In this book, James M. Scott argues that there is an essential continuity between the letter to the Galatians and Paul's Jewish past, and that Paul uses the Epistle of Enoch (1 Enoch 92-105) as a literary model for his own letter.

Recognizing that alcohol and drug use in the workplace is a significant social and economic problem, various forms of drug testing have been branded as the solutions to a safer and more productive work environment. In this determined drive to find a userfriendly and accurate substance use detection strategy, a variety of drug testing procedures have been developed and used with varying consistency across industry groups. One such method, trace detection technology, however, has been employed in spite of the paucity of empirical evidence to validate its use as a stand-alone screening system for drug detection. Furthermore,

research on the impact of false positive results of trace detection technology is extremely limited amidst a climate in many locales in which it is regularly used. With trace detection technology being used extensively in both the private and public sectors for drug screening purposes, the objectives of this research were twofold: To examine the efficacy of trace detection technology as a stand alone method of drug testing by exploring the lived experiences of commercial truck drivers who have experienced false-positive drug test results firsthand; and to explore the emotional and physical impact of false-positive test results generated by this technology on the individual commercial truck driver. The results from this research have broad implications for general workforces subject to periodic or scheduled drug screening, for law enforcement professionals who rely on a detection strategy that can produce false positive outcomes, for the legal community seeking understanding of this technology application, and for social science professionals who seek to pursue a provocative

research topic.

A Marketing Approach to Physician Recruitment is a how-to manual designed to assist hospitals in the physician recruitment process, or to enhance already existing recruitment programs. Given the ever-changing status on health care reform, hospital administrators and physicians are faced with the challenge of meeting the growing needs of patients, as well as their own internal priorities. In order to survive, the medical profession as a whole must make the commitment to identify the needs of the community it serves, while integrating the activities and roles of departments, boards and staff. In the past, physician recruitment has tended to itself. As part of a competitive system, neither the individual provider nor the medical group can afford to ignore its physician profile. This book is aware of the needs of today's hospitals and presents a program to facilitate the process of recruiting physicians. The authors provide the reader with a step-by-step physician recruiting

process. They include additional materials to support the recruiting process. The book is comprised of four sections. The process section provides organization for the recruitment program by assisting readers with creating a written plan. The resources section facilitates that plan's effectiveness by providing information for developing pro forms, community support, letters, tracking forms, incentive packages, and legal documents. The reference section lists organizations, contact names, addresses, and phone numbers needed for recruiting. A Marketing Approach to Physician Recruitment is the only book of its kind. Hospitals can use it to develop a practical and proven process for recruiting physicians. It is an effective tool for meeting the needs of patients and physicians alike.

This collection brings together the authors' previous research with new work on the Register-Functional (RF) approach to grammatical complexity, offering a unified theoretical account for its further study. The book traces the development of the RF approach from its foundations in two major research strands of

linguistics: the study of sociolinguistic variation and the text-linguistic study of register variation. Building on this foundation, the authors demonstrate the RF framework at work across a series of corpus-based research studies focused specifically on grammatical complexity in English. The volume highlights early work exploring patterns of grammatical complexity in present-day spoken and written registers as well as subsequent studies which extend this research to historical patterns of register variation and the application of RF research to the study of writing development for L1 and L2 English university students. Taken together, along with the addition of introductory chapters connecting the different studies, the volume offers readers with a comprehensive resource to better understand the RF approach to grammatical complexity and its implications for future research. The volume will appeal to students and scholars with research interests in either descriptive linguistics or applied linguistics, especially those interested in

grammatical complexity and empirical, corpus-based approaches.

A Marketing Approach to Physician Recruitment Studies in Language and Linguistics General Editors- Geoffrey Leech, Department of Modern English Language, Lancaster University and Jenny Thomas, School of English and Linguistics, University of Wales, Bangor Broad-ranging and authoritative, Studies in Language and Linguistics is an occasional series incorporating major new work in all areas of linguistics. Variation in English- Multi-Dimensional Studies provides both a comprehensive view into a relatively new technique for studying language, and a diverse, exciting collection of studies of variation in English. The first part of the book provides an explanation of multi-dimensional (MD) analysis, a research technique for studying

language variation. MD is a corpus-based approach developed by Doug Biber that facilitates large-scale studies of language variation and the investigation of research questions that were previously intractable. The second part of the book contains studies that apply Biber's original MD analysis of English to new domains. These studies

cover the historical evolution of English; specialized domains such as medical writing and oral proficiency testing; and dialect variation, including gender and British/American. The third part of the book contains studies that conduct new MD analyses, covering adult/child language differences, 18th century speech and writing, and discourse

complexity. Readers of this book will become familiar with the analytical techniques of multi-dimensional analysis, with its applicability to a wide variety of language issues, and with the findings of important studies previously published in diverse journals as well as new studies appearing for the first time.
