In the 16th Edition of *Advances in Econometrics* we present twelve papers discussing the current interface between Marketing and Econometrics. The authors are leading scholars in the fields and introduce the latest models for analysing marketing data. The papers are representative of the types of problems and methods that are used within the field of marketing. Marketing focuses on the interaction between the firm and the consumer. Economics encompasses this interaction as well as many others. Economics, along with psychology and sociology, provides a theoretical foundation for marketing.

A revised edition of the well-received thermodynamics text, this work retains the thorough coverage and excellent organization that made the first edition so popular. Now incorporates industrially relevant microcomputer programs, with which readers can perform sophisticated thermodynamic calculations,

including calculations of the type they will encounter in the lab and in industry. Also provides a unified treatment of phase equilibria. Emphasis is on analysis and prediction of liquid-liquid and vapor-liquid equilibria, solubility of gases and solids in liquids, solubility of liquids and solids in gases and supercritical fluids, freezing point depressions and osmotic equilibria, as well as traditional vapor-liquid and chemical reaction equilibria. Contains many new illustrations and exercises.

After an overview of the fundamentals, limitations, and scope of reactive distillation, this book uses rigorous models for steady-state design and dynamic analysis of different types of reactive distillation columns and quantitatively compares the economics of reactive distillation columns with conventional multi-unit processes. It goes beyond traditional steady-state design that primarily considers the capital investment and energy costs when analyzing the control structure and the dynamic robustness of disturbances, and discusses how to maximize the economic and environmental benefits of reactive distillation technology.

What Really Sank the Titanic: Springer Nature

The "\$70k CEO" shares why he decided to pay a living wage at his company and urges entrepreneurs and other leaders to use their values to make better business decisions.

Was the ship doomed by a faulty design? Was the hull's steel too brittle? Was the captain negligent in the face of repeated warnings? On the night of April 14, 1912, the "unsinkable" RMS Titanic, with over 2,200 passengers onboard, struck an iceberg in the North Atlantic and plunged to a watery grave. For nearly a century, the shocking loss has haunted the world. Now the same CSI techniques that are used to solve modern murder cases have been applied to the sinking of history's most famous ship.

Researchers Jennifer Hooper McCarty and Tim Foecke draw on their participation in expeditions to the ship's wreckage and experiments on recovered Titanic materials to build a compelling new scenario. The answers will astound you. . . . Grippingly written, *What Really Sank the Titanic* is illustrated with fascinating period photographs and modern scientific evidence reflecting the authors' intensive study of Titanic artifacts for more than ten years. In an age when forensics can catch killers, this

book does what no other book has before: fingers the culprit in one of the greatest tragedies ever. "A fascinating trail of historical forensics." --James R. Written by one of the world's leading researchers and writers in the field, *Econometric Analysis of Panel Data* has become established as the leading textbook for postgraduate courses in panel data. This new edition reflects the rapid developments in the field covering the vast research that has been conducted on panel data since its initial publication. Featuring the most recent empirical examples from panel data literature, data sets are also provided as well as the programs to implement the estimation and testing procedures described in the book. These programs will be made available via an accompanying website which will also contain solutions to end of chapter exercises that will appear in the book. The text has been fully updated with new material on dynamic panel data models and recent results on non-linear panel models and in particular work on limited dependent variables panel data models.

"Early robot probes sent by Russian and American scientists had given us some tantalizing but fragmentary glimpses of the surface and atmosphere, hinting at some of the most exotic conditions seen in the solar system. Magellan showed a planet full of beautiful landscapes, some eerily familiar and some completely unexpected - a world of active volcanoes, shining

mountains, and even river valleys carved by torrents of flowing lava. Venus may once have had a wet, temperate, comfortable climate, much like Earth's. What happened to turn it into a hostile, burning, acid world? Our twin has important tales to tell us regarding several of Earth's most pressing environmental problems, including ozone destruction, global warming, and acid rain. In *Venus Revealed*, David Grinspoon makes a compelling case for comparative planetology as an important tool for gaining knowledge that is vital for our long-term survival on our own planet. He re-examines the uniqueness of our own Earth in light of the recent Magellan findings, while also raising the provocative questions: Did a runaway greenhouse effect transform Venus into the burning oven she is today? By treating Venus as a "controlled experiment," what can we learn from her that will help us survive on Earth? Grinspoon tackles these and other long-debated questions while explaining the incredible scientific advances made possible by the Magellan space probe."--BOOK JACKET. Surviving Incarceration Yale University Press

Shrouded by the thick clouds of hot, dense atmosphere, the planet Venus - Earth's closest neighbour in space - remained mysterious until recent decades. Today, with data from contemporary observations and from Russian and American spacecraft, Venus has moved into sharper focus. This comprehensive book provides an up-to-date and detailed analysis of the nature of Venus. The authors, experts in planetary science from Russia and the United States, examine all the principal aspects of Venus, with particular attention paid to the planet's formation, the development of a runaway greenhouse effect, and

Venus' evolution into a planet completely different from others in our solar system. Integrating data from Galileo, Magellan, Pioneer-Venus, Venera and other space missions, this book summarizes the history of Venus, covers the atmosphere, geomorphology and tectonic history of the planet, and considers its geology.

 Is prison a humane form of punishment and an effective means of rehabilitation? Are current prison policies, such as shifting resources away from rehabilitation toward housing more offenders, improving the safety and lives of incarcerated populations? Considering that many Canadians have served time, are currently incarcerated, or may one day be incarcerated—and will be released back into society—it is essential for the functioning and betterment of communities that we understand the realities that shape the prison experience for adult male offenders. *Surviving Incarceration* reveals the unnecessary and omnipresent violence in prisons, the heterogeneity of the prisoner population, and the realities that different prisoners navigate in order to survive. Ricciardelli draws on interviews with almost sixty former federal prisoners to show how their criminal convictions, masculinity, and sexuality determined their social status in prison and, in consequence, their potential for victimization. The book outlines the modern "inmate code" that governs prisoner behaviours, the formal controls put forth by the administration, the dynamics that shape sex-offender experiences of incarceration, and the personal growth experiences of many prisoners as they cope with incarceration.

"Performa 15 is the sixth volume in an acclaimed series on the Performa biennials that adds to the rich history of artists' performance, presenting the most exciting innovations in live art across disciplines, including dance, film, sound, architecture, and poetry. Celebrating ten years since the founding of the Performa biennial in 2005, Performa 15 also reached back across centuries as part of its research: this edition took the Renaissance as its underlying "anchor," showing the importance of performance by visual artists in the aristocratic courts as well as in the public pageantry of those earlier times. This beautiful book features documentation of commissions by the 65 artists from 12 countries who took part, such as Robin Rhode (South Africa), Pauline Curnier Jardin (France), Edgar Arceneaux (United States),

Erika Vogt (United States), Jérôme Bel (France), and Francesco Vezzoli (Italy) in collaboration with principal classical ballet dancer David Hallberg (United States), among many others. Performa 15's Pavilion Without Walls program presented a unique series of workshops, conversations, and performances with artists, curators, and writers from Australia. With a foreword by renowned curator and art historian Germano Celant, Performa 15 features in-depth interviews with artists and texts by art historians, curators, and critics, including Claire Bishop, Mark Beasley, Adrienne Edwards, and Jason Farago. Fully illustrated with performance photographs by Paula Court and other contributors, Performa 15 captures a critical juncture in the evolution of performance within the visual arts and the world's leading performance biennial."--
