Final Standards, Classification, and Designation of Lines of Class I Railroads in the United States Routledge
 Given the recent advances in telecommunications and the fact that the French lead the field in many aspects of information technology, this will be a valuable tool for students, translators and interpreters. The author has himself worked for a number of years as a technical translator and the dictionary reflects his knowledge and practical experience. 30,000 entries in each language cover terminology used in telecommunications, electronics and computer science, and developments in

related disciplines such as the design and manufacture of printed circuits and components, installation, testing, maintenance and software programming. [Marketing Brill Archive](#)
 The law on administrative procedure regulates the processes through which administrative decisions and administrative projects are elaborated. It is more and more regarded as essential in administrative laws: it is really considered as the central part of it in some systems. In many jurisdictions, rules concerning administrative procedure are codified, gathered in a single piece of general legislation: in a few, it remains non codified. The book is made of the different contributions presented on the topic to the last congress of the International Academy of International Law (Taipei, 2012): national reports on twenty countries and a

general report. These contributions examine the way administrative procedure became codified, the obstacles which had to be overcome, the main orientations of the codes, their evolution in time; alternatively, they explain why administrative procedure is not codified. Providing extensive materials on an issue which is a concern in many administrative laws and many administrative systems, the book is intended for all searchers and experts in administrative law and public management, whether academics or practitioners.

 This edited volume presents ground-breaking empirical research on the media in political transition in Tunisia, Turkey and Morocco. Focusing on developments in the wake of the region's upheavals in 2011, it offers a new theoretical framework for

understanding mediascapes in the confessional and hybrid-authoritarian systems of the Middle East. In this book, media scholars focus on three themes: the media's structure as an expression of governance, the media's function as a reflection of the market, and the media's agency in communicating between power and the public. The result is a unique addition to the literature on two counts. Firstly, analysis of similar players, issues and processes in each country produces a thematically consistent comparative assessment of the media's role across the southern Mediterranean region. The first cross-country comparison of specific media practices in the Middle East, it covers issues such as women in talk shows, media's relationship with surveillance, and comparative practices of media regulation. Secondly, actualising the idea that media reflects the society that produces it, the studies here draw on field data to lay the foundations for a new theory of media, Values and Status Negotiation (VSN), which evolved from the region's unique characteristics and practices, and offers an alternative to prevailing Western-centric approaches to media analysis. Media and Politics in the Southern Mediterranean will appeal to students and scholars of politics, sociology, Media Studies, Cultural Studies and Middle Eastern Studies.

The Covid-19 pandemic has directly impacted the way teachers and learners worldwide teach and learn languages, forcing numerous educational activities in technologically-deprived contexts to stop altogether and those in technologically-rich environments to go online on an emergency basis. This volume provides a collection of theoretical and practical insights into the challenges and

affordances faced globally during the pandemic and lessons learnt about the application of digital technologies for language teaching and learning. The chapters explore the vital role of technology in its various forms, including the internet, social media, CALL (Computer-Assisted Language Learning), MALL (Mobile Assisted Language Learning), TALL (Technology Assisted Language Learning) and TELL (Technology Enhanced Language Learning). Topics explored include the new avenues digital technology has opened up for language teachers and learners, options and challenges in applying technology in various contexts, and how the second language education industry could have been adversely impacted at the time of the pandemic without technological affordances. The contributions showcase studies from various geographical contexts, revealing how the global crisis was received and tackled differently in Australia, Hong Kong, Iran, Italy, Japan, New Zealand, the UAE, the UK and the USA.

Features a useful collection of important and practical papers on applying software metrics and measurement. The book details the importance of planning a successful measurement program with a complete discussion of why, what, where, when, and how to measure and who should be involved. Each chapter addresses these significant questions and provides the essential answers in building an effective measurement program. The book differs from others on the market by focusing on the application of the metrics rather than the metrics themselves. The author's provide information based on actual experience with successful metrics programs. Each chapter includes a case study focusing on technology transfer and a set of recommended references. The book serves as a guide on the use and application of software metrics in industrial environments. It is specially designed for managers, product

supervisors, and quality assurance personnel who want to know how to implement a metrics program.

Minorities, Free Speech and the Internet explores the regulation of free speech online and offline. Views are divided as to how much regulation of the Internet is appropriate. Some argue that it should be an unregulated space for free content. On the other hand, in many democracies, online hate speech, harassment and xenophobia are prohibited and punished. This book provides a forum for leading international scholars to address domestic and comparative dimensions of this complex legal conundrum. First, the authors analyse the free speech and Internet regulations in different legal cultures, including the United States, Europe, China and Russia. Second, they study fake news, extreme right speech and the implications of hate speech on pluralistic society. Third, they examine different case law addressing minority sensibilities, historical discriminations, offensive propaganda and other issues particularly concerning minorities and free speech. This book will be of interest to students and scholars interested in the topics of hate speech and minorities, democracy, misinformation and debates about the Internet, as well as political science researchers.

Written for courses in Principles of Marketing at four-year and two-year colleges, this shorter overview aims to help students master the basic principles and practices of modern marketing in an enjoyable and practical way. Its coverage balances upon three essential pillars - (1) theory and concepts; (2) practices and applications; and (3) pedagogy - cultivating an efficient, effective teaching and learning environment. This sixth edition provides revised content throughout, and reflects the major trends and forces that are impacting marketing in this new, connected millennium. It includes new thinking and expanded coverage on a wide variety of topics, for example: relationship marketing; connecting technologies; the company value chain; value-delivery networks; and global marketing.

This volume provides an innovative and timely approach to a fast growing, yet still under-studied field in Latin American cultural production: digital online culture. It focuses on the transformations or continuations that cultural products and practices such as hypermedia fictions, net.art and online performance art, as well as blogs, films, databases and other genre-defying web-based projects, perform with respect to Latin American(ist) discourses, as well as their often contestatory positioning with respect to Western hegemonic discourses as they circulate online. The intellectual rationale for the volume is located at the crossroads of two, equally important, theoretical strands: theories of digital culture, in their majority the product of the anglophone academy; and contemporary debates on Latin American identity and culture.
