Supreme Court Springer Science & Business Media

This volume reviews the current state of research on immune checkpoints and offers novel concepts.

It discusses the two most important immune checkpoints: T lymphocyte-associated antigen-4 (CTLA-4) and programmed cell death-1 (PD-1). It shows that antagonistic antibodies against these two molecules are highly effective in the treatment of various cancers and that PD-1 and CTLA-4 have been linked to the suppression of T-cell receptor signaling and co-stimulatory molecules. Further, the volume examines other agents, a number of cells, receptors and signaling molecules, that are also involved in the regulation of T-cell activation and extends the concept of immune checkpoints to "molecules and cells that negatively regulate T-cell activation". Playing essential roles in immune homeostasis, they could offer new targets for cancer immunotherapy, and for the therapy of autoimmune diseases. Written by internationally respected scientists, this book will appeal to basic scientists, clinicians, drug development researchers, and advanced students alike.

Reworking the Bench

Pearson South Africa

Suspense and tense interpersonal dynamics

characterize this taut bestselling novel set in the world of international humanitarian aid by Jean-Christophe Rufin, a co-founder of Doctors Without Borders. The four men who accompany Maud on an aid convoy couldn't be further from the clichéd idea of humanitarian volunteers. One by one, they reveal the secret wounds that have brought them to this conflict zone and, mile by mile, the true nature of their cargo becomes clear. Prize-winning author Jean-Christophe Rufin has written a powerful psychological literary thriller that asks vital questions about the role of humanitarian action, bringing to light the most fundamental dilemmas of our age. As a new kind of violence insinuates its way into the heart of Europe, this novel asks whether it is more effective to counter violence with benevolent acts and enlightenment ideals or to take up arms against the enemy. *Billboard* University of Toronto Press How do separatist conflicts arise and spread? When does separatism become a cover for a foreign aggression? How do local communities respond

when state institutions collapse, and militants take over? The armed conflict in Eastern Ukraine, which started eight years before Russia's full-scale invasion, contains unique evidence to address each of these questions. In *Seize the City, Undo the State*, Serhiy Kudelia offers an authoritative study of the conflict at its initial stage--2013-14--based on a meticulous comparison of mobilization dynamics in over dozen towns of Donbas as well as in two major cities outside of it: Kharkiv and Odesa. Through his extensive travels and numerous interviews with conflict witnesses and participants, Kudelia explains how a small group of Russian agents and local militants succeeded in eliminating state control over the largest and most densely urbanized region of Ukraine but failed to do it elsewhere. Kudelia challenges the conventional accounts of the armed conflict in Donbas, which portray it either as an interstate conflict entirely manufactured by Moscow or as a civil war that broke out without any external influence.

Instead, he argues that local actors prepared ideological and organizational basis for the uprising, but the successful spread of separatist control resulted from the covert intervention of Russian agents and widespread collaboration with them of town administrators and community activists. His findings also show that when enough members of local communities organized to resist militant takeovers, the separatist challenges there quickly dissipated. A fine-grained and highly original on-the-ground analysis of the origins of the wider Russian-Ukrainian war that broke out in 2022, this book offers broader insights into the conditions under which external intervention may trigger the rise of an armed insurgency in a society torn apart by political and ideological disagreements. *Network World* Springer This is the first book that addresses the issue of research notes for writing history of science in a comprehensive manner. Its case studies range from the early modern period to present and cover a broad range of different disciplines. The

contributions are based on papers presented at the workshop entitled "Reworking the Bench: Laboratory Notebooks in the History of Science", held at the Max Planck Institute for the History of Science in Berlin or written after the workshop.

Emerging Concepts Targeting Immune Checkpoints in Cancer and Autoimmunity

Plunkett Research, Ltd. The first edition of this dictionary, compiled by F.J.M. Wijnokus and published in 1967, was the result of years of systematic collection and preparation of thousands of terms and expressions which were until then not to be found in any other dictionary. The material was correlated for use in his daily work and, as the reputation of his private collection spread, there was an increasing demand for access to these findings. Until 1967 there was no comprehensive multilingual dictionary on the subject; former publications were incomplete and out of date and lacked clear definition - often leading to disastrous misunderstandings. Furthermore, the subject of printing, paper and ink

technology had never been dealt with, in dictionary form, in relation to other aspects of the graphic industry. This new work, prepared by F.J.M. Wijnekus and his son, has been considerably updated. Much time has been devoted to checking the material against the most reliable and authoritative sources. The usefulness of the work has been further enhanced by the addition of Spanish and Italian to the original languages of English, French and German. The first edition was received with much enthusiastic praise and this new dictionary will undoubtedly continue to be an invaluable tool for all those working with the printed word in the widest sense. It is a reference work which should be in the hands of all those in any way connected with the printing industry, paper manufacturers, ink manufacturers, printers, bookbinders, publishers, lithographers, lay-out men and graphical research institutes.

For more than 20 years, Network World has been the premier provider of information, intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations. Readers are responsible for designing, implementing and managing the voice, data and video systems their companies use to

support everything from business critical applications to employee collaboration and electronic commerce.

Hotel & Motel

Management VTAC

This volume explores the reorganisation of knowledge taking place in the course of Galileo's research process extending over a period of more than thirty years, pursued within a network of exchanges with his contemporaries, and documented by a vast collection of research notes. It has revealed the challenging objects that motivated and shaped Galileo's thinking and closely followed the knowledge reorganization engendered by these challenges. It has thus turned out, for example, that the problem of reducing the properties of pendulum motion to the laws governing naturally accelerated motion on inclined planes was the mainspring for the formation of Galileo's comprehensive theory of naturally accelerated motion.

Seize the City, Undo the State Europa Editions UK

For college, career, and university courses in Hotel and Motel Management and/or Front Desk Operations, usually offered in hospitality programs. Check-In Check-Out has been a leader in rooms management education and job-training for both two- and four-year educational institutions for over two decades. It has been used as a front-office text, an introductory text, a general resource, and a supplemental enrichment for courses in hotel accounting. Such versatility is possible because the book remains current, accurate, thorough, and professionally based. This first Canadian edition of Check-In Check-Out weighs each topic anew, matching it against the relevancy, accuracy, and importance of the times. Updated Canadian statistics and exhibits demonstrate the equally amazing growth that lodging has experienced in these past several years. Furthermore, the Canadian edition contains

new material on the vibrant history of Canada's hotel industry and the impact of the importation of American hotel chains on the Canadian hotel landscape. Content has been added on Canadian success stories, such as Canadian Pacific and Four Seasons, to demonstrate the dynamic nature of the hotel industry in Canada and the foresight of its pioneers.

Electronic Composition, Cost Comparison, Published by ... 1970

The English Galileo—the title of this book draws on the extraordinary prominence of Galileo Galilei in the historiography of the early modern Scientific Revolution. At the same time it questions the uniqueness of Galileo (not as a person, of course, but as an early modern phenomenon) by proclaiming another figure of his kind: Thomas Harriot. But putting Harriot on a pedestal next to Galileo is not a concern of this book, which is rather motivated by questions of the following kind: How did modern science come about? What were the processes of knowledge and concept transformation that led from premodern to

modern science, and, more specifically, from preclassical to classical mechanics? Which aspects of these developments rely on the peculiarities of particular historical actors and what aspects reflect more general characteristics of the knowledge system at the time and its potentials for development? To answer such questions it is obviously necessary to complement the existing studies on Galileo's science with studies on the work of his lesser-known contemporaries; and it is important that these studies are carried out in similar detail to make the different protagonists' work comparable. Without such comparison—this is the basic assumption of this book—our understanding of the shared knowledge of early modern thinking and the processes of knowledge transformation from which modern science emerged will remain incomplete and biased.
