Foundations on Expansive Soils provides the practicing engineer with a summary of the state-of-the-art of expansive soils and practical solutions based on the author's experience. The book is organized into two parts. Part I deals with theory and practice, and summarizes some of the theoretical physical properties of expansive soils. It also discusses various techniques employed to found structures on expansive soils such as drilled pier foundation, mat foundation, moisture control, soil replacement, and chemical stabilization. Topics covered include the origin, mineralogical composition, and the basic structure of expansive soils; the migration of water, swelling potential, and swelling pressure; site investigations and laboratory testing; moisture control; and soil stabilization. Part II presents case studies on the following: distress caused by pier uplift; distress caused by the improper design and construction of a drilled pier foundation system; distress caused by heaving of footing pad and floor slab; distress caused by heaving of continuous

footings; and distress caused by a rise of ground water.

Buku teknologi berasan berbasis pangan lokal sangat penting untuk dibaca dalam rangka pengembangan pangan lokal berbentuk butiran granula menyerupai butiran bentuk beras dari padi. Kemudahan teknologi untuk dapat diterapkan di lapangan menjadi poin penting tersendiri supaya dapat lebih mudah tersebar di masyarakat. Tingkat konsumsi masyarakat akan produk beras dari padi di Indonesia masih sangat tinggi. Ketergantungan tersebut dapat diturunkan dengan berbekal optimasi pemanfaatan potensi sumber daya lokal di setiap kawasan tersebut. Melalui konsep pengembangan produk berbentuk beras merupakan peluang untuk mengoptimalkan sumber daya lokal, sambil menurunkan tingkat ketergantungan akan produk beras dari padi. Konsep pengembangan serealialia yang sudah berbentuk butiran serealialia hanya membutuhkan keseragaman bentuk dan ukuran untuk menghasilkan kualitas produk yang baik. Sedangkan peluang untuk pengembangan produk aneka umbi dapat melalui pengembangan teknologi granulasi. Kualitas dan jaminan kuantitas tidak luput dari konsep pengembangan teknologi di lapangan. Kualitas produk dapat dilakukan melalui jaminan mutu sumber bahan baku dan teknologi pencampuran terkait dengan optimasi nilai gizi serta sifat fungsional yang diinginkan. Pada buku diulas karakteristik sumber bahan baku, teknologi proses, metode pembentukan granula, karakterisasi beras analog, metode pemasakan dan jaminan kualitas produk yang dihasilkan

"We have come a long way from Evans-Pritchard's famous dictum that "there is only one method in social anthropology, the comparative method - and that is impossible." Yet a good 40 years later, qualitative social inquiry still has an uneasy relationship with comparison. This volume sets out "thick comparison" as a means to revive "comparing" as a productive process in ethnographic work: a process that helps to revitalise the articulation work inherent in analytical ethnographies; to vary observer perspectives and point towards "blind spots;" to name and create "new things" and modes of empirical work and to give way to intensified dialogues between data analysis and theorizing. Contributors are Katrin Amelang, Stefan Beck, Kati Hannken-Illjes, Alexander Kozin, Henriette Langstrup, Jørg Niewèhner, Thomas Scheffer, Robert Schmidt, Estrid Sørensen, and Britt Ross Winthereik."--Publisher's website.

Food antioxidants are of primary importance for the preservation of food quality during processing and storage. However, the status of food depends on a balance of antioxidants and prooxidants occurring in food. Food Oxidants and Antioxidants: Chemical, Biological, and Functional Properties provides a single-volume reference on the effects of naturally occurring and process-generated prooxidants and antioxidants on various aspects of food quality. The book begins with a general introduction to oxidation in food and then characterizes the main oxidants present in food, including enzymatic oxidants. Chapters cover oxidation potential, mechanisms of oxidation of the main food components (proteins and lipids), addition of exogenous oxidants during food processing, and the effects of physical agents such as irradiation, freeze-thawing, and high hydrostatic pressure during processing. The book also discusses the effects of oxidation on sensory characteristics of food components and analyzes how oxidation and antioxidants affect the nutritive and health-promoting features of food components. The text examines natural antioxidants in food, including lesser-known ones such as amino acids and polysaccharides, antioxidants generated in food as a result of processing, mechanisms of antioxidant activity, and measurement of antioxidant activity of food components. It explores the bioavailability of curcuminoid and carotenoids antioxidants and presents case studies on natural food antioxidants, presenting novel extraction methods for preservation of antioxidant activity. The final chapters address functional antioxidant foods and beverages as well as general ideas on the effects of food on the redox homeostasis of the organism.

As an area of high topical interest, Biopolymers - New materials for Sustainable Films and Coatings covers the development and utilization of polymers derived from bioresources, with a particular focus on film and coating applications. With growing concern for the environment and the rising price of crude oil, there is increasing demand for non-petroleum-based polymers from renewable resources. Leading research groups worldwide in industry and academe are working on such technology with the objective of applying the latest advances in the field. Written by well-respected experts, this text systematically covers the extraction and production of selected biopolymers as well as their properties and application as films or coatings in a variety of uses. The areas addressed include food packaging, edible coatings, paper coatings and agricultural films. Intended for researchers and students, this book will also be of interest to industry, especially in terms of the practical applications.

The Art of Scientific Computing BRILL

Nearly a decade ago I began planning this book with the goal of summarizing the existing body of knowledge on ecology of freshwater fishes in a way similar to that of H. B. N. Hynes' comprehensive treatise Ecology of Running Waters for streams. The time seemed appropriate, as there had been several recent volumes that synthesized much information on a range of topics important in fish ecology, from biogeographic to local scales. For example, the "Fish Atlas" (Lee et al. , 1980) had provided range maps and basic entry to the original literature for all freshwater fishes in North America, and in 1986 Hocutt and Wiley's Zoogeography of North American Fishes provided a detailed synthesis of virtually everything known about distributional ecology of fishes on that continent. Tim Berra (1981) had summarized in convenient map form the worldwide distribution of all freshwater fish families, and Joe Nelson's 1976 and 1984 editions of Fishes of the World had appeared. To complement these "big picture" views of fish distributions, the volume on Community and Evolutionary Ecology of North American Freshwater Fishes, edited by David Heins and myself (Matthews and Heins, 1987), had provided an opportunity for more than 30 individuals or groups to summarize their work on stream fishes (albeit mostly for warmwater systems).
