There is an ongoing debate as to whether African American Studies is a discipline, or multidisciplinary or interdisciplinary field. Some scholars assert that African American Studies use a well-defined common approach in examining history, politics, and the family in the same way as scholars in the

disciplines of economics, sociology, and political science. Other scholars consider African American Studies multidisciplinary, a field somewhat comparable to the field of education in which scholars employ a variety of disciplinary lenses--be they anthropological, psychological, historical, etc., --to study the African world experience. In this model the boundaries between traditional disciplines are accepted, and researches in African American Studies simply conduct discipline based an analysis of particular topics. Finally, another group of scholars insists that African American Studies is interdisciplinary, an enterprise that generates distinctive analyses by combining perspectives from d

Theatre and film frequently require replicas of three-dimensional objects built for actors to use. This book lays the groundwork for an artisan to determine what materials and techniques to use to build these props. Walking the reader through the various tools and techniques used in historical and contemporary prop-making, the author present a process for deciding the materials and methods to build any prop. With an explanation of how the craft and its products have developed over time, the budding artisan will understand not just

how and when to use certain techniques or materials, but also why to use them and what advantages they give. It arms the prop maker with a structured procedure for approaching the construction of any prop. Illustrated with step-by-step examples of how to use each construction method, and explanations of different types of materials, this book gives the beginner prop artisan a strong foundation to approach the construction of props and answers the question, "How should I begin?" The author is hosting an online component to the book along with his successful blog. It will feature additional resources for the prop maker, including books, shops, contact information, and how-to videos.

Media Research Methods: Understanding Metric and Interpretive Approaches brings the insights of a senior theorist, methodologist, and critic to the classroom. Departing from the methods recipe approach, the text explains the reasons behind the methods and makes the connections to theory and knowledge production. Written in a conversational style, the book engages students and appeals to them as media consumers and users of research. The

book takes the reader through each step of the research process, outlining the procedures, differences, strengths and limitations of metric, interpretive and the newer hybrid approaches. The text lays down a strong foundation in empirical research and problem solving, addressing metric topics of hypotheses, sampling, statistics, survey and experimental protocols and interpretive topics of textual analysis, coding, critical engagement and ethnography. A special chapter at the end of the book is a helpful guide for those readers who aspire to a research and analysis career.

Every material has an active presence and every material is susceptible to change. The task of the sculptor is to understand the natural properties of a chosen material, to know in the process of creation how best to work with, or against, its characteristics. In this generously illustrated studio manual, sculptor Oliver Andrews takes a new approach to sculpture, focusing on how the innate assertiveness of materials affects the complex act of making a sculpture.
