Res. 46 John Wiley & Sons *How to Write a Masters Thesis* is a comprehensive manual on how to conceptualize and write a five-chapter masters thesis, including the introduction, literature review, methodology, results, and discussion. Very often, a theory-practice gap exists for students who have taken the

prerequisite methods and statistics courses in their masters program but who have yet to understand how to apply and translate what they've learned about the research process with their first major project. Yvonna Bui demystifies this process by integrating the language learned in these prerequisite courses into a step-by-step guide for developing one's own thesis/project. *Consent and Confidentiality*

The overriding theme of *Group Work: Processes and Applications* is a focus on the specialized group work that counselors perform from a systemic perspective in a multicultural context. This text briefly covers traditional theoretical approaches, focusing more on the techniques and

applications of the approaches, but the core of the text involves the systemic approach to group work: preparing group leaders to facilitate the systemic group process, from planning the group through the four stages of group work: forming and orienting, transition, working, and termination. The content is aligned with 2016 CACREP standards. Numerous other techniques, covered, are linked with specific theoretical orientations. PowerPoints and Instructor's manual are on the way and should be available in the next 2-3 months.  The Practice of Qualitative Research

provides students with a "hands-on" introduction to qualitative research methods through the use of in-depth examples and out-of-class exercises. Rather than separating theory from methods and presenting students with a laundry list of methods as so many texts do, authors Sharlene Nagy Hesse-Biber and Patricia Leavy provide readers with a holistic approach to research by tightly linking

theory and methods throughout the book. The authors cover all the key mainstream qualitative methods, as well as a number of more unconventional ones such as oral history, visual and unobtrusive methods, and present an overview of mixed-methods approaches. As part of their discussion of the ethical issues underpinning all social research, the authors raise

important issues concerning the problems and prospects novice researchers confront in researching human subjects. The Practice of Qualitative Research is designed for advanced undergraduate and graduate students studying qualitative research in the social sciences- especially Sociology, Women's Studies, Psychology, Anthropology, and

Communications. The book presents a feminist research perspective and follows the interpretivist approach to qualitative methods, making it is an invaluable text for any course in which these are core components. The candid wisdom and tips from leading researchers will help students with the day-to-day process of completing a successful research project. Book

Principles and Practice of

Laser

Dentistry - E-

Book Oxford University Press

Examining trans-healthcare as a key site through which struggles for health and justice take shape Over the past two decades, medical and therapeutic approaches to

transgender patients have changed radically, from treating a supposed pathology to offering gender-affirming care. Based on ethnographic fieldwork in New York City and Buenos Aires, Care without Pathology moves across the Americas to show how trans-health activists have taken on the project of depathologization. In New York, Christoph Hanssmann examines activist

attempts to overturn bans on using public health dollars to fund trans-health care. In Argentina, he traces how trans-activists marshaled medical statistics and personal biographies to reveal state violence directed against trans-people and travestis. Hanssmann also demonstrates the importance of understanding transphobia in the broader context of gendered racism,

ableism, and antipoverty, arguing for the rise of a thoroughly coalition-based mass mobilization. Care without Pathology highlights the distributive arguments activists made to access

state funding for health care, combating state arguments that funding trans- health care is too specialized, too expensive, and too controversial. Hanssmann

situates trans-health as a crucible within which sweeping changes are taking place—with potentially far-reaching effects on the economic and racial barriers to accessing care.
