It has many analogies drawn from everyday life to help non-science majors appreciate, on their own terms, what our modern exploration of the universe is revealing. The book can be used for either a one-semester or two-semester introductory course (bear in mind, you can customize your version and include only those chapters or sections you will be teaching.) It is made available free of charge in electronic form (and low cost in printed form) to students around the world. If you have ever thrown up your hands in despair over the spiraling cost of astronomy textbooks, you owe your students a good look at this one. Coverage and Scope

Aim High will help your students succeed
 as language learners in the classroom,
 with their homework and also in exams.
 How will it do this? It builds students
 vocabulary knowledge through a
 structured and progressive approach.
 What does this mean? There are over 50
 active vocabulary items in each unit,
 including words from the Oxford 3000TM.
 Students learn the meaning of new words
 but they also learn how and when to use
 them for themselves. And these are not
 just useful, everyday words. They're also
 introduced to expressions, idioms,
 phrasal verbs, and so on. Essential
 language for communicating well in
 English. As a teacher you'll want to help
 your students become autonomous

learners. In Aim High there are lots of
 opportunities to prepare for this. In the
 Student's Book there's a 'Dictionary
 Corner', with exercises to help them
 towards learner autonomy. There's also a
 Literacy Corner to extend their vocabulary,
 focusing on selected readers of the right
 level. With the self-check and review boxes
 they can see how they're progressing for
 themselves. A Grammar Reference and
 Grammar Builder bring together all the
 grammar and vocabulary for the unit.
 These allow students to look back over
 grammar points and review what they
 have learned.

Solutions: Intermediate: Student Book

"... a curriculum geared toward helping
 students gain skills in consciously
 regulating their actions, which in turn
 leads to increased control and problem
 solving abilities. Using a cognitive
 behavior approach, the curriculum's
 learning activities are designed to help
 students recognize when they are in
 different states called "zones," with each
 of four zones represented by a different
 color. In the activities, students also learn
 how to use strategies or tools to stay in a
 zone or move from one to another.
 Students explore calming techniques,
 cognitive strategies, and sensory supports
 so they will have a toolbox of methods to
 use to move between zones. To deepen
 students' understanding of how to self-
 regulate, the lessons set out to teach
 students these skills: how to read others'
 facial expressions and recognize a broader
 range of emotions, perspective about how
 others see and react to their behavior,
 insight into events that trigger their less
 regulated states, and when and how to
 use tools and problem solving skills. The
 curriculum's learning activities are
 presented in 18 lessons. To reinforce the
 concepts being taught, each lesson
 includes probing questions to discuss and
 instructions for one or more learning
 activities. Many lessons offer extension
 activities and ways to adapt the activity
 for individual student needs. The
 curriculum also includes worksheets, other
 handouts, and visuals to display and
 share. These can be photocopied from this
 book or printed from the accompanying
 CD."--Publisher's website.
