The Psychology of

Socialism SAGE

Since the 17th century,
autobiography has an
honorable place in the
study of history. In
1930, the preeminent

historian of psychology, Edwin Boring, writes that a science separated from its history lacks direction and promises a future of uncertain importance. To understand what psychology is and what it is becoming, the autobiographies of famous psychologists is history at it best. Here we find model inquirers of the science who offer a personalized account of themselves and their vocation in the context of the history of the science. What is characteristic of many of those who have contributed to an alternate vision of psychological science is that they never considered themselves, or were considered by others, as belonging to the

mainstream of the discipline. In considering an alternative history of psychology in autobiography, the editor invited contributors whose research and writings have pushed the discipline in other directions, pushed its limits, and whose scholarship finds its philosophical framework outside the discipline altogether. If these contributors may not be model inquirers, their scholarship is very much a matter of consequence for those who wish to understand psychology. Among the outliers included here are those who devoted themselves to the writing of psychology, examining its history, theories, research and professional practices,

and who enthusiastically embraced, over the course of their lives, the discipline as a human science. Their influence has been subtle as has been their appeal to many students who affection for the discipline finds its promise in a discerning self-awareness and a critical understanding of others and their worlds. This volume is not simply a collection of personal chronologies which might inspire or lend appreciation to a younger generation. Our contributors write from their personal and professional experience, of course, but they write of their thinking and understanding of the psyche as an aspect of human life, of

psychology as an academic form of human sciences' inquiry, and so bring to bear their scientific and philosophical imagination to their personal challenges in their chosen vocation as psychologists. Our contributors cover a broad swath of the second half of the 20th century, the century of psychology. Nurturing the discipline from within various philosophical, social-political, and cultural roots, their autobiographies exemplify marginality, if not alienation, from the mainstream, even as their professional and personal lives give expression to engaged scholarship, commitment to vocation and, straightforwardly and reflectively, a love of

the heart. From Germany, Carl Graumann, from France, Erika Apfelbaum, from Canada, David Bakan and Kurt Danziger, and from the United States, Amedeo Giorgi, Robert Rieber, and Joseph Rychlak, relate their lives to the larger contexts of our times. Their personal stories are an integral part of the historiography of our discipline. Indeed, a contribution to historiography of our discipline is constituted in their autobiographical self-presentations, for their writings attest as much to their lives as model inquirers as they do to the possibility of psychology as a human science.

explicitly embracing

spans scholarship across a variety of traditions that include theoretical psychology, critical psychology, feminist psychology and social constructionist approaches. Following a historical and conceptual introduction, the collection is divided into three sections: Scoping a New Psychology of Science and Technology, Applying Psychological Concepts to the Study of Science and Technology and Critical Perspectives on Psychology as a Science. The book will interest interdisciplinary scholars who work in the space of Science and Technology Studies and psychologists interested in the

diverse human aspects of science and technology. Origins of Professional Psychology in Canada (1925-1965)

Routledge

The new edition of Sport and Exercise Psychology asks four fundamental questions that get to the heart of this flourishing discipline: What inner states influence what

people think, feel, and behave? How can people manage or self-regulate their own inner states? How can sport and exercise psychology professionals help people manage their inner states? Is sport psychology just a placebo effect? Taking an applied perspective that bridges the gap between sport and exercise, the book answers these questions by covering the key topics in the field, including confidence, anxiety, self-regulation, stress and self-esteem. There are also chapters on the role of music in performance, imagery and exercise addiction. Each chapter is written by an expert in that field, and includes a range of features illustrating specific

issues, either within the research literature or their practical application. This is a comprehensive and engaging overview of an evolving discipline, and will be essential reading to any student of sport and exercise psychology. It will also be of huge interest to athletes and coaches seeking an accessible understanding of the role of psychology in sport.

Psychology & Apartheid Taylor & Francis

Edward C. Webster was one of the earliest vocational guidance and industrial psychologists in Canada. He opened his practice in 1936 and was also a long-time professor of psychology and university administrator. During the last decade of his life, he began to document his perspective on early professional psychologists—almost all of whom he had known personally—and the nature of the profession, its origins and evolution in Canada, and the interplay between the emergence of psychology as a profession and the

development of the Canadian Psychological Association. Sometime after Edward died in 1989, his son and the executor of his estate, William G. Webster, found his drafts, notes, and correspondence with others. As a retired academic psychologist himself, William felt that his father had a most interesting story to tell. Working with his son, David E. G. Webster, William compiled Edward's recollections of and reflections on the early years of the profession, those pre- and immediately post-World War II, and those through to the mid-1960s, when a pivotal conference set the trajectory for professional psychology and professional psychologists in

Canada. With new information not previously published by Edward Webster or others, *Origins of Professional Psychology in Canada (1925-1965)* brings forward the thought-provoking, authentic reflections of a man whose ground-breaking contributions to applied psychology forever changed the field.

New York Magazine

Routledge

Originally published in 1970 this title commemorates the men and ideas that started, inspired and established a pioneer

institution in British psychiatry. Based on the impetus of Freudian and related innovations after the First World War, the Tavistock Clinic offered treatment, training and research facilities in the field of neurosis, child guidance and later on group relations. Dr Dicks, who had been associated for nearly forty years with the work and personalities that helped to develop the Tavistock venture, describes the struggles and capacity for survival of the clinic. He shows how, belonging neither to the older classical psychiatry nor to orthodox psychoanalysis, and suspect to both, the Clinic nevertheless became increasingly used by the rest of the

profession as a psychotherapeutic resource. Dr Dicks describes the influence of the Tavistock on the medical, psychological and social work scene both before and after the Second World War, and assesses its achievements as a centre of psycho- and socio-dynamic thinking. The Tavistock is shown as a pioneer sui generis, launching psychosomatic research and initiating the exciting ventures in social psychiatry associated with the Army in the Second World War. As the Tavistock was the outcome of work with shell-shock victims in the first war, so its offspring, the Institute of Human Relations, was the natural continuation of the military effort in man-

agement, morale and group dynamic studies. The book includes an account of the inter-relationship between the Clinic, now part of the National Health Service, and the Institute, a private corporation. Still going strong as part of the Tavistock and Portman NHS Foundation Trust today this is an opportunity to revisit its early history.

 World events have raised pressing questions of psychology as it is practiced all over the globe. The Handbook

of International Psychology chronicles the discipline of psychology as it evolves in different regions, in the hope of reducing the isolated, parochial, and ethnocentric nature of the American profession. It surveys the history, methodology, education and training, and the future of psychology in nine distinct regions across six continents. They represent long histories in the field, such as the United States and the United Kingdom, emerging practices, such as Uganda, Korea and Spain, the lesser-known philosophies of China and histories marked by massive social change, as in Poland and Iran. The editors have carefully

selected contributors, as well as an editorial board created especially for this project. Each chapter follows a uniform outline, unifying the volume as a whole, but allowing for the cultural diversity and status of psychology in each country.

Would you like to be a Clinical Psychologist? If so, this is the ideal book for you as it is a jargon-free introduction for anyone wanting to work in this demanding but rewarding mental health profession. This clear guide invites you to think critically about whether becoming a Clinical Psychologist is right for you, questioning and

challenging your views and providing an honest perspective of life as a clinical psychologist. Written from personal experience of over 10 years working in applied psychology, with a unique knowledge of the practice, theory, and application of Clinical Psychology, Paul Jenkins provides a first-hand perspective, blending anecdotes with factual advice on the clinical academic culture. It is also packed with case studies which highlight a range of different career pathways (including in other mental health fields) and includes coverage of post-qualification life to gives the reader a sense of the career you can have after training. "This book offers a

broad and realistic perspective on what it's like to be a clinical psychologist, including an understanding of the diversity of the role beyond the therapy room, and in the current climate of the NHS. Much to our happiness, the book is not a 'how to' guide for clinical psychology training but an honest and open reflection on the profession itself. The reader is frequently encouraged to explore their motivations to train in clinical psychology. Reflections are prompted on both 'do I want to be a clinical psychologist?' and 'what type of clinical psychologist do I want to be?'. We have each been through the interview process this year. The book gave us a number of interesting

points to discuss in preparation of and in our interviews. For example, Jenkins considers the validity of evidence-based treatment, practitioners' differing perspectives on this, and the limited number of clinical psychologists actively engaged in research. This is a balanced and comforting perspective on the route to clinical training. It offers a space to ground yourself in what clinical psychology is and what it can be. It will be helpful at any stage of the journey - we all need to come back to these reflections occasionally."
