### Advanced Management Accounting (Text, Problems & Cases) DADYMINDS PUBLISHERS INSIDER

Essay from the year 2008 in the subject Business economics - Controlling, grade: 1,0, Åbo Akademi Universitat, Finland ( abo Akademi Universitat, Finland, Department of Business Studies), course: Essay on Accounting, language: English, abstract: A lot of particularly big companies are nowadays in the position to provide comprehensive information about critical business processes to decision-makers nearly in real-time with low additional efforts. Information about those processes can be traced through information technology, aggregated and analyzed and used for management decision-making. Still these possibilities are not fully recognized and realized. Aim of this work is therefore to examine the thesis that direct activity/process information must be taken into stronger account for management control and that the management accounting system must adopt the changing organizational and environmental realities by developing and implementing mechanisms to model the process perspective and integrating process information. The integration of process information enhances continuous improvement by providing up-to-date, and easy to understand and interpret measures on the local level that forces immanent response and leads to actions based on observable derivations from defined process objectives. After essential definitions about Management Accounting, Performance Measurement, and Business Process Management criticism on traditional performance measures is presented (chapter 3.1). Further, arguments that underpin the

need to change the Performance Measurement system according to the changes that are implied by a process-based view on the organization are given and aggregation issues are discussed (chapter 3.2). Afterwards, concepts for integrated Performance Measurement systems, e.g. based on the Balanced Scorecard and process measurement frameworks like SCOR or EFQM, that integrate process information are presented (chapter 3.3). In the last chapter (3.4) the opportunities and threats of information systems for a process-based Performance Measurement in general are discussed, and finally a number of recent approaches in academic research and practice to integrate process information in the Performance Measurement System, such as Process Mining and Business Activity Monitoring, are introduced. *Executive's Guide to IT Governance* John Wiley & Sons  
The ECOMAC project (Eco-management Accounting as a Tool of Environmental Management) has provided a framework for linking environmental management with management accounting. It was funded in Theme 4, 'Human Dimensions of Environmental Change' in the EU Environment and Climate Research Programme. The project is of high policy relevance by contributing to the on-going debate on eco management accounting, reporting and indicators. It is also an area needing further research. I would like to thank the research team, companies that participated as associated contractors, and the advisory panel. Jonathan Parker DG XII/D-5, European Commission  
Theme on Human Dimensions of Environmental Change 7 Preface  
The ECOMAC project This document is the final report on the project 'Eco-management accounting as a tool of environmental managementf (ECOMAC). This research project was conducted under the Environment and Climate Programme (Human Dimension of Environmental Change) of the European Commission (DG XII). The ECOMAC project investigated how companies are using or intend to use environmental costs and benefits figures in support of their decisions, and what they have been doing to remedy the limitations of conventional management accounting in this area. The research was largely explorative in nature, but the project also produced a structured overview of the subject and made suggestions and

recommendations as to how companies could improve their own environmental accounting.

To date, both internal and external corporate environmental reporting and management systems have focused on physical input-output measures. However, external stakeholders are increasingly demanding that organisations provide more financial information about the costs and benefits of their environmental actions. As environmental costs rise, internal decision-makers are

also seeking such information to ensure that money is well spent. Beyond basic compliance, many companies will not countenance environmental actions for which a "business case" cannot be made. A number of companies – such as Baxter, BT, Xerox, Zeneca and others – are now beginning to develop a better understanding of the costs and benefits of environmental action. The US Environmental Protection Agency has also done considerable work on models designed to understand the "full costs" of pollution control investments, with the aim of demonstrating that – when these are properly considered – pollution prevention can be a more cost-effective alternative. The Green Bottom Line brings together much of the world's leading research and best-practice case studies on the topic. Divided into four sections, covering "General Concepts", "Empirical Studies", "Case Studies" and "Implementation", the book includes case studies from the US EPA's Environment Accounting Programme and contributions from authors at institutions including the IMD, INSEAD, Tellus Institute and the World Resources Institute. It constitutes a state-of-the-art collection.
