St. Augustine was glad that God did not hold him responsible for his dreams. From which we may infer that his dreams must have been Öhuman, all too humanÖ and that he experienced a certain feeling of guilt on account of their nature. His attitude is one assumed by many people, laymen and scientists, some of them concealing it under a general scepticism as to dream interpretation. Few people are willing to concede as Nietzsche did, that Önothing is more genuinely ourselves than our dreams.Ö This is why the psychoanalytic pronouncement that dreams are the fulfilment of wishes meets with so much hostility. The man who has a dream of gross sex or ego gratification dislikes to have others think that the desire for such gross pleasure is a part of his personality. He very much prefers to have others believe that some extraneous agent, some whimsical power, such as the devil, forced such thoughts upon him while the unconsciousness of sleep made him irresponsible and defenceless. This is due in part to the absurd and barbarous idea that it is meet to inflict punishment for mere thoughts, an idea which is probably as deeply rooted in ignorant minds in our days as it was in the mind of the Roman emperor who had a man killed because the poor wretch dreamed of the ruler's death. We must not disclaim the responsibility for our unconscious thoughts as they reveal themselves through dreams. They are truly a part of our personality. But our responsibility is merely psychological; we should not punish people for harbouring in their unconscious the lewd or murderous cravings which the caveman probably gratified in his daily life; nor should we be burdened with a sense of sin because we cannot drive out of our consciousness certain cravings, biologically natural, but socially unjustifiable. The first prerequisite for a normal mental life is the acceptance of all biological facts. Biology is ignorant of all delicacy. The possible presence of broken glass, coupled with the fact that man lacks hoofs, makes it imperative for man to wear shoes. The man who is unconsolable over the fact that his feet are too tender in their bare state to tread roads, and the man who decides to ignore broken glass and to walk barefoot, are courting mental and physical suffering of the most useless type.

The handbook centers on detection techniques in the field of particle physics, medical imaging and related subjects. It is structured into three parts. The first one is dealing with basic ideas of particle detectors, followed by applications of these devices in high energy physics and other fields. In the last part the large field of medical imaging using similar detection techniques is described. The different chapters of the book are written by world experts in their field. Clear instructions on the detection techniques and principles in terms of relevant operation parameters for scientists and graduate students are given. Detailed tables and diagrams will make this a very useful handbook for the application of these techniques in many different fields like physics, medicine, biology and other areas of natural science.

In a crucial shift within posthumanistic media studies, Bernhard Siegert dissolves the concept of media into a network of operations that reproduce, displace, process, and reflect the distinctions fundamental for a given culture. Cultural Techniques aims to forget our traditional understanding of media so as to redefine the concept through something more fundamental than the empiricist study of a medium's individual or collective uses or of its cultural semantics or aesthetics. Rather, Siegert seeks to relocate media and culture on a level where the distinctions between object and performance, matter and form, human and nonhuman, sign and channel, the symbolic and the real are still in the process of becoming. The result is to turn ontology into a domain of all that is meant in German by the word Kultur. Cultural techniques comprise not only self-referential symbolic practices like reading, writing, counting, or image-making. The analysis of artifacts as cultural techniques emphasizes their ontological status as "in-betweens," shifting from firstorder to second-order techniques, from the technical to the artistic, from object to sign, from the natural to the cultural, from the operational to the representational. Cultural Techniques ranges from seafaring, drafting, and eating to the production of the sign-signal distinction in old and new media, to the reproduction of anthropological difference, to the study of trompe-l'oeils, grids, registers, and doors. Throughout, Siegert addresses fundamental questions of how ontological distinctions can be replaced by chains of operations that process those alleged ontological distinctions within the ontic. Grounding posthumanist theory both historically and technically, this book opens up a crucial dialogue between new German media theory and American postcybernetic discourses.
