The historiography of timekeeping is traditionally characterized by a dichotomy between research that investigates the evolution of technical devices on the one hand, and research that is concerned with the examination of the cultures and uses of time on the other hand. Material Histories of Time opens a dialogue between these two approaches by taking monumental clocks, table clocks, portable watches, carriage clocks, and other forms of timekeeping as the starting point of a joint reflection of specialists of the history of horology together with scholars studying the social and cultural history of time. The contributions range from the apparition of the first timekeeping mechanical systems in the Middle Ages to the first evidence of industrialization in the 18th and 19th centuries.

The Last Boat is the second novel by author John Hanley, and the follow up to Against the Tide The book opens in the middle of the greatest naval disaster in British history when the Luftwaffe bombs and sinks the hastily converted Cunard liner, HMT Lancastria. In the ten minutes of bombing and strafing, over 5,000 troops and civilians are blown apart by the high explosive bombs. These losses represent more than one third of all members of the British Expeditionary Force killed in the nine months of war so far. The news is so shocking that Churchill suppresses it and the report into the loss will remain sealed until 2040. But this is only a beginning for Jack, Saul, Miko and Lt Commander Brewster who survive the attack and must fight their way back to Jersey through the German advance. During this journey they encounter a cargo so important that only Miko, the refugee physicist, really understands what could happen should the Germans intercept it. The Last Boat will appeal to readers of historical fiction who appreciate the complexities and uncertainties facing young adults as their world is forever shattered by war.

**The Coming Authoritarian Ecology** Oiseau Distract

During the 1970s, hundreds of thousands of people across Western Europe protested against civil nuclear energy. Nowhere were they more visible than in France and Germany-two countries where environmentalism seems to have diverged greatly since. This volume recovers the shared, transnational history of the early anti-nuclear movement, showing how low-level interactions among diverse activists led to far-reaching changes in both countries. Because nuclear energy was such a multivalent symbol, protest against it was simultaneously broad-based and highly fragmented. 'Concerned citizens' in communities near planned facilities felt that nuclear technology represented an outside intervention that potentially threatened their health, material existence, and way of life. In the decade after 1968, their concerns coalesced with more overtly 'political' criticisms of consumer society, the state, and militarism. Farmers, housewives, hippies, anarchists, and many more who defied categorization joined forces to oppose nuclear power, but the movement remained internally contradictory and outwardly unpredictable-not least with regard to violence at demonstrations. By analyzing the transnational dimensions, diverse outcomes, and internal divisions

of anti-nuclear protest, Better Active than Radioactive! provides an encompassing and nuanced understanding of one of the largest 'New Social Movements' in post-war Western Europe and situates it within a decade of upheaval and protest. Drawing extensively on oral history interviews as well as police, media, and activist sources, this volume tells the story of the people behind the protests, showing how individuals at the grassroots built up a movement that transcended national borders as well as political and social differences.

*Memoires D'outré-tombe* Dorling Kindersley Ltd

A partir de cette image, énigmatique et silencieuse, se développe une suite de récits, éclats de trajectoires individuelles ou collectives, dont l'auteur semble n'avoir conservé que le noyau, la force d'attraction magnétique. Les territoires autour desquels s'ordonne In situ - camps de réfugiés, périphéries des villes, déserts criblés d'obus, frontières, zones de transit et aires de surveillance - constituent un arrière-plan sur le fond duquel se détachent les traces, les rêves, la mémoire d'une humanité en proie à la dispersion, à la fuite ou à l'isolement. Dans une langue hantée par les milliers d'échos qui nous parviennent de la planète, Patrick Bouvet transcrit la douleur de notre époque, et son envers : un monde segmenté, contrôlé, devenu étranger aux hommes qui l'habitent, où la parole, la nôtre, celle de " l'individu isolé ", semble sans pouvoir.

*French Philosophy of Technology* Springer Science & Business Media

'Transgovernance: Advancing Sustainability Governance' analyses the question what recent and ongoing changes in the relations between politics, science and media - together characterized as the emergence of a knowledge democracy - may imply for governance for sustainable development, on global and other levels of societal decision making, and the other way around: How can the discussion on sustainable development contribute to a knowledge democracy? How can concepts such as second modernity, reflexivity, configuration theory, (meta)governance theory and cultural theory contribute to a 'transgovernance' approach which goes beyond mainstream sustainability governance? This volume presents contributions from various angles: international relations, governance and metagovernance theory, (environmental) economics and innovation science. It offers challenging insights regarding institutions and transformation processes, and on the paradigms behind contemporary sustainability governance. This book gives the sustainability governance debate a new context. It transforms classical questions into new options for societal decision making and identifies starting points and strategies towards effective governance of transitions to sustainability.

Long considered the epitome of all that is chic, glamorous, and desirable, Paris is every shopper's dream. But even the most indefatigable shopper is sure to be overwhelmed by the embarras de richesses. In The Riches of Paris, Maribeth Clemente shares her insider's knowledge of the choicest

boutiques, restaurants, wine cellars, and auctions to help you find endless treasures. Whether you're looking for designer fashions, Limoges china, the finest perfumes, the best Bordeaux, or just browsing, *The Riches of Paris* is an indispensable guide for making your visit to Paris enjoyable and unforgettable.

**Better Active than Radioactive!** Troubadour Publishing Ltd

*The Green Light* ('Le Feu Vert') offers an original and profound exploration of the roots of environmental philosophy and the Anthropocene. Bernard Charbonneau situates the wellspring of the ecological movement in the dialectics of Nature and Freedom, and their needful but uneasy joining against the totalizing system of technological society that threatens them both. Using this paradoxical tension as a yardstick, he probes the ways in which concepts of Nature have developed as industrialization became second nature and jeopardized the original, taken for granted until its advent. This allows Charbonneau to explain how movements and policies claiming to deal with this issue have gone wrong. A spirited critique of how the environmental movement has taken shape in relation to philosophy, politics, theology and contemporary culture, this book written in 1980 is representative of an oft-overlooked strand of French environmentalist thought, as a look back on its first decade in the public eye by a man who had originated political ecology half a century earlier. Charbonneau can be said to have prepared the way for many current concerns within environmental thought: the tension between liberalism and ecologism in green political theory; the wider question of the compatibility of ecological imperatives with supposedly foundational freedoms under capitalism; the discussions over how to balance existing democratic structures with environmental goals; the tensions between radical and reformist strategies within green movements; the controversy over the core values of ecological politics in a world transformed by climate change and peak everything; and the proper attitude of environmental movements to institutional science. This ground-breaking work should be front and centre of the debates that he anticipated, while giving a timely perspective on the interconnected questions of nature and human freedom. This first English translation of a work by Bernard Charbonneau provides not only a vivid account of environmental philosophy, but an introduction to this important author's thought.

*Material Histories of Time* PARIS By The Numbers

Some 20 years after writing *The Technological Society*, Jacques Ellul realized how the totalistic dimensions of our modern technological milieu required an additional treatment of the topic. Writing amidst the rise of books in the 1970s on pollution, over-population, and environmental degradation, Ellul found it necessary, once again, to write about the global presence of technology and its far-reaching effects. The Technological System represents a new stage in Ellul's research. Previously he studied technological society as such; in this book he approaches the topic from a systems perspective wherein he identifies the characteristics of technological phenomena and technological progress in light of system theory. This leads to an entirely new approach to what constitutes the most important event of our society which has decisive bearing on the future of our world. Ellul's analysis touches on all aspects of modern life, not just those of a scientific or technological order. In the end, readers are compelled to formulate their own opinions and make their own decisions regarding the way a technique-based value system affects every level of human life.

*Between Earth and Empire* FeniXX

Offering an overall insight into the French tradition of philosophy of technology, this volume is meant to make French-speaking contributions more accessible to the international philosophical community. The first section, "Negotiating a Cultural Heritage," presents a number of leading 20th century philosophical figures (from Bergson and Canguilhem to Simondon, Dagognet or Ellul) and intellectual movements (from Personalism to French Cybernetics and political ecology) that help shape philosophy of technology in the Francophone area, and feed into contemporary debates (ecology of technology, politics of technology, game studies). The second section, "Coining and Reconfiguring Technoscience," traces the genealogy of this controversial concept and discusses its meanings and relevance. A third section, "Revisiting Anthropological Categories," focuses on the relationships of technology with the natural and the human worlds from various perspectives that include anthropotechnology, Anthropocene, technological and vital norms and temporalities. The final section, "Innovating in Ethics, Design and Aesthetics," brings together contributions that draw on various French traditions to afford fresh insights on ethics of technology, philosophy of design, techno-aesthetics and digital studies. The contributions in this volume are vivid and rich in original approaches that can spur exchanges and debates with other philosophical traditions.

*The Complete Plays of Oscar Wilde* Editions Quae

This volume rethinks the work of Jacques Ellul (1912-1994) on the centenary of his birth, by presenting an overview of the current debates based on Ellul's insights. As one of the most significant twentieth-century thinkers about technology, Ellul was among the first thinkers to realize the importance of topics such as globalization, terrorism, communication technologies and ecology, and study them from a technological perspective. The book is divided into three sections. The first discusses Ellul's diagnosis of modern society, and addresses the reception of his work on the technological society, the notion of efficiency, the process of symbolization/de-symbolization, and ecology. The second analyzes communicational and cultural problems, as well as threats and trends in early twenty-first century societies. Many of the issues Ellul saw as crucial – such as energy, propaganda, applied life sciences and communication – continue to be so. In fact they have grown exponentially, on a global scale, producing new forms of risk. Essays in the final section examine the duality of reason and revelation. They pursue an understanding of Ellul in terms of the depth of experience and the traditions of human knowledge, which is to say, on the one hand, the experience of the human being as contained in the rationalist, sociological and philosophical traditions. On the other hand there are the transcendent roots of human existence, as well as "revealed knowledge," in the mystical and religious traditions. The meeting of these two traditions enables us to look at Ellul's work as a whole, but above all it opens up a space for examining religious life in the technological society.

*Histoire des jardins chez tous les peuples depuis l'antiquité jusqu'à nos jours* Indiana University Press

*Between Earth and Empire* focuses on the crucial position of humanity at the present moment in Earth history. We are now in the midst of the Necroocene, an epoch of death and mass extinction. Nearing the end of the long history of Empire and domination, we are faced with the choice of either continuing the path of social and ecological disintegration or initiating a new era of social and ecological regeneration. The book shows that conventional approaches to global crisis on both the right and the left have succumbed to processes of denial and disavowal, either rejecting the reality of crisis entirely or substituting ineffectual but comforting gestures and images for deep, systemic social transformation. It is argued that a large-scale social and ecological regeneration must be rooted in communities of liberation and solidarity, fostering personal and group transformation so that a culture of awakening and care can emerge. *Between Earth and Empire* explores examples of significant progress in this direction, including the Zapatista movement in Chiapas, the Democratic Autonomy Movement in Rojava, indigenous movements in defense of the commons, the solidarity economy movement, and efforts to create liberated base communities and affinity groups within anarchism and other radical social movements. In the end, the book presents a vision of hope for social and ecological regeneration through the rebirth of a libertarian and communitarian social imaginary, and the flourishing of a free cooperative community globally.

*Au Revoir* PM Press

Making the political aspect of Lefebvre's work available in English for the first time, this book contains essays on philosophy, political theory, state formation, spatial planning, and globalization, as well as provocative reflections on the possibilities and limits of grassroots democracy under advanced capitalism.

*The Green Light* Dorling Kindersley Ltd

"Beauty, Blissfulness & Tragedy: The Life of Oscar Wilde" is a biography of the famous Irish writer, poet and dramatist, written by his friend Frank Harris. After writing in different forms throughout the 1880s, Wilde became one of London's most popular playwrights in the early 1890s. Today he is remembered for his epigrams, his novel *The Picture of Dorian Gray*, his plays and poetry, and the circumstances of his imprisonment and early death. Wilde is a central figure in aesthetic writing. His controversial, open lifestyle was the reason he was charged and eventually convicted for the crime of sodomy.

*Jacques Ellul and the Technological Society in the 21st Century* Walter de Gruyter GmbH & Co KG Destinée aux enfants (à partir de huit ans), "Les petits chefs" est une série d'ouvrages, qui met le sens pratique et le plaisir de créer à l'honneur. Grâce à une présentation claire, une progression pas à pas dans la réalisation, les enfants parviendront - facilement - à un résultat dont ils seront fiers. "Les petits chefs" répondra aussi à leur appétit de découverte, en leur offrant des pages d'informations générales (anecdotes historiques ou culturelles) sur les matériaux ou les techniques employés dans chaque livre. Les petits chefs descendent au jardin, pour offrir à leurs lecteurs un plein panier d'idées faciles et décoratives. Bulbes et tubercules, plantation sur gravier ou sur billes, fleurs et fruits à déguster ou collections de cactées, cet ouvrage propose tous les trucs d'un vrai jardinier, pour savoir quand, où, comment planter et soigner tous ces végétaux. Il n'est pourtant pas réservé à ceux qui ont un jardin, puisque la plupart des plantes peuvent être cultivées sur un balcon, et même dans une chambre. Dans les pages culturelles, le lecteur découvrira des arbres exceptionnels, les jardins zen japonais ou les jardins du Taj Mahal, ainsi que des explications sur l'histoire de ces jardins, l'art topiaire ou la grande tradition du potager.

*Tous au jardin* Cambridge University Press

This book combines the field of economics —especially monetary theory— with other disciplines like ecology, physics, humanities, social sciences and development theory. This transdisciplinary approach makes the book a unique contribution for researchers, students, policy makers and professionals working in governmental or nongovernmental institutions, as well as anyone interested in society's well-being and achieving a true social-ecological transformation. It is written in an accessible language in order to reach a broad audience. In 2015, more than 190 world leaders recognized that the world is on a "collision course" (Max-Neef) and committed to 17 Sustainable Development Goals (SDGs). Many conferences and high-level meetings have been held since then, and one of the most frequently discussed topics is how to finance these goals. There is a widespread belief that coming up with more money for sustainable development will "do the trick". Usually, the discussions focus on finding additional financial resources in order to achieve the goals faster. In this book it is argued that not only is more money needed, but it needs to be a different kind of money. The book demonstrates that ALL but one of the SDGs are directly linked to our monetary system, which —being completely unnatural— can be seen as the most important, but at the same time least recognized, reason for market failure. Many people think we just need to do more, faster, better. Very few say that we have done things fundamentally wrong and that the institutions and values which motivated us to do those things need to be changed. It will be concluded that only if we change our unnatural design of money to a more natural one, will we be able to reach these goals

**The Riches of Paris** Good Press

Comprendre les jardins, c'est d'abord définir leurs caractéristiques communes : un lieu clos où, pour cultiver des plantes choisies, le jardinier exerce son observation. Cet apprentissage va de pair avec l'organisation des végétaux : espaces d'initiation, les jardins sont aussi un espace mental de rangement puisqu'ils peuvent avoir différents objectifs - jardins de production, d'apparat, de conservation, de collection, etc. Comprendre les jardins, c'est donc aussi repérer ce qui fait leur diversité : à travers les époques et les civilisations, comment les jardins ont-ils été conçus, perpétués, entretenus ? Dans la première partie du livre, quelques jardins exemplaires vous donneront envie de découvrir ce patrimoine vert des châteaux et des villes en vous initiant aux styles « à la française », « paysager », Renaissance italienne ou orientale, jusqu'au « jardin en mouvement » et à la « gestion différenciée » apparus dans les années 1980. Retracer l'histoire des plantes, de leurs origines et de leur domestication permet, dans la deuxième partie, de clarifier le vocabulaire parfois obscur qui désigne les végétaux. Et, parce que connaître les besoins biologiques des plantes constitue la clé du jardinage, l'auteur s'attache à expliquer certains phénomènes de la vie du jardin, tout en portant un regard critique sur les soins adaptés aux cultures recherchées. Dans le jardin, est-ce la nature ou l'homme qui dirige ? Cette question, qui guide la trame du livre, trouve

son point d'orgue dans la dernière partie, où l'histoire des découvertes scientifiques (sélections, génétique) met en perspective les enjeux de préservation de la biodiversité. Petite encyclopédie

portative, ce recueil de 90 questions-réponses propose une initiation à l'art des jardins. Il s'adresse ainsi à tout public intéressé par ce tourisme à la fois vert et urbain, et à tous les lecteurs curieux des savoirs et savoir-faire du jardinage.
