 Pathogens for War explores how Canada and its allies have attempted to deal with the threat of germ warfare, one of the most fearful weapons of mass destruction, since the Second World War. In addressing this subject, distinguished historian Donald Avery investigates the relationship between bioweapons, poison gas, and nuclear devices, as well as the connection between bioattacks and natural disease pandemics. Avery emphasizes the crucially important activities of Canadian biodefence scientists – beginning with Nobel Laureate Frederick Banting – at both

the national level and through cooperative projects within the framework of an elaborate alliance system. Delving into history through a rich collection of declassified documents, Pathogens for War also devotes several chapters to the contemporary challenges of bioterrorism and disease pandemics from both national and international perspectives. As such, readers will not only learn about Canada's secret involvement with biological warfare, but will also gain new insights into current debates about the peril of bioweapons – one of today's greatest threats to world peace.

 Discover thirty-five secrets that the media, US government, and Big Pharma don't want you to know about vaccines. Measles! We all have seen or heard the scary stories about "outbreaks" in the

media. It has even been declared a "public health emergency" at various times. Is it true? Are we and our children at risk? The Measles Book: Thirty-Five Secrets the Government and the Media Aren't Telling You about Measles and the Measles Vaccine will help you answer these questions. You will find out if this is just another example of the media, government, and industry misleading us or whether we really have a lot to worry about. The Measles Book presents reliable medical information from the most credible sources available. It is intended to help you make an informed choice about vaccinating your child. The main focus is measles, but many of the issues are relevant to other childhood vaccines. Within the book's pages, the reader will discover thirty-five secrets being kept from the general public about childhood

vaccines, especially the measles vaccine. Just a sampling of these secrets include: Vaccines are not safe for every child and the government and pharmaceutical companies have known this for years. Some children will get injured or die from vaccines and the government and pharmaceutical companies know this, too. Pharmaceutical companies have developed an incredible way to make money from vaccines, and not be held accountable. When a child is injured or killed by a vaccine, the pharmaceutical company does not pay for the damage it caused—we do! Learn the other thirty-one secrets when you read *The Measles Book* by Children's Health Defense, a nonprofit organization committed to the health of our children and challenging misinformation spread by Big Pharma, the government, and the media. The information in *The Measles Book* is vital for parents to know so they can make informed decisions for their children.

A Vaccine Simon and Schuster

In 1976, a small group of soldiers at Fort Dix were infected with a swine flu virus that was deemed similar to the virus responsible for the great 1918-19 worldwide flu pandemic. The U.S. government initiated an unprecedented effort to immunize every American against the disease. While a qualified success in terms of numbers reached—more than 40 million Americans received the vaccine—the disease never reappeared. The program was marked by controversy, delay, administrative troubles, legal complications, unforeseen side effects and a progressive loss of credibility for public health authorities. In the waning days of the flu season, the incoming Secretary of what was then the Department of Health, Education and Welfare, Joseph Califano, asked Richard Neustadt and Harvey Fineberg to examine what happened and to extract lessons to help cope with similar situations in the future.

When troops went to the Middle East to fight the Gulf War in 1991 & the Iraq War in 2003, they were immunized with the only FDA-approved anthrax vaccine in existence -- or at least they were supposed to be. A number of them, perhaps thousands, received an experimental vaccine instead. Without their knowledge or consent, they were used as human guinea pigs in a massive medical experiment -- that went disastrously wrong -- & yet continues today. To boost the vaccine's effectiveness, military scientists added an oil called squalene to stimulate the immune system. What they didn't know,

but should have known, is that squalene causes autoimmune diseases: chronic & even life-threatening illnesses like lupus, crippling arthritis, & MS.

Since the 1950s the prevalence of the so-called 'diseases of civilisation' has continued to skyrocket in Western countries. Today, as the same story is beginning to be repeated in newly industrialised nations, modern diseases are reaching pandemic proportions. Why has this happened? The medical profession's spin is that the culprit is the aging of the population. But, as *Cry for Health* (Vol 1) reveals, there is overwhelming evidence for why our populations are ailing, evidence health authorities and governments have chosen to ignore, or have refused to acknowledge, or have kept hidden from the public to keep them clueless to the real culprits: many modern technologies and our modern lifestyles.

Public health officials state that vaccines are safe and effective, but the truth is far more complicated. Vaccination is a serious medical intervention that always carries the potential to injure and cause death as well as to prevent disease. Coercive vaccination policies deprive people of free and informed consent—the hallmark of ethical medicine. Americans are increasingly concerned about vaccine safety and the right to make individual, informed choices together with their healthcare practitioners. *Vaccine Epidemic* focuses on the searing debate surrounding individual and parental vaccination choice in the United States. Habakus, Holland, and Rosenberg edit and introduce a diverse array of interrelated topics concerning the explosive vaccine controversy, including the ethics of vaccination mandates, corrupting conflicts of interest in the national vaccine program, and personal narratives of parents, children, and soldiers who have suffered vaccine injury. Newly updated with additional chapters focusing on institutional scientific misconduct, mandates for healthcare workers, concerns about HPV vaccine development, and the story behind the Supreme Court's recent vaccine decision, *Vaccine Epidemic* remains the essential handbook for the vaccination choice movement and required reading for all people

contemplating vaccination for themselves and their children.

Biohazard Skyhorse

December 13, 2002, the president of the United States announced that smallpox vaccination would be offered to some categories of civilians and administered to members of the military and government representatives in high-risk areas of the world. The events that precipitated that historic announcement included a series of terrorist attacks during the 1990s, which culminated in the catastrophic events of 2001. Although preparedness for deliberate attacks with biologic weapons was already the subject of much public health planning, meetings, and publications as the twentieth century neared its end, the events of 2001 led to a steep rise in bioterrorism-related government policies and funding, and in state and local preparedness activities, for example, in public health, health care, and the emergency response and public safety communities. The national smallpox vaccination program is but one of many efforts to improve readiness to respond to deliberate releases of biologic agents. The Institute of Medicine (IOM) Committee on Smallpox Vaccination Program Implementation was convened in October 2002 at the request of the Centers for Disease Control and Prevention (CDC), the federal agency charged with implementing the government's policy of providing smallpox vaccine first to public health and health care workers on response teams, then to all interested health care workers and other first responders, and finally to members of the general public who might insist on receiving the vaccine. The committee was charged with providing "advice to the CDC and the program investigators on selected aspects of the smallpox program implementation and evaluation." The committee met six times over 19 months and wrote a series of brief "letter" reports. The Smallpox Vaccination Program: Public Health in an Age of Terrorism constitutes the committee's seventh and final report, and the committee hopes that it will fulfill three purposes: 1) To serve as an archival document that brings together the six reports addressed to Julie Gerberding, director of CDC, and previously released on line and as short, unbound papers; 2) To serve as a historical document that summarizes milestones in the smallpox vaccination program, and ; 3) To comment on the achievement of overall goals of the smallpox vaccination program (in accordance with the last item in the charge), including lessons learned from the program.

Revelation Simon and Schuster

In this provocative look at the US military from the Persian Gulf War through the 2003 invasion of Iraq, investigative journalist Gary Matsumoto contends that an anthrax vaccine dispensed by the Department of Defense was the cause of Gulf War Syndrome and the origins of a massive cover-up. Matsumoto calls it the worst friendly-fire incident in military history. A skillfully-woven narrative that serves as a warning about this man-made epidemic, Vaccine A is a much needed account of just what went wrong, and why.

Vaccine Epidemic Cosimo Reports

A thoughtful evaluation of the vaccine debate, its history, and its consequences. Since 1990, the number of mandated vaccines has increased dramatically. Today, a fully vaccinated child will have received nearly three dozen vaccinations between birth and age six. Along with the increase in number has come a growing wave of concern among parents about the unintended side effects of vaccines. In Vaccine, Mark A. Largent explains the history of the debate and identifies issues that parents, pediatricians, politicians, and public health officials must address. Nearly 40% of American parents report that they delay or refuse a recommended vaccine for their children. Despite assurances from every mainstream scientific and medical institution, parents continue to be haunted by the question of whether vaccines cause autism. In response, health officials herald vaccines as both safe and vital to the public's health and put programs and regulations in place to encourage parents to follow the recommended vaccine schedule. For Largent, the vaccine-autism debate obscures a constellation of concerns held by many parents, including anxiety about the number of vaccines required (including some for diseases that children are unlikely ever to encounter), unhappiness about the rigorous schedule of vaccines during well-baby visits, and fear of potential side effects, some of them serious and even life-threatening. This book disentangles competing claims, opens the controversy for critical reflection, and provides recommendations for moving forward.

Vaccination Controversies Macmillan + ORM

Jonas Salk's polio vaccine has taken on an almost legendary quality as a medical miracle, for it largely eradicated one of the most feared diseases of the 20th century. But the story of the vaccine has a dark side, one that has never been fully told before... Between 1954 and 1963, close to 98 million Americans received polio vaccinations contaminated with a carcinogenic monkey virus, now known as SV40. A concerted government effort downplayed the incident, and it was generally accepted that although oncogenic to laboratory animals, SV40 was harmless to humans. But now SV40 is showing up in human cancers, and prominent researchers are demanding a serious public health response to this forgotten polio vaccine contaminant. A

gripping medical detective story, The Virus and the Vaccine raises major questions about vaccine policy.

The Malaria Project Skyhorse Publishing, Inc.

In the 1990s reported autism cases among American children began spiking, from about 1 in 10,000 in 1987 to a shocking 1 in 166 today. This trend coincided with the addition of several new shots to the nation's already crowded vaccination schedule, grouped together and given soon after birth or in the early months of infancy. Most of these shots contained a little-known preservative called thimerosal, which includes a quantity of the toxin mercury. Evidence of Harm explores the heated controversy over what many parents, physicians, public officials, and educators have called an "epidemic" of afflicted children. Following several families, David Kirby traces their struggle to understand how and why their once-healthy kids rapidly descended into silence or disturbed behavior, often accompanied by severe physical illness. Alarmed by the levels of mercury in the vaccine schedule, these families sought answers from their doctors, from science, from pharmaceutical companies that manufacture vaccines, and finally from the Center for Disease Control and the Food and Drug Administration—to no avail. But as they dug deeper, the families also found powerful allies in Congress and in the small community of physicians and researchers who believe that the rise of autism and other disorders is linked to toxic levels of mercury that accumulate in the systems of some children. An important and troubling book, Evidence of Harm reveals both the public and unsung obstacles faced by desperate families who have been opposed by the combined power of the federal government, health agencies, and pharmaceutical giants. From closed meetings of the FDA, CDC, and drug companies, to the mysterious rider inserted into the 2002 Homeland Security Bill that would bar thimerosal litigation, to open hearings held by Congress, this book shows a medical establishment determined to deny "evidence of harm" that might be connected with thimerosal and mercury in vaccines. In the end, as research is beginning to demonstrate, the questions raised by these families have significant implications for all children, and for those entrusted to oversee our national health.

A Shot to Save the World Routledge
The explosive true story of fraud, embezzlement, and government betrayal. In 2000, the US Centers for Disease Control (CDC) carried out a secret mission

to bury, skew, and manipulate data in six vaccine safety studies, in a coordinated effort to control the message that “vaccines do not cause autism.” They did so via secret meetings and backtesting health-care data. The CDC invested tens of millions of dollars in a foreign health-care data analytics startup run by Danish scientist Poul Thorsen, a move to ensure that no link ever surfaced. But fate had other ideas. The agency soon learned it couldn’t control Thorsen. In 2011, the US Justice Department indicted him for the theft of more than \$1 million of CDC grant money. *Master Manipulator* exposes the CDC’s hidden agenda for the cover-up. Influenced by Big Pharma money, future high-paying jobs, and political lobbyists, CDC executives charted a course different than what the findings of earlier vaccine safety studies revealed. The CDC needed an outsider to “flatten” the results of the data, while building an exit strategy: a fall guy in case the secret plan was exposed. Thorsen fit the bill nicely, conducting studies overseas. But the CDC’s plan backfired, as Thorsen took the money to the bank and the power went to his head. It would take years for his fraud scheme—funneling CDC grant money to a Danish university and then back to a CDC bank account he controlled—to play out. *Master Manipulator* is a true story of fraud and betrayal, and an insider’s view of what takes place behind the closed doors of agencies and drug companies, and with the people tasked to protect the health of American children. It’s a cautionary tale of the dangers of blind trust in the government and the health-care industry. *Pathogens for War* Reaktion Books

A fascinating and shocking historical exposé, *The Malaria Project* is the story of America’s secret mission to combat malaria during World War II—a campaign modeled after a German project which tested experimental drugs on men gone mad from syphilis. American war planners, foreseeing the tactical need for a malaria drug, recreated the German model, then grew it tenfold. Quickly becoming the biggest and most important medical initiative of the war, the project tasked dozens of the country’s top research scientists and university labs to find a treatment to remedy half a million U.S. troops incapacitated by malaria. Spearheading the new U.S. effort was Dr. Lowell T. Coggeshall, the son of a poor Indiana farmer whose persistent drive and curiosity led him to become one of the most innovative thinkers in solving the malaria problem. He recruited private corporations, such as today’s Squibb and Eli Lilly, and the nation’s best chemists out

of Harvard and Johns Hopkins to make novel compounds that skilled technicians tested on birds. Giants in the field of clinical research, including the future NIH director James Shannon, then tested the drugs on mental health patients and convicted criminals—including infamous murderer Nathan Leopold. By 1943, a dozen strains of malaria brought home in the veins of sick soldiers were injected into these human guinea pigs for drug studies. After hundreds of trials and many deaths, they found their “magic bullet,” but not in a U.S. laboratory. America’s best weapon against malaria, still used today, was captured in battle from the Nazis. Called chloroquine, it went on to save more lives than any other drug in history. Karen M. Masterson, a journalist turned malaria researcher, uncovers the complete story behind this dark tale of science, medicine and war. Illuminating, riveting and surprising, *The Malaria Project* captures the ethical perils of seeking treatments for disease while ignoring the human condition.

In *Jackals: The Stench of Fascism*, journalist and author Alex Constantine explores today’s fascism and its historical roots. He cites numerous examples of current fascist terrorism such as Oklahoma City bomber Timothy McVeigh; Kevin William Hardham, the 36-year-old Army field artillery veteran who planted a bomb along the Martin Luther King Day unity parade route in Spokane, Washington in 2011; Pittsburgh cop killer and white supremacist Richard Paplowski; neo-Nazi Keith Luke of Brockton, Massachusetts, arrested after shooting and killing three immigrants from Cape Verde; and antigovernment militiaman Joshua Cartwright, who murdered a pair of sheriff’s deputies in Okaloosa County, Florida in 2009; as well as countless others.
