Under the Act gives an insight into the removal of our people from their homeland and placed somewhere totally foreign and expected to live in harmony; not only with other Aboriginal and Torres Strait Islander people from many different communities but also the Qld Government. This book shows the heroic men who had had enough of the treatment and stood up as a united group to the government and their journey off Palm Island because of this. It makes the reader understand what they were going through and is evidence of how our people were treated many years ago.

How do people come to think of themselves as part of a nation? Dramas of Nationhood identifies a fantastic cultural form that binds together the Egyptian nation—television serials. These melodramatic programs—like soap operas but more closely tied to political and social issues than their Western counterparts—have been shown on television in Egypt for more than thirty years. In this book, Lila Abu-Lughod examines the shifting politics of these serials and the way their contents both reflect and seek to direct the changing course of Islam, gender relations, and everyday life in this Middle Eastern nation. Representing a decade's worth of research, Dramas of Nationhood makes a case for the importance of studying television to answer larger questions about culture, power, and modern self-fashionings. Abu-Lughod explores the elements of developmentalist ideology and the visions of national progress that once dominated Egyptian television—now experiencing a crisis. She discusses the broadcasts in rich detail, from the generic emotional qualities of TV serials and the depictions of authentic national culture, to the debates inflamed by their deliberate strategies for combating religious extremism.

Tinnitus and oversensitivity to sound are common and hitherto incurable, distressing conditions that affect a substantial number of the population. Pawel Jastreboff's discovery of the mechanisms by which tinnitus and decreased sound tolerance occur has led to a new and effective treatment called Tinnitus Retraining Therapy (TRT). Audiologists, ENT specialists, psychologists and counsellors around the world currently practise this technique, with very high success rates. TRT, the treatment developed by the authors from the model, has already proved to be the most effective and most widely practised worldwide. This book presents a definitive description and justification for the Jastreboff neurophysiological model of tinnitus, outlining the essentials of TRT, reviewing the research literature justifying their claims, and providing an expert critique of other therapeutic practices.

Healthcare providers, consumers, researchers and policy makers are inundated with unmanageable amounts of information, including evidence from healthcare research. It has become impossible for all to have the time and resources to find, appraise and interpret this evidence and incorporate it into healthcare decisions. Cochrane Reviews respond to this challenge by identifying, appraising and synthesizing research-based evidence and presenting it in a standardized format, published in The Cochrane Library ([www.thecochranelibrary.com](http://www.thecochranelibrary.com)). The Cochrane Handbook for Systematic Reviews of Interventions contains methodological guidance for the preparation and maintenance of Cochrane intervention reviews. Written in a clear and accessible format, it is the essential manual for all those preparing, maintaining and reading Cochrane reviews. Many of the principles and methods described here are appropriate for systematic reviews applied to other types of research and to systematic reviews of interventions undertaken by others. It is hoped therefore that this book will be invaluable to all those who want to understand the role of systematic reviews, critically appraise published reviews or perform reviews themselves.

'Some people improve mentally with age - here's how you can be one of them.' Mail on Sunday With a new chapter on Covid and the Brain, this is the definitive guide to keeping your brain healthy for a long and lucid life, by one of the world's leading scientists in the field of brain health and ageing. The brain is our most vital and complex organ. It controls and coordinates our actions, thoughts and interactions with the world around us. It is the source of personality, of our sense of self, and it shapes every aspect of our human experience. Yet most of us know precious little about how our brains actually work, or what we can do to optimise their performance. Whilst cognitive decline is the biggest long-term health worry for many of us, practical knowledge of how to look after our brain is thin on the ground. In this ground-breaking new book, leading expert Professor James Goodwin explains how simple strategies concerning exercise, diet, social life and sleep can transform your brain health paradigm, and shows how you can keep your brain youthful and stay sharp across your life. Combining the latest scientific research with insightful storytelling and practical advice,

Supercharge Your Brain reveals everything you need to know about how your brain functions, and what you can do to keep it in peak condition.

Although decompressive craniectomy is a surgical procedure that has been with us for the past 100 years, its prognostic value in long-term outcomes remains doubtful and its use is at a crossroads. Three randomized trials and numerous cohorts, along with comparative studies over the past 15 years (as shown in the presented figure) have significantly improved our understanding of this simple surgical procedure. In writing this book, the authors not only tried to present state-of-the-art evidence describing the molecular and cellular cascades discovered during the past 40 years and current critical care management of traumatic brain injury, but also found it very appropriate to consider the views of scientists who have contributed immensely in understanding the pathobiology of severe head injury (Simard and Fiskum). The current values of multimodality monitoring of neurochemical processes (Badjatia, Bullock) and the contribution of maximal medical management through guidelines (Stein, Ullman) help to understand how far research concerning the management of head injury has come. The authors deem it important to present the personal views of leading scientists who have conducted two high impact randomized controlled trials (Cooper, Hutchinson, Servadei and Sahuquillo) and the experiential views of decompressive craniectomy during the Operation Iraqi Freedom and Operation Enduring Freedom campaigns (Rosenfeld, Neal). Joint discussions of ethical views between the next of kin and surgeons as well as the value of informed consent constitute the ultimate objective before proceeding with the surgical procedure (Honeybul). The promise of the future, which hangs on additional imaging biomarkers with higher predictive values is presented in a systematic review (Aarabi) that stresses a clear view of the extent of rostral-caudal injury severity to the functional connectivity network, and the connectome on magnetic resonance imaging before proceeding with decompressive craniectomy in patients with low motor subscores.

Handbook of Neurofeedback is a comprehensive introduction to this rapidly growing field, offering practical information on the history of neurofeedback, theoretical concerns, and applications for a variety of disorders encountered by clinicians. Disorders covered include ADHD, depression, autism, aging, and traumatic brain injury. Using case studies and a minimum of technical language, the field's pioneers and most experienced practitioners discuss emerging topics, general and specific

treatment procedures, training approaches, and theories on the efficacy of neurofeedback. The book includes comments on the future of the field from an inventor of neurofeedback equipment and a discussion on the theory of why neurofeedback training results in the alleviation of symptoms in a wide range of disorders. The contributors review of procedures and a look at emerging approaches, including coherence/phase training, inter-hemispheric training, and the combination of neurofeedback and computerized cognitive training. Topics discussed include: Implications of network models for neurofeedback The transition from structural to functional models Client and therapist variables Treatment-specific variables Tomographic neurofeedback Applying audio-visual entrainment to neurofeedback Common patterns of coherence deviation EEG patterns and the elderly Nutrition and cognitive health ADHD definitions and treatment Attention disorders Autism disorders The neurobiology of depression QEEG-guided neurofeedback This book is an essential professional resource for anyone practicing, or interested in practicing neurofeedback, including neurotherapists, neuropsychologists, professional counselors, neurologists, neuroscientists, clinical

For the wolveren creatures and the feral den mothers. For the heartbroken dreamers reclaiming their voices, their time, their wholeness. For everyone who refuses to be tamed. For you, my gently rebellious seekers, my fiercely sensitive kin, I offer you a piece of my heart: "Secrets & Stars" is the debut poetry collection of poet, photographer, and spiritual director, Alix Klingenberg. Playing with archetype and myth, this book explores a return to wholeness, a rejection of fractured existence, and a claiming of the entire self as beloved, sacred, and divine. With roots in earth-centered spirituality, the elements of nature, wilderness, and cycles permeate this volume that manages to illuminate, in a truly intimate way, the struggles of a poet coming into her own voice.

In 1978, the German government established an expert committee, the Commission E, to evaluate the safety and efficacy of over 300 herbs and herb combinations sold in Germany. The results were published as official monographs that gave the approved uses, contraindications, side effects, dosage, drug interactions and other therapeutic information essential for the responsible use of herbs and phyto-medicines. For the first time, the complete set of all Commission E monographs has been compiled, translated into English and edited for use by physicians, pharmacists, health professionals, researchers, regulatory agencies, consumers and the herb industry.
