Visual Heritage in the Digital Age Zed Books Ltd.

The second edition of this broadly based book continues to examine and update the basic and applied aspects of strength and power in sport from the neurophysiology of the basic motor unit to training for specific activities. Authorship is, again, international and includes leading physiologists and clinicians.

Gypsies and Travellers Basic Books

In his foreword, the president of the World Bank, James D. Wolfensohn, states plainly and precisely the rationale for this volume. "Evaluation is a central aspect of any poverty reduction endeavor. Evaluation

implies that we have adopted a methodology that allows us to look in an effective way at the results of what we are doing so that we can, in turn, adapt our future actions toward the effective achievement of our goals. Evaluation adds value if we can learn something useful from it. It is not just a scorecard. It is something that helps us change our behavior or influence the behavior of others." This high powered collection of papers illustrates this statement. The network of world class scholars and development practitioners covers the gamut from methodological issues to policy concerns with respect to participatory evaluation, poverty reducing growth, macro and micro levels of intervention, health, nutrition and population programs, social inclusion and the changing role of the civil society. The

participants include major figures, including a Nobel Laureate as well as cutting edge policy makers. Poverty reduction is examined in innovative ways-utilizing state of the art techniques of the social and economic sciences. The editors and contributors emphasize "what works" in poverty reduction programs. They point to making interventions context specific with a holistic vision of the problem. Contributors emphasize social funds and safety nets, social services, crisis prevention, informal social security and insurance systems, anti-corruption programs, mobilization of the poor, and ultimately, the creation, where none existed in the past, of a workable civil society. In short, this volume lies at the intersection of development economics and political economy. It seeks to promote development effectiveness through social

learning and problem solving. The volume is unabashedly focussed on pro-poor growth. It has its roots in a conference sponsored by the Operations Evaluation Department, an independent unit within the World Bank. The goals of evaluation are to learn from experience, to provide an objective basis for assessing the results of the Bank's work, and to provide accountability in the achievement of its objectives. Osvaldo N. Feinstein is a manager, and Robert Picciotto, director general of the Operations Evaluation Department. The World Bank is located in Washington, D.C. with offices throughout the developing world.

The New York Times-bestselling guide to how automation is changing the economy, undermining work, and reshaping our lives
Winner of Best Business Book of the Year awards from the Financial Times and from Forbes "Lucid, comprehensive, and unafraid...;an indispensable contribution to a long-running argument."--Los Angeles Times
What are the jobs of the future? How many will there be? And who will have them? As technology continues to accelerate and machines begin taking care of themselves, fewer people will be necessary. Artificial intelligence is already well on its way to making "good jobs" obsolete: many paralegals, journalists, office workers, and even computer programmers are poised to be replaced by robots and smart software. As progress continues, blue and white collar jobs alike will evaporate, squeezing working- and middle-class families ever further. At the same time, households are under assault from exploding costs, especially from the two major industries-education and health care-that, so far, have not been transformed by information technology. The result could well be massive unemployment and inequality as well as the implosion of the consumer economy itself. The past solutions to technological disruption, especially more training and education, aren't going to work. We must decide, now, whether the future will see broad-based prosperity or catastrophic levels of inequality and economic insecurity. Rise of the Robots is essential reading to understand what accelerating technology means for our economic prospects-not to mention those of our children-as well as for society as a whole.
The Social Reintegration of Offenders and Crime Prevention Policy Press

"Games are a unique art form. The game designer doesn't just create a world; they create who you will be in that world. They tell you what abilities to use and what

goals to take on. In other words, they specify a form of agency. Games work in the medium of agency. And to play them, we take on alternate agencies and submerge ourselves in them. What can we learn about our own rationality and agency, from thinking about games? We learn that we have a considerable degree of fluidity with our agency. First, we have the capacity for a peculiar sort of motivational inversion. For some of us, winning is not the point. We take on an interest in winning temporarily, so that we can play the game. Thus, we are capable of taking on temporary and disposable ends. We can submerge ourselves in alternate agencies, letting them dominate our consciousness, and then dropping them the moment the game is over. Games are, then, a way of recording forms of agency, of encoding them in artifacts. Our games are a library of agencies. And exploring that library can help us develop our own agency and autonomy. But this technology can also be used for art. Games can sculpt our practical activity, for the sake of the beauty of our own actions. Games are part of a crucial, but overlooked category of art - the process arts. These are the arts which evoke an activity, and then ask you to appreciate your own activity. And games are a special place where we can foster beautiful experiences of our own activity. Because our struggles, in games, can be designed to fit our capacities. Games can present a harmonious world, where our abilities fit the task, and where we pursue obvious goals and act under clear values. Games are a kind of existential balm against the difficult and exhausting value clarity of the world. But this presents a special danger. Games can be a fantasy of value clarity. And when that fantasy leaks out into the world, we can be tempted to oversimplify our enduring values. Then, the pleasures of games can seduce us away from our autonomy, and reduce our agency."--

Strengthening the Military Family Readiness System for a Changing American Society Springer Science & Business Media

Heritage is everywhere, and an understanding of our past is increasingly critical to the understanding of our contemporary cultural context and place in global society. *Visual Heritage in the Digital Age* presents the state-of-the-art in the application of digital technologies to heritage studies, with the chapters collectively demonstrating the ways in which current developments are liberating the study, conservation and management of the past. Digital approaches to heritage have developed significantly over recent

decades in terms of both the quantity and range of applications. However, rather than merely improving and enriching the ways in which we understand and engage with the past, this technology is enabling us to do this in entirely new ways. The chapters contained within this volume present a broad range of technologies for capturing data (such as high-definition laser scanning survey and geophysical survey), modelling (including GIS, data fusion, agent-based modelling), and engaging with heritage through novel digital interfaces (mobile technologies and the use of multi-touch interfaces in public spaces). The case studies presented include sites, landscapes and buildings from across Europe, North and Central America, and collections relating to the ancient civilisations of the Middle East and North Africa. The chronological span is immense, extending from the end of the last ice age through to the twentieth century. These case studies reveal new ways of approaching heritage using digital tools, whether from the perspective of interrogating historical textual data, or through the applications of complexity theory and the modelling of agents and behaviours. Beyond the data itself, *Visual Heritage in the Digital Age* also presents fresh ways of thinking about digital heritage. It explores more theoretical perspectives concerning the role of digital data and the challenges that are presented in terms of its management and preservation.

Now more than ever the issues of accommodation, education, health care, employment, and social exclusion for British Gypsy and Traveller communities need to be addressed. This book looks at Gypsies and Travellers in British society, touching on topics such as media and political representation, power, justice, and the impact of European initiatives for inclusion. In doing so, it offers important new insights for students, academics, policy makers, journalists, service providers, and others working with these groups.

Knowledge-driven actions: Transforming higher education for global sustainability
Council for British Archaeology
Legendary UCLA coach John Wooden once said, "People say Morgan Wootten is the best high school basketball coach in the country. I disagree. I know of no finer coach at any level—high school, college, or pro." Morgan Wootten has retired from coaching, but his knowledge of the game remains unsurpassed and keen as ever. *Coaching Basketball Successfully* contains

a wealth of Wootten's timeless wisdom. And, in this third edition, Wootten adds even more value—the coaching experiences, methods, and tactics of his son Joe, a successful high school coach himself. Loaded with insights, instruction, drills, and Xs and Os, *Coaching Basketball Successfully* is the best single resource on making the most of your program, team, and players each season.

Behavioral Addictions Kluwer Law International B.V.

Intelligent algorithms are already well on their way to making white collar jobs obsolete: travel agents, data-analysts, and paralegals are currently in the firing line. In the near future, doctors, taxi-drivers and ironically even computer programmers are poised to be replaced by 'robots'. Without a radical reassessment of our economic and political structures, we risk the very implosion of the capitalist economy itself. In *The Rise of the Robots*, technology expert Martin Ford systematically outlines the achievements of artificial intelligence and uses a wealth of economic data to illustrate the terrifying societal implications. From health and education to finance and technology, his warning is stark – all jobs that are on some level routine are likely to eventually be automated, resulting in the death of traditional careers and a hollowed-out middle class. The robots are coming and we have to decide – now – whether the future will bring prosperity or catastrophe. *Priced Out* Transaction Publishers

Egypt, and in particular the Cairo Regional Centre for International Commercial Arbitration (CRCICA), has clearly cemented its status as a preferred seat for arbitration cases in both the Middle East-North Africa (MENA) region and the African continent. To assist parties with a need or desire to arbitrate disputes arising in these regions – whether commercial or investment – this incomparable book, the first in-depth treatment in any language of arbitration practice under Egyptian law, provides a comprehensive overview of the arbitration process and all matters pertaining to it in Egypt, starting with the arbitration agreement and ending with the recognition and enforcement of the arbitral award. Citing more than 2,500 cases – both awards and arbitral-related court judgments – the book's various chapters examine in detail how Egypt's arbitration law, based on the UNCITRAL model law, encompasses such internationally accepted arbitral provisions and aspects as the following: application of the New York Convention; concept of arbitrability; choice of applicable law; formation of the arbitral tribunal;

selection, rights, duties, liability, and challenge of arbitrators; arbitral procedures; evidence and experts and burden of proof; form and content of arbitral awards; annulment and enforcement procedures; interaction between Sharia law and arbitration; role of Egypt's Technical Office for Arbitration (TOA); and judicial fees. Special issues such as third-party funding and public policy as well as particular areas of dispute such as construction, sports, real estate, labor and employment, tax, competition, intellectual property, and technology transfer are all covered. The author offers practical guidelines tailored to arbitration in these specific areas of law. An added feature is the many figures and other visuals that accompany the text. For whoever is planning to or is currently practicing arbitration in the Middle East, this matchless book gives arbitrators, in-house counsel and arbitration practitioners everything that is needed to answer any question likely to arise. This book should be on the shelf of every practitioner and academic wishing to comprehend arbitration in Egypt as construed by the Egyptian Courts. Review/Testimonial: "The book is an excellent contribution to understand and assess Egyptian international arbitration law and practice and invaluable guide for lawyers, arbitrators and academics working on arbitration cases connected to Egypt for three main reasons: First, a case law perspective that adds considerable value to the book. The author examines not only the text of laws but also the case law. On every issue, Mr Shehata quotes the positions of Egyptian courts, especially those of the Egyptian Cassation Court. With more than 2,500 cases cited, the book is a precious source to discover the Egyptian decisions originally only in Arabic. Through an analysis and commentary of a great number of decisions rendered by various levels of Egyptian courts, the book offers the most reliable source with regard to the interpretation and the application of the Law No. 27 of 1994 and the international conventions by Egyptian courts. Second, a complete and far-reaching analysis. The book covers all aspects of the arbitration process from the arbitration agreement to the enforcement of arbitral awards. It includes the specific arbitration sectors such as sport arbitration, construction arbitration and investment arbitration. This coverage makes the book one of the reference work on the whole regime of arbitration in Egypt. Third, an up-to-date study, which takes into account rule changes and up-to-date developments on

new trends, such as third-party funding, optional clauses, virtual hearings, the use of tribunal secretaries and issues of ethics in arbitration." Source / Reviewer: Professor Walid Ben Hamida, University of Paris-Saclay, France. ICC DISPUTE RESOLUTION BULLETIN 2021 | ISSUE 3 | **International Investment Protection of Global Banking and Finance** Kluwer Law International B.V.

Vanessa Finch provides an interesting look at corporate insolvency laws and processes. She adopts an interdisciplinary approach to place two questions at the centre of her discussion. Are current UK laws and procedures efficient, expert, accountable and fair? Are fundamentally different conceptions of insolvency law needed for it to develop in a way that serves corporate and broader social ends? Topics considered in this wide-ranging book include different ways of financing companies, causes of corporate failure and prospects for designing rescue-friendly processes. Also examined are alternative asset distribution of failed companies, allocations of insolvency risks and effects of insolvency on a company's directors and employees. Finch argues that changes of approach are needed if insolvency law is to develop with coherence and purpose. This book will appeal to academics and students at advanced undergraduate and graduate level, and to legal practitioners throughout the common law world.

Europe's Lost World Springer Nature

The chief investment officers (CIOs) at endowments, foundations, family offices, pension funds, and sovereign wealth funds are the leaders in the world of finance. They marshal trillions of dollars on behalf of their institutions and influence how capital flows throughout the world. But these elite investors live outside of the public eye. Across the entire investment industry, few participants understand how these holders of the keys to the kingdom allocate their time and their capital. What's more, there is no formal training for how to do their work. So how do these influential leaders practice their craft? What skills do they require? What frameworks do they employ? How do they make investment decisions on everything from hiring managers to portfolio construction? For the first time, *CAPITAL ALLOCATORS* lifts the lid on this opaque corner of the investment landscape. Drawing on interviews from the first 150 episodes of the *Capital Allocators* podcast, Ted Seides presents the best of the knowledge, practical insights, and advice of the world's top professional investors. These insights include: - The best practices for interviewing, decision-

making, negotiations, leadership, and management. - Investment frameworks across governance, strategy, process, technological innovation, and uncertainty. - The wisest and most impactful quotes from guests on the Capital Allocators podcast. Learn from the likes of the CIOs at the endowments of Princeton and Notre Dame, family offices of Michael Bloomberg and George Soros, pension funds from the State of Florida, CalSTRS, and Canadian CDPQ, sovereign wealth funds of New Zealand and Australia, and many more. CAPITAL ALLOCATORS is the essential new reference manual for current and aspiring CIOs, the money managers that work with them, and everyone allocating a pool of capital.

Third-Party Funding in International Arbitration Harriman House Limited

The Rise of Cotton Mills in the South, a classical book, has been considered essential throughout the human history, and so that this work is never forgotten we at Alpha Editions have made efforts in its preservation by republishing this book in a modern format for present and future generations. This whole book has been reformatted, retyped and designed. These books are not made of scanned copies of their original work and hence the text is clear and readable.

Capital Allocators Simon and Schuster
In the Republic of Ireland, there have been many developments in the law affecting trusts, such as the decision of the Supreme Court in Lynch v Burke on resulting trusts and in England the decision of the House of Lords in Stack v Dowden on "common intention," constructive trusts. These and similar developments are comprehensively considered and explained in this second edition. The book is fully updated to include all relevant case law and legislation.

Omnia Sunt Communia Routledge

Since the first edition of this invaluable book in 2012, third-party funding has become more mainstream in international arbitration practice. However, since even the existence of a third-party funding agreement in a dispute is often kept secret, it can be difficult to glean the specifics of successful funding agreements. This welcome book, now updated, expertly reveals the nuances of third-party funding in international arbitration, examines the phenomenon in key jurisdictions, and provides a reliable resource for users and potential users that may wish to tap into and make use of this distinctive funding tool. Focusing on Australia, the United Kingdom, the United States, Germany, the Netherlands,

Canada, and South Africa, the authors analyze and assess the legal regime based upon legislation, judicial opinions, ethics opinions, and practitioner anecdotes describing the state of third-party funding in each jurisdiction. In addition to updating summaries of the law of the various jurisdictions, the second edition includes a new chapter addressing third-party funding in investor-state arbitration. Among the issues raised and examined are the following: · payment of adverse costs; · "Before-the-Event" (BTE) and "After-the-Event" (ATE) insurance; · attorney financing: pro bono representation, contingency representation, conditional fee arrangements; · loans; · ethical doctrines affecting the third-party funding industry; · possible future bundling, securitization, and trading of legal claims; · risk that the funder may put its own interests ahead of the client's interests; and · whether the existence of a funding agreement must or should be disclosed to the decision maker. The second edition also includes discussion of recent institutional developments as they relate to third-party funding, including the work of the ICCA-Queen Mary Task Force on Third-Party Funding and how third-party funding is being incorporated into arbitral rules and investment treaties. Aply providing a thorough understanding of what third-party funding entails and what legal parameters exist, this book will be of compelling interest to parties aiming to take advantage of the high values, speed, reduced evidentiary costs, outcome predictability, industry expertise, and high award enforceability characteristic of the third-party funding arrangements available in international arbitration.

Investing in the Health and Well-Being of Young Adults Yale University Press

The main aim of this book is to evaluate the concept of stress and provide tools for physicians to identify patients who might benefit from stress management. This will incorporate a detailed description of the physiological and pathophysiological consequences of acute and chronic stress that might lead to cardiovascular disease. The book will aim to critically evaluate interventional research (behavioural and other therapies) and provide evidence based recommendations on how to manage stress in the cardiovascular patient. Our intentions are to define and highlight stress as an etiological factor for cardiovascular disease, and to describe an evidence based "tool box" that physicians may use to identify and manage patients in whom stress may be an important contributing factor for their disease and

their risk of suffering cardiovascular complications.

Arbitration in Egypt Springer Science & Business Media

Leading Cities is a global review of the state of city leadership and urban governance today. Drawing on research into 202 cities in 100 countries, the book provides a broad, international evidence base grounded in the experiences of all types of cities. It offers a scholarly but also practical assessment of how cities are led, what challenges their leaders face, and the ways in which this leadership is increasingly connected to global affairs. Arguing that effective leadership is not just something created by an individual, Elizabeth Rapoport, Michele Acuto and Leonora Grcheva focus on three elements of city leadership: leaders, the structures and institutions that underpin them, and the tools used to drive change. Each of these elements are examined in turn, as are the major urban policy issues that leaders confront today on the ground. The book also takes a deep dive into one particular example of tool or instrument of city leadership – the strategic urban plan. Leading Cities provides a much-needed overview and introduction to the theory and practice of city leadership, and a starting point for future research on, and evaluation of, city leadership and its practice around the world.

Queenship and Political Power in Medieval and Early Modern Spain UCL Press

This book presents a comprehensive overview and analysis of mangrove ecological processes, structure, and function at the local, biogeographic, and global scales and how these properties interact to provide key ecosystem services to society. The analysis is based on an international collaborative effort that focuses on regions and countries holding the largest mangrove resources and encompasses the major biogeographic and socio-economic settings of mangrove distribution. Given the economic and ecological importance of mangrove wetlands at the global scale, the chapters aim to integrate ecological and socio-economic perspectives on mangrove function and management using a system-level hierarchical analysis framework. The book explores the nexus between mangrove ecology and the capacity for ecosystem services, with an emphasis on thresholds, multiple stressors, and local conditions that determine this capacity. The interdisciplinary approach and illustrative study cases included in the book will provide valuable resources in data, information, and knowledge about the current status of one of the most

productive coastal ecosystem in the world.

Guide to Bank Underwriting, Dealing and Brokerage Activities Oxford University Press, USA

Unlike empresses in Germany and queens in England and France, the lives and political careers of most Iberian queens remain largely unknown to non-specialists. In this collection, Theresa Earenfight brings together new research on medieval and early modern Spanish queens that highlights the distinctive political culture that resulted in forms of queenship similar to, yet also substantially different from, that of northern Europe. The essays consider three aspects of queenship and politics: the institutional foundations and practice of politics, the politics of religion and religious devotion, and the literary and artistic representations of queenship and power. Late medieval queens, because they often occupied prominent and powerful offices such as the regency in Castile and Portugal and the Lieutenancy in the Crown of Aragon, exemplify a unique form of queenship that can best be described as a political partnership. Habsburg queens and empresses, often excluded from such official political roles, were less publicly

visible but their power as partner to the king, although shrouded, remains potent. Their political careers were the result of two forces: first, military circumstances brought about by territorial expansion, conquest, and second, a political culture that did not explicitly prohibit queens from active participation in the governance of the realm. The essays in this collection-by both newer and well established scholars-demonstrate the range and depth of current research on Iberian queenship, and prompt a re-examination of long-held assumptions about women and the exercise of power in pre-modern Spain.

Builder John Wiley & Sons

Uwe Reinhardt was a towering figure and moral conscience of health care policy in the United States and beyond. Famously bipartisan, he advised presidents and Congress on health reform and originated central features of the Affordable Care Act. In *Priced Out*, Reinhardt offers an engaging and enlightening account of today's U.S. health care system, explaining why it costs so much more and delivers so much less than the systems of every other advanced country, why this situation is morally indefensible, and how

we might improve it.

[U.S. Regulation of the International Securities and Derivatives Markets](#) Kluwer Law International B.V.

This excellent book, which deserves a wide readership, reports on the work of the North Sea Palaeolandscapes Project, which has been researching the fascinating lost landscape of Doggerland which until the end of the last Ice Age connected Britain to the continent in the North Sea area. It aims to make the findings available to a general readership, and show just how impressive they have been, with nearly 23,000km² mapped. The techniques used to reconstruct the landscape are explained, and conclusions and speculation about the climate and vegetation of the area in the Mesolithic offered. It also tells the story of the rediscovery of Doggerland, and the Mesolithic landscape more generally, from the pioneering work of Clement Reid in the nineteenth century, to the research of Grahame Clark and Bryony Coles in the twentieth. It's also worth pointing out just how well produced and illustrated the book is, and one can only hope that it can spark public interest in a comparatively little known phase of our prehistory.
