This book provides an international legal analysis of the most important questions regarding Iran's nuclear program since 2002. Setting these legal questions in their historical and diplomatic context, this book aims to clarify how the relevant sources of international law - including primarily the 1968 Nuclear Non-proliferation Treaty and IAEA treaty law - should be properly applied in the context of the Iran case. It provides an instructional case study of the application of these sources of international law, the lessons which can be applied to inform both the on-going legal and diplomatic dynamics surrounding the Iran nuclear dispute itself, as well as similar future cases. Some questions raised regard the watershed diplomatic accord reached between Iran and Western states in July, 2015, known as the Joint Comprehensive Program of Action. The answers will be of interests to diplomats and academics, as well as to anyone who is interested in understanding international law's application to this sensitive dispute in international relations.

Educating the Top 100 Percent assesses the decline of higher education funding and offers ambitious policy recommendations to restore the

possibility of accessible, affordable education for all. Stephen G. Katsinas, Nathaniel J. Bray, and Martha J. Kanter probe the complex interplay of federal, state, and local policies and illustrate how government actions have, over time, contributed to the long-term slide of US educational attainment. Declining federal and state funding of public higher education has forced institutions to revise their financial models, passing costs directly through to students, to the detriment of prospective students—and the nation. Experts in education policy, the authors point out how the unintended consequences of today's funding model deny an ever-increasing portion of the population important educational and professional opportunities. By providing context for how we arrived at this financial conundrum and analyzing robust quantitative data from national sources, Katsinas and his colleagues offer pragmatic, sustainable, and stable policy options for educating all Americans. The authors provide innovative ideas, key lessons learned, and actionable proposals to fund public higher education. Their top-down federal and bottom-up local and state policy solutions aim to rectify plummeting high school-to-college continuation and college graduation rates. As a result, they present a vision of a brighter economic, cultural, and civic future for educating all Americans. Educating the Top 100 Percent demonstrates how stable, sustainable funding policies can scaffold a better public higher education system for all.

When it comes to the hotly disputed topic of college admissions, the one thing everyone agrees about is that it's unfair. But there is little agreement on what a fair process would be. Rebecca Zwick takes a hard look at the high-stakes competition of U.S. college admissions today. Illustrating her points using analyses of survey data from applicants to the nation's top colleges and universities, she assesses the goals of different admissions systems and the fairness of criteria—from high school grades and standardized test scores to race, socioeconomic status, and students' academic aspirations. The demographic makeup of the class and the educational outcomes of its students can vary substantially, depending upon how an institution approaches its task. Who Gets In? considers the merits and flaws of competing approaches and demonstrates that admissions policies can sometimes fail to produce the desired results. For example, some nontraditional selection methods can hurt more than help the students they are intended to benefit. As Zwick shows, there is no objective way to evaluate admissions systems—no universal definition of student merit or blanket entitlement to attend college. Some schools may hope to attract well-rounded students, while others will focus on specific academic strengths. What matters most is that a school's admissions policy reflects its particular educational philosophy. Colleges should be free to include socioeconomic and racial preferences among their admissions criteria, Zwick contends, but they should strive for transparency about the factors they use to evaluate applicants.

The idea of 'pornography' is often employed to invoke titillation, anger, and disgust. Stigma and the Shaping of the Pornography Industry explores the effects that this stigmatized identity has on the pornography industry itself. From the video era to the emergence of the internet, to trade shows, white-collar workers, technological innovation, and industry-wide characteristics, this book looks beyond content production to explore how stigma has shaped the structures, practices, norms, and boundaries of the wider sector. By drawing on concepts such as dirty work, core-stigmatized industries, and outlaw innovation, this book offers rich insights into the ways in which stigma is socially constructed and managed, and the deep structural effects that it has on the industry.

This Handbook approaches sustainable development in higher education from an integrated perspective, addressing the dearth of publications on the subject. It offers a unique overview of what universities around the world are doing to implement sustainable development (i.e. via curriculum innovation, research, activities, or practical projects) and how their efforts relate to education for sustainable development at the university level. The Handbook gathers a wealth of information, ideas, best practices and lessons learned in the context of executing concrete projects, and assesses methodological approaches to integrating the topic of sustainable development in university curricula. Lastly, it documents and disseminates the veritable treasure trove of practical experience currently available on sustainability in higher education.

Bloodstained Sands tells the untold story of the men who stormed beaches around the globe during World War II, from the Sword and Juno Beaches on D-Day to the sands of Iwo Jima. For the men who served in America's Amphibious Forces during World War II, the conflict was an unceasing series of D-Days. They were responsible for putting men ashore in more than 200 landings throughout the conflict, most against well-entrenched enemy positions. Bloodstained Sands: US Amphibious Operations in World War II tells the story of these forgotten men for the first time, tracing their operational history from Guadalcanal to Casablanca, Sicily, Normandy, Iwo Jima and finally Okinawa. The men's stories are told in their own voices, with fascinating accounts from Underwater Demolition Teams, Attack Transport crews and many other unsung heroes of World War II. First-hand interviews, entries from personal diaries and Action Reports create a unique history, perfectly complemented by historic illustrations and detailed maps. These are timeless tales of determination, sacrifice, and triumph of the human spirit - tales of US Amphibious Forces that for too long have gone forgotten and untold.

In the past decade, states across the nation have cut higher education spending per student by more than 15 percent. Kentucky has experienced some of the largest cuts in the country, leading many to claim that higher education is in a state of crisis. In spite of this turmoil, however, Kentucky's remarkable institutions of higher education stand more capable than ever to prepare new generations for the challenges and opportunities of their time. College for the Commonwealth: A Case for Higher Education in American Democracy illustrates how colleges and universities are the sustaining lifeblood of civil society and that when these vital institutions are underfunded, both the community and economy suffer. Michael T. Benson and Hal R. Boyd examine the historical origins of higher education in America and analyze the benefits of postsecondary education through the lens of Kentucky. Presented as a practical yet persuasive look at why America needs thoughtful reinvestment in its colleges and universities, this study details how helping students can help sustain a healthy, democratic social fabric while bolstering the modern economy. Gathering examples and offering solutions for postsecondary institutions, this work serves as a call to action and a roadmap for educators, administrators, and government officials.

The hits keep coming for the American legal profession. Law schools are churning out too many graduates, depressing wages, and constricting the hiring market. Big Law firms are crumbling, as the relentless pursuit of profits corrodes their core business model. Modern technology can now handle routine legal tasks like drafting incorporation papers and wills, reducing the need to hire lawyers; tort reform and other regulations on litigation have had the same effect. As in all areas of today's economy, there are some big winners; the rest struggle to find work, or decide to leave the field

altogether, which leaves fewer options for consumers who cannot afford to pay for Big Law. It would be easy to look at these enormous challenges and see only a bleak future, but Ben Barton instead sees cause for optimism. Taking the long view, from the legal Wild West of the mid-nineteenth century to the post-lawyer bubble society of the future, he offers a close analysis of the legal market to predict how lawyerly creativity and entrepreneurialism can save the profession. In every seemingly negative development, there is an upside. The trend towards depressed wages and computerized legal work is good for middle class consumers who have not been able to afford a lawyer for years. The surfeit of law school students

will correct itself as the law becomes a less attractive and lucrative profession. As Big Law shrinks, so will the pernicious influence of billable hours, which incentivize lawyers to spend as long as possible on every task, rather than seeking efficiency and economy. Lawyers will devote their time to work that is much more challenging and meaningful. None of this will happen without serious upheaval, but all of it will ultimately restore the health of the faltering profession. A unique contribution to our understanding of the legal crisis, the unconventional wisdom of Glass Half Full gives cause for hope in what appears to be a hopeless situation.
