**Relationship Marketing in the Digital Age** CRC Press  
 Electrical Contracting, Second Edition is a nine-chapter text guide for the greater efficiency in planning and completing installations for the design, installation and control of electrical contracts. This book starts with a general overview of the efficient cabling and techniques that must be employed for safe wiring design, as well as the cost estimation of the complete electrical contract. The subsequent chapters are devoted to other electrical contracting requirements, including electronic motor control, lighting, and electricity tariffs. A chapter focuses on the IEE Wiring Regulations and Statutory Regulations to ensure compliance to the

fundamental requirements for safety. The discussion then shifts to visual inspection and testing in accordance with the IEE Wiring Regulations. The last chapter describes the special role of the Joint Industrial Council for Electrical Installation Contracting in introducing a rational and equitable incomes policy into the industry. This text includes many worked examples and illustrations to demonstrate how the technical and commercial aspects are put into practice.

For centuries autonomy has been a public policy tool used to provide stability and cohesion to multicultural societies. Examining case studies on non-territorial autonomy arrangements in comparison with territorial autonomy examples, this volume seeks to inform both design and decision making on managing diversity.

Covers the design, selection, installation and evaluation of mechanical systems on boats. This book is suitable for boat designers, builders, owners, buyers, mechanics, surveyors and insurers. Get the full story on your boat's mechanical system. The first book to cover the design, selection, installation and evaluation of mechanical systems on boats, "Boat Mechanical Systems Handbook" will be an invaluable guide for boat designers, builders, owners, buyers, mechanics, surveyors and insurers. Dave Gerr recommends design guidelines and components for drive trains, engine fuel and exhaust systems, bilge pumps, steering, ventilation, anchor handling systems and more.

**Essentials of Cardiovascular Physiology** Springer Science & Business Media

A tutorial that teaches the basic features and functions of the latest release of WordPerfect Presentations, in approximately 20 mini-tutorials, each of which can be completed in 10 minutes or less. Timesaving Tips, Plain English definitions and Panic Button advice help users throughout the book.

*Modern Diesel Technology: Diesel Engines* is an ideal primer for the aspiring diesel technician, using simple, straightforward language and a building block approach to build a working knowledge of the modern computer-controlled diesel engine and its subsystems. The book includes dedicated chapters for each major subsystem, along with coverage devoted to dealing with fuel subsystems, and the basics of vehicle computer control systems. Fuel and engine management systems are discussed in generic terms to establish an understanding of typical engine systems, and there is an emphasis on fuel systems used in post-2007 diesel engines. Concluding with a chapter on diesel emissions and the means used to control them, this is a valuable resource designed to serve as a foundation for more advanced studies in diesel engine technology

The concept of relationship marketing has been discussed among marketing academics and managers since the early 1980s. But instead of reaching its maturity stage, relationship marketing is nowadays encountering its next upsurge. Due to a confluence of trends driving the global business world—including the transition to service-based economies, faster product commoditization, intensified competition worldwide, growth among emerging markets, aging populations, advertising saturation, and (above all) the digital age—strong customer relationships are more than ever vital to company strategy and performance. *Relationship Marketing in the Digital Age* provides a comprehensive overview of the state-of-the-art of relationship marketing, offering fruitful insights to marketing scholars and practitioners. In seven chapters, divided into two main sections on understanding (Part I) and effectively applying (Part II) relationship marketing, an introductory and a concluding chapter, readers learn how to

successfully manage customer-seller relationships.

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

This book had its start when Douglas A. Sloan and the late Ralph Davies first decided to share our firm's experience in mine

management consulting assignments by using this experience as the basis for a mine management and productivity course. Over the years with more and more assignments, the course text notes were continuously updated and improved. However, the notes only reached the relatively few persons in the mining industry who attended each year's courses. The purpose of this book is to make this experience and knowledge available to everyone who has an interest in systematic mine management. The book is based on nearly 500 mine management consulting assignments which over the years were carried out by too many consultants to begin to mention names. However, some of the international experts whose work was used or who directly contributed must be mentioned. First would be Col. 1. F. Urwick whose books, articles and personal guidance of the author have had a general influence on the whole book and a specific influence on the Organization chapter. Others are John Humble whose work in developing Management by Objectives (MBO) is reflected in that chapter and Patrick H. Irwin for his work in Corporate Planning, which he has written of in that chapter.
