Trieste Publishing has a massive catalogue of classic book titles. Our aim is to provide readers with the highest quality reproductions of fiction and non-fiction literature that has stood the test of time. The many thousands of books in our collection have been sourced from libraries and private collections around the world. The titles that Trieste Publishing has chosen to be part of the collection have been scanned to simulate the original. Our readers see the books the same way that their first readers did decades or a hundred or more years ago. Books from that period are often spoiled by imperfections that did not exist in the original. Imperfections could be in the form of blurred text, photographs, or missing pages. It is highly unlikely that this would occur with one of our books. Our extensive quality control ensures that the readers of Trieste Publishing's books will be delighted with their purchase. Our staff has thoroughly reviewed every page of all the books in the collection, repairing, or if necessary, rejecting titles that are not of the highest quality. This process ensures that the reader of one of Trieste Publishing's titles receives a volume that faithfully reproduces the original, and to the maximum degree possible, gives them the experience of owning the original work. We pride ourselves on not only creating a pathway to an extensive reservoir of books of the finest quality, but also providing value to every one of our readers. Generally, Trieste books are purchased singly - on demand, however they may also be purchased in bulk. Readers interested in bulk purchases are invited to contact us directly to enquire about our tailored bulk rates.

The Monthly observer, and New Church record BRILL

This volume is based on plenary presentations from *Challenges of a Changing Earth*, a Global Change Open Science Conference held in Amsterdam, The Netherlands, in July 2001. The meeting brought together about 1400 scientists from 105 countries around the world to describe, discuss and debate the latest scientific understanding of natural and human-driven changes to our planet. It examined the effects of these changes on our societies and our lives, and explored what the future might hold. The presentations drew upon global change science from an exceptionally wide range of disciplines and approaches. Issues of societal importance - the food system, air quality, the carbon cycle, and water resources - were highlighted from both policy and science perspectives. Many of the talks presented the exciting scientific advances of the past decade of international research on global change. Several challenged the scientific community in the future. What are the visionary and creative new approaches needed for studying a complex planetary system in which human activities are intimately interwoven with natural processes? This volume aims to capture the timeliness and excitement of the science presented in Amsterdam. The plenary speakers were given a daunting task: to reproduce their presentations in a way that delivers their scientific messages accurately and in sufficient detail but at the same time reaches a very broad audience well beyond their own disciplines. Furthermore, they were required to do this in just a few pages.

History: A Very Short Introduction Palala Press

Record-Making and Record-Keeping in Early Societies provides a concise and up-to-date survey of early record-making and record-keeping practices across the world. It investigates the ways in which human activities have been recorded in different settings using different methods and technologies. Based on an in-depth analysis of literature from a wide range of disciplines, including prehistory, archaeology, Assyriology, Egyptology, and Chinese and Mesoamerican studies, the book reflects the latest and most relevant historical scholarship. Drawing upon the author's experience as a

practitioner and scholar of records and archives and his extensive knowledge of archival theory and practice, the book embeds its account of the beginnings of recording practices in a conceptual framework largely derived from archival science. Unique both in its breadth of coverage and in its distinctive perspective on early record-making and record-keeping, the book provides the only updated and synoptic overview of early recording practices available worldwide. Record-Making and Record-Keeping in Early Societies will be of interest to academics, researchers, and students engaged in the study of archival science, archival history, and the early history of human culture. The book will also appeal to practitioners of archives and records management interested in learning more about the origins of their profession.

Lawyers in Scotland in the later sixteenth century took a disproportionate interest in the law governing maritime commerce. Some essays in this collection consider their handling of the subject in treatises they wrote. Other essays, however, show that disputes relating to maritime trade were handled in a different way in the courts of the towns at which ships arrived. Further essays examine the relationship between these contrasting perspectives. Although the essays focus on the law governing maritime commerce in Scotland, they also contribute to a wider debate about the nature of maritime law in early-modern Europe.

This book, the first of three volumes, provides a thorough background to the emerging field of neurobehavioral toxicology by looking at current clinical approaches and tests, as well as assessing current clinical research. The analysis of the impact of toxins on the human nervous system is particularly pertinent given the ongoing expansion of pharmaceuticals, industrial hazards, biological warfare and global pollution. A comprehensive introduction to neurobehavioral toxicology, this work will be of interest to practicing neurologists and neuropsychologists, as well as to occupational medicine physicians and medical toxicologists.

Foreword by Peter Machinist Hermann Gunkel's groundbreaking *Schöpfung und Chaos*, originally

published in German in 1895, is here translated in its entirety into English for the first time. Even though available only in German, this work by Gunkel has had a profound influence on modern biblical scholarship. Discovering a number of parallels between the biblical creation accounts and a Babylonian creation account, the *Enuma Elish*, Gunkel argues that ancient Babylonian traditions shaped the Hebrew people's perceptions both of God's creative activity at the beginning of time and of God's re-creative activity at the end of time. Including illuminating introductory pieces by eminent scholar Peter Machinist and by translator K. William Whitney, Gunkel's *Creation and Chaos* will appeal to serious students and scholars in the area of biblical studies.

Wallace's Monthly Palala Press

There are many stories we can tell about the past, and we are not, perhaps, as free as we might imagine in our choice of which stories to tell, or where those stories end. John Arnold's *Very Short Introduction* is a stimulating essay about how we study and understand history. The book begins by inviting us to think about various questions provoked by our investigation of history, and explores the ways these questions have been answered in the past. Concepts such as causation, interpretation, and periodization, are introduced by means of concrete examples of how historians work, giving the reader a sense of the excitement of discovering not only the past, but also ourselves. ABOUT THE SERIES: The *Very Short Introductions* series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.
