Betty and Nancy Debenham were a pair of young adventurous lady motorcyclists who entered trials competitions on equal terms with men in the 1920's. Although they were serious motorcyclists they never let this get in the way of their tremendous sense of fun. Their spirit shines through in 'Motor Cycling for Women'. A practical and yet at times eccentric and quirky book from a by-gone era that will make you smile.

"Among the crucial problems that confront mankind today are those associated with a degraded environment. This book examines the extent to which warfare and other military activities contribute to such degradation. The military capability to damage the environment and to cause ecological disruption has escalated, and there is no sign that the level of conflict in the world is

decreasing. The military use and abuse of each of the several major global habitats -- temperate, tropical, desert, arctic, insular, and oceanic -- are evaluated separately in the light of the civil use and abuse of that habitat"--Dust jacket.

Over the concluding decades of the twentieth century, the historic preservation community increasingly turned its attention to modern buildings, including bungalows from the 1930s, gas stations and diners from the 1940s, and office buildings and architectural homes from the 1950s. Conservation efforts, however, were often hampered by a lack of technical information about the products used in these structures, and to fill this gap Twentieth-Century Building Materials was developed by the U.S. Department of the Interior's National Park Service and first published in 1995. Now, this invaluable guide is being reissued—with a new preface by the book's original editor. With more than 250 illustrations, including a full-color photographic essay, the volume remains an indispensable reference on the history and conservation of modern building materials. Thirty-seven essays written by leading experts offer insights into the history, manufacturing processes, and uses of a wide range of materials, including glass block, aluminum, plywood, linoleum, and gypsum board. Readers will also learn about how these materials perform over time and discover valuable conservation and repair techniques. Bibliographies and sources for further research complete the volume. The book is intended for a wide range of conservation professionals including architects, engineers, conservators, and material scientists engaged in the conservation of modern buildings, as well as scholars in related disciplines.

In this first of a two-volume study, Dr. Futrell presents a chronological survey of the development of Air Force doctrine and thinking from the beginnings of powered flight to the onset of the space age. He outlines the struggle of early aviation enthusiasts to gain acceptance of the airplane as a weapon and win combat-arm status for the Army Air Service (later the Army Air Corps and Army Air Force). He surveys the development of airpower doctrine during the 1930s and World War II and outlines the emergence of the autonomous US Air Force in the postwar period. Futrell brings this first volume to a close with discussions of the changes in Air Force thinking and doctrine necessitated by the emergence of the intercontinental missile, the beginnings of space exploration and weapon systems, and the growing threat of limited conflicts

resulting from the Communist challenge of wars of liberation. In volume two, the author traces the new directions that Air Force strategy, policies, and thinking took during the Kennedy administration, the Vietnam War, and the post-Vietnam period. Futrell outlines how the Air Force struggled with President Kennedy's redefinition of national security policy and Robert S. McNamara's managerial style as secretary of defense. He describes how the Air Force argued that airpower should be used during the war in Southeast Asia. He chronicles the evolution of doctrine and organization regarding strategic, tactical, and airlift capabilities and the impact that the aerospace environment and technology had on Air Force thinking and doctrine.

The Triumph 750 is probably the classic British motorcycle that most people will recognize, whether they are enthusiasts or not. The bike's desirability continues to grow, aided by its easy availability and excellent parts back up. Triumph Bonneville T140 is aimed at the DIY enthusiast interested in renovation and restoration, and is fully illustrated with high-quality color images, coupled with clear and concise text. Following the real life resurrection of a T140E, with all the work being carried out by the author, the book shows how to assess wear in all mechanical components, then assists in deciding the most cost effective method of dealing with it. The process is dealt with in detail giving the owner the confidence to carry out repairs to a high standard, which will be both cost effective and satisfying. Brakes, suspension, brightwork and trim are all also addressed, making this an essential purchase for all Triumph 750 owners.

164 pages, 92 black & white illustrations, size 5.5 x 8.5 inches. Originally published under the title *The Book of the Royal Enfield* by W.C. Haycraft, this book is one of The Motorcyclist's Library series published in the USA by Floyd Clymer by arrangement with the original publishers Pitman Ltd. of London, England. It includes complete technical data, service and maintenance information and detailed instructions for the repair and overhaul of the major mechanical and electrical components for all Royal Enfield 250cc, 350cc and 500cc single cylinder G, J, J2, Bullet and Clipper models manufactured from 1946 through 1962. There is adequate detailed text and diagrams to assist in major refurbishing such as an engine rebuild or even a complete renovation. Please note that the 1957-1962 unit-construction "Crusader" type models are not covered in this publication. Information for that series of motorcycles is included in the "Second Book of the Royal Enfield" also available from www.VelocePress.com. This publication has been Out-of-print and unavailable for many years and is becoming increasingly more difficult to find on the secondary market and we are pleased to be able to offer this reproduction as a service to all Royal Enfield motorcycle enthusiasts worldwide.

Triumph Twin Restoration Haynes Publications

Written by an enthusiast with many years' experience of working on classic British motorcycles, this book covers the complete dismantling, refurbishment, and rebuilding of two Tridents: a 1973 Triumph T150V and a 1975 Triumph T160. This immensely

helpful book covers all parts of the rebuild in great detail; parts that other manuals gloss over, leaving the restorer confused and frustrated. From the simplest of jobs, such as removing the fuel tank, through to detailed explanations of rebuilding the engine and carburetors, this manual is an absolute must for any enthusiast contemplating working on their Triumph or BSA triple. Over 650 colour photographs and detailed text descriptions clarify every stage ... engine, gearbox, clutch, electrics, frame, wheels, forks, swinging arm, brakes, instruments ... the whole bike! Highly readable and entertaining, the author readily admits to the various pitfalls and mistakes he makes in order for others to avoid them. Designed to sit alongside existing workshop manuals, this book is intended to help the owner complete a full restoration of their beloved triple. Essential garage literature!

Triumph's Bonneville and its sibling, the TR6, are two of the most revered models in all of motorcycling. Distinguished by their handsome lines and pace-setting performance, the Bonneville and Tiger ruled the streets and race tracks from their introduction in the late 1950s through Triumph's golden age in the 1960s.

Devotion to the marque remained strong even as the sun slowly set on the company's fortunes in the late 1970s and early 1980s. The original Triumph's demise in 1983 simply served to cement the legendary status of its long-lived top guns, the Bonneville and TR6. Today the Bonnie and Tiger are highly sought-after classics-machines whose pedigree demands correct mechanical restoration and accurate refinishing. *Triumph Bonneville and TR6 Motorcycle Restoration Guide: 1956-1983* contains all the information needed to guarantee the correct restoration of your classic. More than 250 photos and extensive technical appendices supplement Triumph expert David Gaylin's thoroughly researched text.

The Commando was the main bike in Norton's range from 1968, and was produced until the demise of Norton Villiers Triumph in 1977. The bike featured the unique 'Isolastic' system that rubber-

mounted the engine and protected the rider from the twin-cylinder's vibrations. The model range provided the rider with a choice of touring and sporting models, as well as offering special police machines and off-the-shelf production racers. Commandos feature strongly in today's classic scene, and offer excellent performance and spares availability, as well as a vast range of improvements and updated components. This book looks at the history and development of the Commando, gives the

specifications and outlines the model changes, and also offers the riding experiences of past and present owners. In addition there is a blow-by-blow account of the author's restoration of a 1971 750cc model that had been re-imported into the UK from America needing a complete rebuild.

The two-stroke engine is widely used in both motorcycle racing and kart racing, and in very large numbers in model car, boat and

aircraft competition. The mechanical simplicity of the two-stroke engine gives it tremendous appeal, and makes it a tempting target for tuning operations, but the key to successful design, development and modification is knowledge of the engine's operating principles. This in-depth technical study of two-stroke theory and practice is intended to help would-be engine tuners to better understand the engine and the processes taking place within it, and thereby to obtain improved performance.
