Global Development Horizons 2011

Springer

The rapid takeoff of the continent-sized national economies and the increasing expense of extraction have led to strong tensions in petrol prices and a race towards alternative driving systems. This book analyses the emergence of a second automobile revolution through the trajectories of automobile firms since the nineties.

The Automotive Industry and European Integration Cambridge University Press

Richard Hodges, one of Europe's preeminent archaeologists, has, throughout his career, transformed the way we understand the early Middle Ages; this volume pays tribute to him with a series of reflections on some of the themes and issues which have been central to his work over the last forty years.

Love, Lavender Pen Rizzoli International Publications

This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand the knowledge of scholars and policymakers

regarding how European integration and Brexit may impact future auto industry investment for all EU nations.

Venice and the Veneto during the Renaissance: the Legacy of Benjamin Kohl Renniks Publications

This new revised and updated edition is the ultimate buyer's/seller's/user's guide for American automobiles manufactured from 1805 to 1942. With more than 5,000 photos and histories of cars and their companies written by one of America's most respected automotive historians, this is the most extensive automobile reference available.

Over the past two decades, scholarship in architectural history has transformed, moving away from design studio pedagogy and postmodern historicism to draw instead from trends in critical theory focusing on gender, race, the environment, and more recently global history, connecting to revisionist trends in other fields. With examples across space and time—from medieval European coin trials and eighteenth-century Haitian revolutionary buildings to Weimar German construction firms and present-day African refugee camps—*Writing Architectural History* considers the impact of these shifting institutional landscapes and disciplinary positionings for architectural history. Contributors reveal how new methodological approaches have developed interdisciplinary research beyond the traditional boundaries of art history departments and architecture schools, and explore the challenges and opportunities presented by conventional and unorthodox forms of evidence and narrative, the tools used to write history.

How can management be developed to create the greatest wealth for society as a whole? This is the question Peter Drucker sets out to answer in *Innovation and Entrepreneurship*. A brilliant, mould-breaking attack on management orthodoxy it is one of Drucker's most important books, offering an excellent overview of some of his main ideas. He argues that what defines an entrepreneur is their attitude to change: 'the entrepreneur always searches for change, responds to it and exploits it as an opportunity'. To exploit change, according to Drucker, is to innovate. Stressing the importance of low-tech entrepreneurship, the challenge of balancing technological possibilities with limited resources, and the organisation as a learning organism, he concludes with a vision of an entrepreneurial society where individuals increasingly take responsibility for their own learning and careers. The Arab spring, protest movements in the EU, Russia, Turkey or elsewhere, are often labeled as twitter-revolutions. A crucial role is attributed to the new media, coverage of events abroad and ensuing mutual reactions. With the dissemination of print, revolts in early-modern times faced the challenge of a similar media-revolution. This influenced the very face of the events that could become full-fledged propaganda wars once the insurgents had won access to the printing press. But it also had an impact on revolt-narratives.

Governments severely persecuted dissident views in such delicate issues as revolts. Observers abroad had no such divided loyalties and were freer to reflect upon the events. Therefore, the book focuses mainly on representations of

revolts across borders.

Students and scholars of the Italian Renaissance easily fall under the spell of its achievements: its self-confident humanism, its groundbreaking scientific innovations, its ravishing artistic production. Yet many of the developments in Italian ceramics and glass were made possible by Italy's proximity to the Islamic world. *The Arts of Fire* underscores how central the Islamic influence was on this luxury art of the Italian Renaissance. Published to coincide with an exhibition at the Getty Museum on view from May 4 to August 5, 2004, *The Arts of Fire* demonstrates how many of the techniques of glass and ceramic production and ornamentation were first developed in the Islamic East between the eighth and twelfth centuries. These techniques - enamel and gilding on glass and tin-glaze and lustre on ceramics - produced brilliant and colourful decoration that was a source of awe and admiration, transforming these crafts, for the first time, into works of art and true luxury commodities. Essays by Catherine Hess, George Saliba, and Linda Komaroff demonstrate early modern Europe's debts to the Islamic world and help us better understand the interrelationships of cultures over time.

This is the first volume entirely

dedicated to contested languages. While generally listed in international language atlases, contested languages usually fall through the cracks of research: excluded from the literature on minority languages and treated as mere ensembles of geographically defined varieties by traditional dialectology. This volume investigates the nature of contested languages, the role language ideologies play in the perception of these languages, the contribution of academic discourse to the formation and perpetuation of language contestedness, and the damage contestedness causes to linguistic communities and ultimately to linguistic diversity. Various situations and degrees of language contestedness are presented and analysed, along with theoretical considerations, exploring potential roads to recognition and issues in language planning that arise from language contestedness. Addressing the "language vs dialect" question head on, the volume opens up new perspectives that are relevant to all students and researchers interested in the maintenance of linguistic diversity.

Benjamin G. Kohl (1938-2010) taught at Vassar College from 1966 till his retirement as Andrew W. Mellon Professor of the Humanities in 2001. His doctoral research at The Johns Hopkins University was directed by Frederic C. Lane, and his principal historical interests focused on northern Italy during the Renaissance, especially on Padua and Venice. His scholarly production includes the volumes *Padua under the Carrara, 1318-1405* (1998), and *Culture and Politics in Early Renaissance Padua* (2001), and the online database *The Rulers of Venice, 1332-1524* (2009). The database is eloquent testimony of his priority attention to historical sources and to their accessibility, and also of his enthusiasm for collaboration and sharing among scholars.

Financial Innovation and Resilience
Addison Wesley Publishing Company
As Ignazio Visco, Governor of the Bank of Italy, says in his Foreword, all economic policy makers today need to re-examine our history to help them confront the challenges of today. This edited volume focuses specifically on the theme of financial innovation and how financial resiliency was achieved in Naples. To highlight both the achievements of the public banks of Naples and their lessons for financial resiliency, the book focuses on financial crises and how they were

overcome in Naples in contrast to other European financial systems. The first section focuses on the development of the public banks unique to Naples. The second section compares those with other banking systems and how they responded to the same shock in 1622, caused by the full mobilization of European belligerents to finance their efforts in the Thirty Years War. The next section compares lessons learned in the rest of Europe over the next century and a half. The final section comes back to original start of the narrative arc to suggest ways that today's policymakers and thinkers could use the historical experience of the public banks of Naples to deal better with the ongoing problems stemming from the financial crisis of 2007-08.

Classic Engines, Modern Fuel Birkhäuser
This book tells you why and how. This book brings together a collection of popular articles previously published by the author in assorted car magazines. Based on in-depth research carried out at Manchester University, the articles investigate how classic engines respond to modern petrol/gasoline, and the results are presented in a way that any enthusiast can understand. One chapter ranks some brands and grades of modern petrol/gasoline, helping you choose the best type for your vehicle, while other chapters present the findings that debunk some of the myths about petrol/gasoline and engines. Real data is provided to help you tune your classic vehicle, ensuring that it runs as it should, allowing you to experience the pleasure of driving your classic car instead of worrying about it breaking down. The appendix gives a down-to-

earth description of how to rebuild and tune SU and similar carburettors. Paul Ireland's years of experience and no-nonsense scientific approach will help you get the best from your classic car.
