Isolation,
Characterization, and
Utilization of T
Lymphocyte Clones is a
summary of
information regarding
T lymphocyte clones,
including their
usefulness. Organized
into nine parts, the
book begins with
discussions on the
soluble factors that can
influence the growth of
cloned T cells and the
utilization of T cell
hybridomas for
analysis of T cell
functions, emphasizing

the biochemical and
functional properties of
helper and suppressor
factors. The book then
looks into the analysis
of T cell clones and
hybridomas using
techniques of somatic
cell genetics. The
clonal analysis by
limiting dilution, the
characteristics of
murine T cell clones
reactive with
alloantigens and
soluble antigens, and
the human T cell
clones are described as
well. This volume is
valuable to those
interested in the field
of cloning of
immunocompetent T
cells.

This acclaimed text has been fully revised and updated, now incorporating issues including aging of the reproductive system, and updates on the chapters on conception and Gamete Transport and Fertilization, and Pregnancy. Human Reproductive Biology, Third Edition emphasizes the biological and biomedical aspects of human reproduction, explains advances in reproductive science and discusses the choices and concerns of today. Generously illustrated in full color, the text provides current information about human

reproductive anatomy and physiology. The ideal book for courses on human reproductive biology - includes chapter introductions, sidebars on related topics of interest, chapter summaries and suggestions for further reading. All material completely updated with the latest research results, methods, and topics now organized to facilitate logical presentation of topics. New chapters on Reproductive Senescence, Conception: Gamete Transport, Fertilization, Pregnancy: Maternal Aspects and Pregnancy: Fetal Development. Full color illustrations. Men's Issues and Men's Mental Health Frontiers E-books This encyclopedia

spans the relationships among business, ethics and society, with an emphasis on business ethics and the role of business in society.

The burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities.

However, in spite of being based on the premise of investigating the neural bases of interacting minds, the majority of studies have focused on studying brains in isolation using paradigms that investigate offline social cognition, i.e. social cognition from a detached observer's point of view, asking study participants to

read out the mental states of others without being engaged in interaction with them. Consequently, the neural correlates of real-time social interaction have remained elusive and may —paradoxically— represent the 'dark matter' of social neuroscience. More recently, a growing number of researchers have begun to study online social cognition, i.e. social cognition from a participant's point of view, based on the assumption that there is something fundamentally different when we are actively engaged with others in real-time social interaction as compared to when we merely observe them. Whereas, for offline social cognition, interaction and

feedback are merely a way of gathering data about the other person that feeds into processing algorithms 'inside' the agent, it has been proposed that in online social cognition the knowledge of the other—at least in part—resides in the interaction dynamics 'between' the agents. Furthermore being a participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition. In order to promote the development of the neuroscientific investigation of online social cognition, this Frontiers Research

Topic aims at bringing together contributions from researchers in social neuroscience and related fields, whose work involves the study of at least two individuals and sometimes two brains, rather than single individuals and brains responding to a social context. Specifically, this Research Topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms. Here, an important focal point will be to address the various roles of social interaction in contributing to and—at times—constituting our awareness of other

minds. For this Research Topic, we, therefore, solicit reviews, original research articles, opinion and method papers, which address the investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so. While focusing on work in the neurosciences, this Research Topic also welcomes contributions in the form of behavioral studies, psychophysiological investigations, methodological innovations, computational approaches, developmental and patient studies. By focusing on cutting-edge research in social neuroscience and related fields, this Frontiers Research

Topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social neuroscience to really go social.

Although the authors pay particular attention to reproductive behavior, from initial recognition and evaluation of potential partners to decisions about reproduction, they also deal with other survival behaviors.

Medieval Douai was one of the wealthiest cloth towns of Flanders, and it left an enormous archive documenting the personal financial affairs of its citizens—wills, marriage agreements, business contracts, and records of court disputes over property rights of all kinds. Based on extensive research in this archive, this book reveals how these documents were produced in a centuries-long effort to regulate—and ultimately to redefine—property and gender relations. At the center of the transformation was a shift from a marital property regime based

on custom to one based on contract. In the former, a widow typically inherited her husband's property; in the latter, she shared it with or simply held it for his family or offspring. Howell asks why the law changed as it did and assesses the law's effects on both social and gender meanings but she insists that the reform did not originate in general dissatisfaction with custom or a desire to disempower widows. Instead, it was born in a complex economic, social and cultural history during which Douaisiens gradually came to think about both property and gender in new ways.

Despite the stodgy stereotypes, libraries

and librarians themselves can be quite funny. The spectrum of library humor from sources inside and outside the profession ranges from the subtle wit of the *New Yorker* to the satire of *Mad*. This examination of American library humor over the past 200 years covers a wide range of topics and spans the continuum between light and dark, from parodies to portrayals of libraries and their staffs as objects of fear. It illuminates different types of librarians--the collector, the organization person, the keeper, the change agent--and explores stereotypes like the shushing little old lady with a bun, the male scholar-librarian, the library superhero, and

the anti-stereotype of the sexy librarian. Profiles of the most prominent library humorists round out this lively study. *The Laughing Librarian*

"An immensely useful manual with many attractive features: comprehensive and lucid keys, precise diagrams, annotated checklists and up-to-date references. ... there is no doubt that it should be seen as an example of the type of manual which is so badly needed in the study of the fauna of many shores around the world."--*Journal of Animal Ecology*
"Congratulations to the editors, contributors, and publisher for a job well done. The third edition has been rewritten, corrected, and enlarged, so that

while retaining the basic organization of the earlier ones, it is more useful, informative and up-to-date. The meticulous scholarship of Smith and Carlton is just what the revision needed."-- Systematic Zoology "This revision should serve for many years. It is therefore particularly commendable that the editing has been meticulous, perhaps flawless. ... thanks are due to the many contributors for a job well done."--The Quarterly Review of Biology "As the Pacific Coast intertidal zone undergoes increasingly profound changes, knowing the sentinel invertebrates can foretell the future of the sea, and hence, of our species. Jim Carlton's hefty new

update of The Light & Smith Manual, the comprehensive compendium of who's who between the tides, is the best and quickest way to do so."--Elliot A. Norse, President, Marine Conservation Biology Institute "This much-anticipated modernization of "Light's Manual" is an astonishing accomplishment, blending state-of-the-art taxonomy with profusely illustrated and user-friendly keys to who's whom on marine shores from its stated boundaries of mid-California through Oregon, and clearly, much further north. It's also an informative, well referenced read. Marine biologists should not leave home without it."--Robert Paine, Professor

Emeritus of Biology, University of Washington "At this time of environmental change and loss of biodiversity, species identification has never been more important. The fourth edition of Light and Smith is more than just a field guide--it is a masterwork of research and description with a strong focus on morphological detail. No other book has such a broad scope, newly expanded to include even the most obscure taxa. The revised keys and beautiful anatomical illustrations make this classic guide more indispensable than ever. As taxonomists become extinct, there are fewer students to receive the vast body of knowledge

accumulated by generations of careful study. I hope that the beauty and depth of this guide will inspire a generation of young scientists to continue this critical taxonomic work. It will have a place of honor in all marine labs."--Paul K. Dayton, Scripps Institution of Oceanography

 Anti-violence movements rooted in identity politics are commonplace, including those to stop violence against people of color, women, and LGBT people. *Unlivable Lives* reveals the unintended consequences of this approach within the transgender rights movement in the United States. It

illustrates how this form of activism obscures the causes of and lasting solutions to violence and exacerbates fear among members of the identity group, running counter to the goal of making lives more livable. Analyzing over a thousand documents produced by thirteen national organizations, Westbrook charts both a history of the movement and a path forward that relies less on identity-based tactics and more on intersectionality and coalition building. Provocative and galvanizing, this book envisions new strategies for anti-violence and social justice movements and will revolutionize the way we think about this form of activism.

This book will serve as an introduction to Botany to the beginners in this field. *Fur Trade Journal of Canada* McFarland Traditionally, men's mental health woes have been attributed to male stubbornness and rigid notions of masculinity. However, there is growing recognition that mental health issues in men are socially determined by a range of factors including family, educational, occupational, and legal issues. These and a

variety of other social issues have been collectively labelled 'men's issues' and are being increasingly linked to negative men's mental health outcomes. This book gives an overview of men's mental health as well as related men's issues, adopting a public-health-inspired approach examining the research linking social exposures and mental health outcomes. The book is unique in that it synthesizes and explores men's issues, men's mental health, and social determinants in a holistic and integrated manner through assessment of the social scientific and psychiatric literature. In this book, the author discusses the social determinants of men's

mental health and accompanying psychosocial interventions, moving beyond one-dimensional discussions of masculinity. Among the topics covered are: The Social Determinants of Male Suicide Attention-Deficit/Hyperactivity Disorder in Young Males: The Medicalization of Boyhood? Why Do Men Have Low Rates of Formal Mental Health Service Utilization? An Analysis of Social and Systemic Barriers to Care, and Discussion of Promising Male-Friendly Practices The Gender Gap in Education: Understanding Educational Underachievement in Young Males and its Relationship to Adverse Mental Health

Employment, Unemployment and Workplace Issues in Relation to Men's Mental Health Men's Issues and Men's Mental Health: An Introductory Primer is essential reading for healthcare practitioners and social service providers including psychiatrists, psychologists, social workers, occupational therapists, counsellors, teachers, charity workers, health promotion specialists, and public health officers. It is also a useful text for graduate and advanced undergraduate students in health care, social services, public health, epidemiology and social sciences, particularly sociology, psychology, and gender studies. Finally,

the book can be read and understood by an intelligent lay reader, making it accessible for the wider public.

The present volume is a collection of fifteen original articles that include descriptive, typological and/or theoretical studies of a number of morphosyntactic phenomena, such as case, transitivity, grammaticalization, valency alternations, etc., in a variety of languages or language groups, and discussions concerning theoretical issues in specific grammatical frameworks. The collection, written in honor of the Australian linguist Barry J. Blake on his 60th birthday, thematically reflects

the field that Professor Blake has worked in over the past three decades. The volume will be of special interest to researchers in morphosyntax, and linguistic typology. In addition, scholars in discourse grammar, historical linguistics, theoretical syntax, semantics, language acquisition, and language contact will find articles of interest in the book.

Male Reproductive Function gives an up-to-date review on the physiology and disease processes associated with the male reproductive system.

The first few chapters describe the regulation of the functions of the testis and the integration of its components: germ cells, Sertoli cells and Leydig cells. This is followed by a description of puberty

and aging, and the disorders or dysfunction that may be associated with these physiological processes. Discussions on the current methods for the diagnosis and treatment of male hypogonadism, male infertility and male sexual dysfunction follow, with detailed descriptions of types of androgen replacement and the benefits and risks of such treatment. The book concludes with the development of male contraception and the possible influence of the environment on the male reproductive system. Male Reproductive Function represents a conglomeration of the efforts of experts in andrology from all over the world, both in basic cellular/molecular

biology as well as in clinical science and practice. This book is suitable for endocrinologists, urologists, general internists, gynecologists and other students in the field of male reproduction.

Anger is not just ubiquitous, it is also popular. Many people think it is impossible to care sufficiently for justice without anger at injustice. Many believe that it is impossible for individuals to vindicate their own self-respect or to move beyond an injury without anger. To not feel anger in those cases would be considered suspect. Is this how we should

think about anger, or is anger above all a disease, deforming both the personal and the political? In this wide-ranging book, Martha C. Nussbaum, one of our leading public intellectuals, argues that anger is conceptually confused and normatively pernicious. It assumes that the suffering of the wrongdoer restores the thing that was damaged, and it betrays an all-too-lively interest in relative status and humiliation. Studying anger in intimate relationships, casual daily interactions, the workplace, the criminal justice system, and movements for social transformation, Nussbaum shows that anger's core ideas are both infantile and harmful. Is forgiveness

the best way of transcending anger? Nussbaum examines different conceptions of this much-sentimentalized notion, both in the Jewish and Christian traditions and in secular morality. Some forms of forgiveness are ethically promising, she claims, but others are subtle allies of retribution: those that exact a performance of contrition and abasement as a condition of waiving angry feelings. In general, she argues, a spirit of generosity (combined, in some cases, with a reliance on impartial welfare-oriented legal institutions) is the best way to respond to injury. Applied to the personal and the political realms, Nussbaum's profoundly

insightful and erudite view of anger and forgiveness puts both in a startling new light. Human Development from Middle Childhood to Middle Adulthood New Saraswati House India Pvt Ltd This seminal work focuses on human development from middle childhood to middle adulthood, through analysis of the research findings of the groundbreaking Jyvaskylä Longitudinal Study of Personality and Social Development (JYLS). The JYLS project, which began in 1968, has generated extensive publications over many years but this is the first comprehensive summary that presents the conceptual framework, the research design and methodology, and the

findings. The study looks at the development over time of issues related to personality, identity, health, anti-social behavior, and well-being and is unparalleled in its duration, intensity, comprehensiveness and psychological richness. The thorough synthesis of this study illustrates that there are different paths to adulthood and that human development cannot be described in average terms. The 42-year perspective that the JYLS provides shows the developmental consequences of children's differences in socioemotional behavior over time, and the great significance of children's positive socioemotional

behavior for their further development until middle age. Not only will the book be an invaluable tool for those considering research methods and analysis on large datasets, it is ideal reading for students on lifespan courses and researchers methodologically interested in longitudinal research.

This book emphasizes
the statistical concepts
and assumptions
necessary to describe

and make inferences about real data. Throughout the book the authors encourage the reader to plot and examine their data, find confidence intervals, use power analyses to determine sample size, and calculate effect sizes. The goal is to ensure the reader understands the underlying logic and assumptions of the analysis and what it tells them, the limitations of the analysis, and the possible consequences of violating assumptions. The simpler, less abstract discussion of analysis of variance is presented prior to developing the more general model. A concern for alternatives to standard analyses allows for the

integration of non-parametric techniques into relevant design chapters, rather than in a single, isolated chapter. This organization allows for the comparison of the pros and cons of alternative procedures within the research context to which they apply. Basic concepts, such as sampling distributions, expected mean squares, design efficiency, and statistical models are emphasized throughout. This approach provides a stronger conceptual foundation in order to help the reader generalize the concepts to new situations they will encounter in their research and to better understand the advice of statistical consultants and the

content of articles using statistical methodology. The second edition features a greater emphasis on graphics, confidence intervals, measures of effect size, power analysis, tests of contrasts, elementary probability, correlation, and regression. A Free CD that contains

several real and artificial data sets used in the book in SPSS, SYSTAT, and ASCII formats, is included in the back of the book. An Instructor's Solutions Manual, containing the intermediate steps to all of the text exercises, is available free to adopters.
