 Stephen N. Haskell (1833–1922) was an evangelist, missionary and writer in the early days of the Seventh-Day Adventist Church. *Proust Among the Stars: How To Read Him; Why Read Him?* Thieme

 Although cerebral dominance, the specialization of each side of the brain for different functions, was discovered in the 1860s, almost nothing was known for many years about its biological foundations, the study of which has undergone what can only be described as a revolution in the past decade and a half. Norman Geschwind and Albert Galaburda, two of the leaders of this new field, have assembled a distinguished group of investigators, each a pioneer in some aspect of the biology of dominance. The authors document human brain asymmetry at gross and microscopic levels in both adults and fetuses, its visualization in life by radiological methods, and its manifestation in brain waves. The evolutionary history of brain asymmetry over more than 300,000 years is shown in fossil skulls of humans and apes. In a dramatic reversal of older beliefs, asymmetry of anatomy, function, and chemistry has been demonstrated in many nonhuman species, and experiments have shown the role of hormones and other prenatal influences in the production of asymmetry. The surprising associations of non-right-handedness with twinning and immune disorders are discussed, as well as the asymmetrical malformation of the cortex in childhood dyslexia. This volume, combining scholarly authority and the excitement of the birth of a new discipline, will be welcomed by those to whom the implications of dominance are becoming evident--neuroscientists, neurologists, linguists, psychologists, experts in learning disorders, speech pathologists--and by specialists in nearly every branch of biology, medicine, and psychology.

 Jean-Pierre Vernant's concise, brilliant essay on the origins of Greek thought relates the cultural achievement of the ancient Greeks to their physical and social environment and shows that

what they believed in was inseparable from the way they lived. The emergence of rational thought, Vernant claims, is closely linked to the advent of the open-air politics that characterized life in the Greek polis. Vernant points out that when the focus of Mycenaean society gave way to the agora, the change had profound social and cultural implications. "Social experience could become the object of pragmatic thought for the Greeks," he writes, "because in the city-state it lent itself to public debate. The decline of myth dates from the day the first sages brought human order under discussion and sought to define it.... Thus evolved a strictly political thought, separate from religion, with its own vocabulary, concepts, principles, and theoretical aims."

 Defining spirituality as 'the dynamic unity between the content of a faith and the way in which it is lived by historically determined human beings', Vauchez steps outside the clerical world usually studied to trace the religious mentality of the laity, the ordinary and often illiterate majority of Christians.

 Talismano is a novelistic exploration of writing seen as a hallucinatory journey through half-remembered, half-imagined cities—in particular, the city of Tunis, both as it is now, and as it once was. Walking and writing, journey and journal, mirror one another to produce a calligraphic, magical work: a palimpsest of various languages and cultures, highlighting Abdelwahab Meddeb's beguiling mastery of both the Western and Islamic traditions. Meddeb's journey is first and foremost a sensual one, almost decadent, where the narrator luxuriates in the Tunis of his memories and intercuts these impressions with recollections of other cities at other times, reviving the mythical figures of Arab-Islamic legend that have faded from memory in a rapidly westernizing North Africa. A fever dream situated on the knife-edge between competing cultures, *Talismano* is a testament to the power of language to evoke, and subdue, experience.

Paul Claudel's Five Great Odes constitutes one of the great twentieth-century achievements in lyric poetry. Equally earthy and prayerful, perennially and universally relevant in their ecological and sacramental vision, the Odes deserve to be celebrated alongside T. S. Eliot's Four Quartets and Rainer Maria Rilke's Duino Elegies.

"[A] graceful and brilliant novel . . . leads the reader on a journey through childhood autism that proves enlightening as well as fascinating." —ForeWord Magazine
Burton Rembrandt has the sort of perspective on life that is almost impossible for adults to understand: the perspective of an eight-year-old. And to Burt, his parents and teachers seem to be speaking a language he cannot understand. This is Burt's story as written in pencil on the walls of the Quiet Room in the Children's Trust Residence Center, where he lands after expressing his ardent feelings for a classmate. It begins: When I was five I killed myself . . . In this rediscovered modern classic from "one of France's best-loved contemporary writers," Howard Buten renders with astounding insight and wry

language the tale of a troubled—or perhaps just perfectly normal—young boy testing the boundaries of love and life (Time). "Buten uses his wit like a whip to get at the heart of this boy's own story . . . bringing some shock and some power to that delicate line between youth and the rest of the world." —The Austin Chronicle
"This psychologically intense tale moves quickly, and the difficult task of creating a child's voice with authenticity and depth proves Buten a gifted stylist and storyteller . . . [an] imaginative and provocative book." —Publishers Weekly, starred review
"Certainly Buten offers some insight into a troubled child's mind." —The New York Times Book Review
