to punish the perpetrators of what may well be the greatest medical fraud ever perpetrated on the human race: vaccines.

In *How to End the Autism Epidemic*, Generation Rescue's co-founder J.B. Handley offers a compelling, science-based explanation of what's causing the autism epidemic, the lies that enable its perpetuation, and the steps we must take as parents and as a society in order to end it. While many parents have heard the rhetoric that vaccines are safe and effective and that the science is settled about the relationship between vaccines and autism, few realize that in the 1960s, American children received three vaccines compared to the thirty-eight they receive today. Or that when parents are told that the odds of an adverse reaction are "one in a million," the odds are actually one in fifty. Or that in the 1980s, the rate of autism was one in ten thousand children. Today it's one in thirty-six. Parents, educators, and social service professionals around the country are sounding an alarm that we are in the midst of a devastating public health crisis—one that corresponds in lockstep with an ever-growing vaccine schedule. Why do our public health officials refuse to investigate this properly—or even acknowledge it? In *How to End the Autism Epidemic*, Handley confronts and dismantles the most common lies about vaccines and autism. He then lays out, in detail, what the truth actually is: new published science links the aluminium adjuvant used in vaccines to immune activation events in the brains of infants, triggering autism; and there is a clear legal basis for the statement that vaccines cause autism, including previously undisclosed depositions of prominent autism scientists under oath. While Handley's argument is unsparing, his position is ultimately moderate and constructive: we must continue to investigate the safety of vaccines, we must adopt a position of informed consent, and every individual vaccine must be considered on its own merits. This issue is far from settled. By refusing to engage with parents and other stakeholders in a meaningful way, our public health officials destroy the public trust and enable the suffering of countless children and families.

Dissecting the biggest medical myths and pseudoscience, *Viral BS* explores how misinformation can spread faster than microbes. Can your zip code predict when you will die? Should you space out childhood vaccines? Does talcum powder cause cancer? Why do some doctors recommend e-cigarettes while other doctors recommend you stay away from them? Health information—and misinformation—is all around us, and it can be hard to separate the two. A long history of unethical medical experiments and medical mistakes, along with a host of celebrities spewing anti-science

beliefs, has left many wary of science and the scientists who say they should be trusted. How do we stay sane while unraveling the knots of fact and fiction to find out what we should really be concerned about, and what we can laugh off? In *Viral BS*, journalist, doctor, professor, and CDC-trained disease detective Seema Yasmin, driven by a need to set the record straight, dissects some of the most widely circulating medical myths and pseudoscience. Exploring how epidemics of misinformation can spread faster than microbes, Dr. Yasmin asks why bad science is sometimes more believable and contagious than the facts. Each easy-to-read chapter covers a specific myth, whether it has endured for many years or hit the headlines more recently. Dr. Yasmin explores such pressing questions as • Do cell phones, Nutella, or bacon cause cancer? • Are we running out of antibiotics? • Does playing football cause brain disease? • Is the CDC banned from studying guns? • Do patients cared for by female doctors live longer? • Is trauma inherited? • Is suicide contagious? and much more. Taking a deep dive into the health and science questions you have always wanted answered, this authoritative and entertaining book empowers readers to reach their own conclusions. *Viral BS* even comes with Dr. Yasmin's handy Bulls\*%t Detection Kit.

Over the past 50 years, rates of chronic illness, learning disabilities, and allergies in children have exploded--1 in 6 children has a diagnosed learning disorder, 1 in 50 has autism, and 1 in 13 has severe food allergies. Instead of blaming genetics or increased awareness and diagnosis, author Thomas Cowan, MD, attributes these rising numbers to our current vaccination policy. In *Vaccines*,

*Auto-Immunity, and the Assault on Childhood*, Cowan combines his years of experience as a medical practitioner with his research into the history and science of vaccines to show how childhood illnesses, which help children to develop a robust immune system, are now eschewed by conventional medicine in favor of an increasing array of vaccinations that do more harm than good. Invoking philosopher Rudolph Steiner's vision of vaccines as inspired by "spirits of darkness," Cowan brings to light the various ways in which scientists and government officials work to promote a vaccine program that only increases suffering. Along the way he questions commonly held views of cell biology, the role of water in the body, and the spatial and spiritual components of autism. Additionally, he provides hope of recovery in the form of a nontoxic course of treatment for those suffering chronic inflammation and other averse immune responses to vaccines. Cowan's thoughtfully bold writing takes us on a journey into the history of illness, questioning the true origins of diseases such as polio, and asking important questions, such as: why did paralytic polio make a sudden appearance in the US in the years between 1916-1918? The answers lie far beyond what conventional medicine would have us believe. *Vaccines, Auto-Immunity, and the Assault on Childhood* asks that we re-examine not only our modern health system but our relationship with the spiritual world. Only then will we find true health.
