Despite obstacles, Anna and Selim pursue a romantic relationship. Will they find true happiness?

*The Egoist* OXFORD

'Brilliant and hilarious' GRAYSON PERRY 'Absolutely brilliant'

JENNIFER SAUNDERS, THE TIMES 'A delightful read' SUNDAY

TIMES 'An entertaining, clever book' TELEGRAPH The

international bestseller and unofficial guidebook to the English national character by anthropologist Kate Fox. Have you ever been unable to explain the idiosyncrasies of English humour, bizarre mobile-phone etiquette, or the endless obsession with class? In this classic bestselling book, social anthropologist Kate Fox puts a nation under a microscope. The result is a biting, affectionate, insightful and often hilarious look at the English in all our glory. Based on extensive field-research, experiments and observations, Fox deciphers a strange and fascinating culture, governed by complex sets of unspoken rules and bizarre codes of behaviour. She uncovers the roots of English self-mockery and demystifies peculiar cultural features such as 'weather-speak', class anxiety tests, the paranoid pantomime rule and the apology reflex. If you're English, this book will help you understand

yourself and your fellow countrymen in a new way. And if you aren't English, you'll finally understand why we talk about the weather so much. A worldwide bestseller, translated into multiple languages, and a set text for university anthropology courses, *Watching the English* is a timeless classic on the quirks, habits and foibles of the English people.

*End of an Era* Cambridge University Press

Chris leaves his home in a small town in Australia to go and study at the University of Sydney. He needs to find somewhere to live.

But it's not easy to find a house to share in a big city. Every house has its problems, and not all of Chris's housemates are easy to live with. In fact, some of them are very difficult people! Can Chris find the house that he needs with housemates that he can live with?

Club Cultures Random House

This book provides a fresh approach to Singapore English, by focusing on its cultural connotations. The author, a native Singaporean, explores a range of aspects of this rich variety of English - including address forms, cultural categories, particles and interjections - and links particular words to particular cultural norms. By using the Natural Semantic Metalanguage (NSM) approach, which is free from technical terminology, he explains the relationship between meaning and culture with maximal clarity, and an added strength of this study lies in its use of authentic examples and pictures, which offer a fascinating glimpse of Singaporean life. Through comparisons with Anglo English, it also explores some difficulties associated with Standard English and cultural misunderstanding. Lending a unique local perspective and written with an incisiveness that

makes it ideal for both academic and non-academic readers, this book will appeal to all those interested in Singapore English and its cultural values.

The ultimate listing of superlatives in every field.

*How to be Idle* Oxford University Press, USA

China's reform era is ending. Core factors that characterized it-political stability, ideological openness, and rapid economic growth-are unraveling. Since the 1990s, Beijing's leaders have firmly rejected any fundamental reform of their authoritarian one-party political system, and on the surface, their efforts have been a success. But as Carl Minzner shows, a closer look at China's reform era reveals a different truth. Over the past three decades, a frozen political system has fueled both the rise of entrenched interests within the Communist Party itself, and the systematic underdevelopment of institutions of governance among state and society at large. Economic cleavages have widened. Social unrest has worsened. Ideological polarization has deepened. Now, to address these looming problems, China's leaders are progressively cannibalizing institutional norms and practices that have formed the bedrock of the regime's stability in the reform era. *End of an Era* explains how China arrived at this dangerous turning point, and outlines the potential outcomes that could result.

*Oxford Discover: 4: Student's Book* Pan Macmillan

A retelling of five of Chaucer's classic tales in simplified language for new readers. Includes activities to enhance reading comprehension and improve vocabulary.

*The Foreign Policy of Counter Secession* Cambridge University Press

Contest theory is an important part of game theory used to analyse different types of contests and conflicts. Traditional microeconomic models focus on situations where property rights are well defined, and agents voluntarily trade rights over goods or produce rights for new goods. However, much less focus has been given to other situations where agents do not trade property rights, but rather fight over them. *Contests: Theory and Applications* presents a state-of-the art discussion of the economics of contests from the perspective of both core theory and applications. It provides a new approach to standard topics in labour, education, welfare and development and introduces areas like voting, industrial organisation, mechanism design, sport, and military conflict. Using elementary mathematics, this book provides a versatile framework for navigating this growing area of study and serves as an essential resource for its wide variety of applications in economics and political science.

*The Travels of Ibn Battuta* DIANE Publishing

The No.1 New York Times Bestseller In China, for the first time, the people who weigh too much now outnumber those who weigh too little. In Mexico, the obesity rate has tripled in the past three decades. In the UK over 60 per cent of adults and 30 per cent of children are overweight, while the United States remains the most obese country in the world. We are hooked on salt, sugar and fat. These three simple ingredients are used by the major food companies to achieve the greatest allure for the lowest possible cost. Here, Pulitzer Prize-winning investigative reporter

Michael Moss exposes the practices of some of the most recognisable (and profitable) companies and brands of the last half century. He takes us inside the labs where food scientists use cutting-edge technology to calculate the 'bliss point' of sugary drinks. He unearths marketing campaigns designed – in a technique adapted from the tobacco industry – to redirect concerns about the health risks of their products, and reveals how the makers of processed foods have chosen, time and again, to increase consumption and profits, while gambling with our health. Are you ready for the truth about what's in your shopping basket?

*Outing* OUP Oxford

The book provides a grounded, narrative exploration of contemporary qualitative PhD research in the fields of language education and applied linguistics. The chapters are authored by current and former PhD candidates studying in New Zealand, with commentaries from international experts in the field. The book contains ten chapters in addition to the foreword, introduction and afterword. Each chapter addresses a different stage of PhD candidature: pre-enrolment; the first six months, research design, literature review, data collection, data analysis, drafting chapters, supervision and feedback, publishing and the examination process. Each chapter includes a set of questions for the readers to reflect on issues raised by the authors, and a comprehensive list of references. The book is intended for an audience of prospective and current PhD candidates, PhD supervisors, academic language and learning advisors who work with PhD candidates, researchers working in the field of doctoral education, and university administrators in pertinent leadership

roles.

*Salt, Sugar, Fat* OXFORD

"If you liked *Chaos*, you'll love *Complexity*. Waldrop creates the most exciting intellectual adventure story of the year" (The Washington Post). In a rarified world of scientific research, a revolution has been brewing. Its activists are not anarchists, but rather Nobel Laureates in physics and economics and pony-tailed graduates, mathematicians, and computer scientists from all over the world. They have formed an iconoclastic think-tank and their radical idea is to create a new science: complexity. They want to know how a primordial soup of simple molecules managed to turn itself into the first living cell—and what the origin of life some four billion years ago can tell us about the process of technological innovation today. This book is their story—the story of how they have tried to forge what they like to call the science of the twenty-first century. "Lucidly shows physicists, biologists, computer scientists and economists swapping metaphors and reveling in the sense that epochal discoveries are just around the corner . . . [Waldrop] has a special talent for relaying the exhilaration of moments of intellectual insight." —The New York Times Book Review "Where I enjoyed the book was when it dove into the actual question of complexity, talking about complex systems in economics, biology, genetics, computer modeling, and so on. Snippets of rare beauty here and there almost took your breath away." —Medium "[Waldrop] provides a good grounding of what may indeed be the first flowering of a new science."

—Publishers Weekly

Pollyanna always tries to find the good in everything. She soon makes many different people in her new home feel happier. But is Miss Polly's life going to change for better or worse after her niece arrives? And what happens to Pollyanna when she has a very bad accident?

**Narratives of Qualitative PhD Research** Cambridge University Press

A retelling of the travels of Moroccan scholar Ibn Battuta in North Africa, the Middle East, and Asia during the fourteenth century, told in simplified language for new readers. Includes activities to enhance reading comprehension skills and improve vocabulary.

From the Heart Penguin UK

Donald Davidson has prepared a new edition of his classic 1980 collection of *Essays on Actions and Events*, including two additional essays. This seminal work on the nature of human

action features influential discussions of such topics as freedom to act; weakness of the will; the logical form of talk about actions, intentions, and causality; the logic of practical reasoning; Hume's theory of the indirect passions; and the nature and limits of decision theory. 'a classic in its field.' P. F. Strawson -; Donald Davidson has prepared a new edition of his classic 1980 collection of *Essays on Actions and Events*, including two additional essays. In this seminal investigation of the nature of human action, Davidson argues for an ontology which includes events along with persons and other objects. Certain events are identified and explained as actions when they are viewed as caused and rationalized by reasons; these same events, when described in physical, biological, or physiological terms, may be explained by appeal to natural laws. The mental and the physical thus constitute irreducibly discrete ways of explaining and understanding events and their causal relations. Among the topics discussed are: freedom to act; weakness of the will; the logical form of talk about actions, intentions, and causality; the logic of practical reasoning; Hume's theory of the indirect passions; and the nature and limits of decision theory. The introduction, cross-references, and appendices emphasize the relations between the essays and explain how Davidson's views have developed.
