ALEX STEPHENSON

Unlocking Medical Terminology 2nd EditionThe popliteus muscle
in the leg is used for unlocking the knees when walking, by

laterally rotating the femur on the tibia during the closed chain portion of the gait cycle (one with the foot in contact with the ground). In open chain movements (when the involved limb is not in contact with the ground), the popliteus muscle medially rotates the tibia on the femur. Popliteus muscle - Wikipedia

Cryptography or cryptology (from Ancient Greek: κρυπτός, romanized: kryptós "hidden, secret"; and γράφειν graphein, "to write", or -λογία-logia, "study", respectively) is the practice and study of techniques for secure communication in the presence of third parties called adversaries. More generally, cryptography is about constructing and analyzing protocols that prevent ...

My Story Since the beginning of time, a mother's primary role has been to protect her young. It's a role

that most mothers take very seriously. When the medical community introduced vaccines to protect children from the ravages of disease, it was only natural for mothers to want their children protected. Vaccine Truth - My story
