"The Conservative Collection" reinforces fundamental holdings of the Right. A strong, free, and thriving America requires us to value our founding principles and apply them in a modern world. Yet constant assaults on the very philosophies that birthed American exceptionalism jeopardize our sustained superiority. It, therefore, falls upon Conservatives to reenergize, inform, and strengthen the citizenry with the truths and successes stemming from conservatism. We need a strong America, one which will continue to be the home of liberty and prosperity. Discussed within "The Conservative Collection" are eleven areas of conservative concern: Conservative History, Individual Liberty, The Legislature, The Executive, The Judiciary, Economic Strength, Educational Strength, Military Strength, Personal Responsibility, International Leadership, and Moving America Forward. In our unique nation of states, built upon the pillars of liberty and opportunity, we are responsible for protecting the blessings of freedom and ensuring our future welfare; "The Conservative Collection" looks to aid

others in achieving those most-noble duties. A series of short essays complete this work, divided between the book's eleven sections. Not only does "The Conservative Collection" focus significant attention toward government and politics but also on character development and individual maturity. All Americans (Conservative or otherwise) must be leaders in a turbulent world-something not accomplished without purpose and principle.

Developed for the liberal arts math course by a seasoned author team, *Mathematical Excursions*, is uniquely designed to help students see math at work in the contemporary world. Using the proven Aufmann Interactive Method, students learn to master problem-solving in meaningful contexts. In addition, multi-part Excursion exercises emphasize collaborative learning. The text's extensive topical coverage offers instructors flexibility in designing a course that meets their students' needs and curriculum requirements. The Excursions activity and corresponding Excursion Exercises, denoted by an icon, conclude each section, providing opportunities for in-class cooperative work, hands-on learning, and development of critical-thinking skills.

These activities are also ideal for projects or extra credit assignments.

The Excursions are designed to reinforce the material that has just been covered in the section in a fun and engaging manner that will enhance a student's journey and discovery of mathematics. The proven Aufmann Interactive Method ensures that students try concepts and manipulate real-life data as they progress through the material. Every objective contains at least one set of matched-pair examples. The method begins with a worked-out example with a solution in numerical and verbal formats to address different learning styles. The matched problem, called Check Your Progress, is left for the student to try. Each problem includes a reference to a fully worked out solution in an appendix to which the student can refer for immediate feedback, concept reinforcement, identification of problem areas, and prevention of frustration. Eduspace, powered by Blackboard, for the Aufmann/Lockwood/Nation/Clegg Math Excursions course features algorithmic exercises and test bank content in question pools.

**Elementary Linear Algebra, 8e, International Metric Edition** Pearson Education India

This book is based on selected topics that the authors taught in math circles for elementary school students at the University of California, Berkeley; Stanford University; Dominican University (Marin County, CA); and the University of Oregon (Eugene). It is intended for people who are already running a math circle or who are thinking about organizing one. It can be used by parents to help their motivated, math-loving kids or by elementary school

teachers. We also hope that bright fourth or fifth graders will be able to read this book on their own. The main features of this book are the logical sequence of the problems, the description of class reactions, and the hints given to kids when they get stuck. This book tries to keep the balance between two goals: inspire readers to invent their own original approaches while being detailed enough to work as a fallback in case the teacher needs to prepare a lesson on short notice. It introduces kids to combinatorics, Fibonacci numbers, Pascal's triangle, and the notion of area, among other things. The authors chose topics with deep mathematical context. These topics are just as engaging and entertaining to children as typical "recreational math" problems, but they can be developed deeper and to more advanced levels. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession.

The series is divergent; therefore we may be able to do something with it. Eric T. Bell O. Heaviside Mathematics is a tool for thought. A highly necessary tool in a world where both feedback and non linearities abound. Similarly, all kinds of parts of mathematics serve as tools for other parts and for other sciences. Applying a simple rewriting rule to the quote on the right above one finds such statements as: 'One service topology has rendered mathematical physics .. .'; 'One service logic has rendered com puter science .. .';

'One service category theory has rendered mathematics .. .'. All arguably true. And all statements obtainable this way form part of the raison d' etre of this series.
