Empirical Methods in  
 Natural Language  
 Generation Oxford

University Press, USA

This comprehensive three-volume set marks the publication of the proceedings of the Eighth International Congress of Egyptologists, held in Cairo in 2000, the largest Congress since the inaugural meeting in 1979. Organized thematically to reflect the breadth and depth of the

material presented at this event, these papers provide a survey of current Egyptological research at the dawn of the twenty-first century. The proceedings include the eight Millennium Debates led by esteemed Egyptologists, addressing key issues in the field, as well as nearly every paper presented at the Congress. The 275 papers cover the whole spectrum of Egyptological research. Grouped under the themes of archaeology, history, religion, language, conservation,

and museology, and written in English, French, and German, these contributions together form the most comprehensive picture of Egyptology today.

**Egyptology at the Dawn of the Twenty-first Century** American Univ in Cairo Press

Aquest volum, escrit per l'eclesiàstic Joan Binimelis (1538/9-1616), constitueix la primera edició crítica del Llibre V de la Història general del Regne de Mallorca en la versió catalana que, com és sabut, és l'original. Sens

dubte, aquesta part de l'obra, dedicada a la descripció geogràfica de Mallorca i de caràcter autònom respecte a la narració històrica i cronística, representa l'aportació més original de l'autor i la que manté més vigència i interès avui dia, tant per la modernitat del seu plantejament, com per la diversitat dels aspectes que són objecte de la seua metòdica atenció: situació geogràfica, afrontacions, proveïment d'aigua, cales i aptesa per a desembarcaments,

cabuda i possibilitats d'ancoratge, demografia, dades econòmiques - produccions agrícoles i ramaderes--, dades històriques, règim jurídic, institucions, monuments i d'altres informacions rellevants de les poblacions illenques. *Encyclopédie méthodique, ou, par ordre de matières* Oxford University Press Reprint of the original, first published in 1883. *Studia patristica* BRILL The first thorough commentary on the Old Greek and Peshitta of Isaiah Ronald L. Troxel's

new textual commentary on Isaiah focuses on the book's Greek and Syriac translations and seeks to recover, as much as possible, the Hebrew texts on which these early translations relied. Troxel treats the Greek and Syriac together in order to present a detailed analysis of their relationship, devoting particular attention to whether the Syriac was directly or indirectly influenced by the Greek. This comparison sheds light on both the shared and distinct approaches

that the translators took in rendering lexemes, phrases, verses, and even passages. In addition Troxel presents observations about the literary structures the translators created that differ from those implicit in their source texts (as we understand them), to produce coherent discourse in the target language. Features: Textual commentary on the life of the text of Isaiah 1-25 Use of the Dead Sea Scrolls to shed light on particular issues Detailed comparison of

the Masoretic Text, the Old Greek, and the Peshitta

**Pamphlets on French Philology (Old French) 1850-1900** BRILL

The revised third edition of the 'Oxford Classical Dictionary' is the ultimate reference on the classical world containing over 6,200 entries. The 2003 revision includes minor corrections and updates and all Latin and Greek words in the text are now translated into English. Collected works of Shlomo Pines BRILL

This collection, presented to Michael Friedrich in honour of his academic career at of the Centre for the Study of Manuscript Cultures, traces key concepts that scholars associated with the Centre have developed and refined for the systematic study of

manuscript cultures. At the same time, the contributions showcase the possibilities of expanding the traditional subject of 'manuscripts' to the larger perspective of 'written artefacts'.

**Dictionary** Walter de Gruyter

This book constitutes the refereed proceedings of the 14th International Conference on the Theory and Application of Cryptology and Information Security, ASIACRYPT 2008, held in Melbourne, Australia, in

December 2008. The 33 revised full papers presented together with the abstract of 1 invited lecture were carefully reviewed and selected from 208 submissions. The papers are organized in topical sections on multi-party computation, cryptographic protocols, cryptographic hash functions, public-key cryptography, lattice-based cryptography, private-key cryptography, and analysis of stream ciphers.

The Quarterly Review  
(London) Oxford University Press, USA

The Solar and Heliospheric Observatory (SOHO) is a joint ESA/NASA mission to study the Sun, from its deep core to the outer corona, and the solar wind. SOHO was launched on 2 December 1995 and was inserted into a halo orbit around the L1 Lagrangian point on 14 February 1996. From this vantage point it is continuously monitoring the Sun, the heliosphere, and the solar wind particles that stream toward the Earth. Nominal operations of the SOHO

mission started in April 1996 after commissioning of the spacecraft and the scientific payload. Detailed descriptions of the twelve instruments, which represent the most comprehensive set of solar and heliospheric instruments ever developed and placed on the same platform, can be found in *The SOHO Mission* (Solar Physics, Vol. 162, Nos. 1-2, 1995). This volume contains papers reporting the first scientific results from the SOHO mission as well as descriptions of the in-

flight performance of some of the instruments, published in two parts of a Solar Physics special (Part I in Solar Physics, Vol. 170, No. 1; Part II in Solar Physics, Vol. 175, No. 2). Unique data from the three helioseismology instruments (GOLF, VIRGO, MDI/SOI) provide new insights into the structure and dynamics of the solar interior, from the deep core to the outermost layers of the convection zone. The remote sensing instruments (SUMER, CDS, EIT, LASCO, UVCS, SWAN)

present exciting new data on a wide range of topics such as transition region dynamics, coronal plumes, coronal holes, streamers, and coronal mass ejections, giving us our first comprehensive view of the outer solar atmosphere and corona. These data are complemented by energetic particle measurements produced by the ERNE instrument on board SOHO. *Biographie Universelle, Ancienne Et Moderne* SBL Press  
A collection of scholarship

on Herodotus. Vol. 1 discusses his historical method, sources, narrative art, literary antecedents, intellectual background, and political ideology. Vol. 2 focuses on his description of foreign lands and peoples and the theoretical issues it raises, including the extent to which the ethnographic portrayals conform to a conventional Greek construct of barbarian 'otherness' or derive from direct contact with native sources. Textes grecs, démotiques et bilingues Courier

Corporation  
The present volume contains a collection of essays on the Book of Isaiah offered as a tribute to Arie van der Kooij on the occasion of his sixty-fifth birthday, which coincides with his retirement as Professor of Old Testament at Leiden University. The twenty-four contributions, written by leading scholars in the field of Old Testament studies, focus on the Book of Isaiah within the context of Hebrew and ancient near-eastern writings, particularly

those from the Neo-Assyrian period, as well as on the book's reception history, particularly in its Greek and Syriac translations. Together these studies offer a rich and original contribution to the study of the Book of Isaiah in its Hebrew, Aramaic, Assyrian, Greek, Syriac, and Dutch contexts.

**A theoretical and practical grammar of the French tongue ... Tenth edition, revised and corrected by Mr. Stone** Springer Nature  
Nearly every aspect of

daily life in the Mediterranean world and Europe during the florescence of the Greek and Roman cultures is relevant to the topics of engineering and technology. This volume highlights both the accomplishments of the ancient societies and the remaining research problems, and stimulates further progress in the history of ancient technology. The subject matter of the book is the technological framework of the Greek and Roman cultures from ca. 800 B.C.

through ca. A.D. 500 in the circum-Mediterranean world and Northern Europe. Each chapter discusses a technology or family of technologies from an analytical rather than descriptive point of view, providing a critical summation of our present knowledge of the Greek and Roman accomplishments in the technology concerned and the evolution of their technical capabilities over the chronological period. Each presentation reviews the issues and recent contributions, and defines

the capacities and accomplishments of the technology in the context of the society that used it, the available "technological shelf," and the resources consumed. These studies introduce and synthesize the results of excavation or specialized studies. The chapters are organized in sections progressing from sources (written and representational) to primary (e.g., mining, metallurgy, agriculture) and secondary (e.g., woodworking, glass production, food

preparation, textile production and leather-working) production, to technologies of social organization and interaction (e.g., roads, bridges, ships, harbors, warfare and fortification), and finally to studies of general social issues (e.g., writing, timekeeping, measurement, scientific instruments, attitudes toward technology and innovation) and the relevance of ethnographic methods to the study of classical technology. The unrivalled breadth and depth of this volume

make it the definitive reference work for students and academics across the spectrum of classical studies. *A Subject Index of the Modern Works Added to the Library of the British Museum in the Years 1880-[95]* Walter de Gruyter GmbH & Co KG Natural language generation (NLG) is a subfield of natural language processing (NLP) that is often characterized as the study of automatically converting non-linguistic representations (e.g.,

from databases or other knowledge sources) into coherent natural language text. In recent years the field has evolved substantially. Perhaps the most important new development is the current emphasis on data-oriented methods and empirical evaluation. Progress in related areas such as machine translation, dialogue system design and automatic text summarization and the resulting awareness of the importance of language generation, the increasing

availability of suitable corpora in recent years, and the organization of shared tasks for NLG, where different teams of researchers develop and evaluate their algorithms on a shared, held out data set have had a considerable impact on the field, and this book offers the first comprehensive overview of recent empirically oriented NLG research.

Universitat de València  
This volume is a collection of papers on emerging

concepts, significant insights, and novel approaches on information systems development (ISD). It examines and investigates up-and-coming trends in ISD in general, emphasizing benefits and risks of Artificial Intelligence in the development and operation of Information Systems. The book draws on invited papers selected from the proceedings of the 30th International Conference on Information Systems Development hosted by

Babeş-Bolyai University, Cluj-Napoca, Romania, August 31 - September 2, 2022 (ISD2022). The theme of ISD2022 was "Artificial Intelligence for Information Systems Development and Operations". The conference focused on the interplay between Information Systems and Artificial Intelligence, trying to emphasize novel, smarter automation approaches and the mitigation of risks related to AI adoption. Primary readership of the volume are researchers interested

in methodological and operational perspectives related to ISD in general, and to AI adoption as a means of digital transformation in particular.

This handbook provides a comprehensive and thorough survey of our current insights into the diversity and unity found across the 6000 languages of this planet. The 125 articles include

inter alia chapters on the patterns and limits of variation manifested by analogous structures, constructions and linguistic devices across languages (e.g. word order, tense and aspect, inflection, color terms and syllable structure). Other chapters cover the history, methodology and the theory of typology, as well as the relationship between language typology and other

disciplines. The authors of the individual sections and chapters are for the most part internationally known experts on the relevant topics. The vast majority of the articles are written in English, some in French or German. The handbook is not only intended for the expert in the fields of typology and language universals, but for all of those interested in linguistics. It is specifically addressed to all those who specialize in

individual languages, providing basic orientation for their analysis and placing each language within the space of what is possible and common in the languages of the world.
