This book provides a unique resource for registered nurses working in hospice palliative care at home and for the community, outside of acute care settings and also incorporates literature related to palliative care in acute health care settings, as part of the overall services and supports required. Very few resources exist which specifically address hospice palliative care in the home setting, despite the fact that most palliative care occurs outside acute care settings and is primarily supported by unpaid family caregivers. An overview of the concerns for individuals and families, as well as specific nursing interventions, from all ages would be an excellent support for nursing students and practicing registered nurses alike. The book structure begins with a description of the goals and objectives of hospice palliative care and the nursing role in providing excellent supportive care. Chapters include research findings and specifically research completed by the authors in the areas of pediatric palliative care, palliative care for those with dementia, and the needs of family caregivers in bereavement. Interventions developed by the editors are provided in this book, such as the "Finding Balance Intervention" for bereaved caregivers; the "Reclaiming Yourself" tool for bereaved spouses of partners with dementia; and The Keeping Hope Possible Toolkit for families of children with life threatening and life limiting illnesses. The development and application of these theory-based interventions are also highlighted. Videos and vignettes written by family caregivers about what was helpful for them, provide a patient-and family-centered approach. The book will benefit nursing students, educators and practicing registered nurses by providing information, theory, and evidence from research.

This book assists health care providers to understand the specific interplay of the roles and relationships currently forming the debates in pediatric clinical ethics. It builds on the fact that, unlike adult medical ethics, pediatric ethics begins within an acutely and powerfully experienced dynamic of patient-family-state-physician relationship. The book provides a unique perspective as it interacts with established approaches as well as recent developments in pediatric ethics theory, and then explores these developments further through cases. The book first focuses on setting the stage by introducing a theoretical framework and elaborating how pediatric ethics differ from non-pediatric

ethics. It approaches different theoretical frameworks in a critical manner drawing on their strengths and weaknesses. It helps the reader in developing an ability to engage in ethical reasoning and moral deliberation in order to focus on the wellbeing of the child as the main participant in the ethical deliberation, as well as to be able to identify the child's moral claims. The second section of the book focuses on the practical application of these theoretical frameworks and discusses specific areas pertaining to decision-making. These are: the critically ill child, new and enduring ethical controversies, and social justice at large, the latter of which includes looking at the child's place in society, access to healthcare, social determinants of health, and vaccinations. With the dynamic changes and challenges pediatric care faces across the globe, as well as the changing face of new technologies, no professional working in the field of pediatrics can afford not to take due note of this resource.
