The study of 1st century CE Galilee has become an important subfield within the broader disciplines of Ancient Judaism and Early Christianity. In *Mapping Galilee*, John M. Vonder Bruegge examines how Galilee

is portrayed, both in ancient writings and current scholarship, as a variously mapped space using insights from critical geography as an evaluative lens. Conventional approaches to Galilee treat it as a static backdrop for a deliberate and dynamic historical drama. By reasserting geography as a creative process rather than a passive description, Vonder Bruegge also reasserts ancient Galilee as an interpreted space—a series of conceptualized "maps"—laden with meaning, significance, and purpose for

each individual author.

The need for a better understanding of the role location plays in economic life was first and most famously made explicit by Bertil Ohlin in 1933. However it is only recently, with the development of computer packages able to handle complex systems, as well as advances in economic theory (in particular an increased understanding of returns to scale and imperfect competition), that

Ohlin's vision has been met and a framework developed which explains the distribution of economic activity across space. This book is an integrated, non-mathematical, first-principles textbook presenting geographical economics to advanced students. Never avoiding advanced concepts, its emphasis is on examples, diagrams, and empirical evidence, making it the ideal starting point prior to monographic and journal material. Contains copious computer simulation exercises, available in book and electronic format to encourage learning and understanding through application. Uses case study material from North America, Europe, Africa and Australasia.

This book offers the latest research and new perspectives on Interactive Collaborative Learning and Engineering Pedagogy. We are currently witnessing a significant transformation in education, and in order to face today's real-world challenges, higher education has to find innovative ways to quickly respond to these new needs. Addressing these aspects was the chief aim of the 21st International Conference on Interactive Collaborative Learning (ICL2018), which was held on Kos Island, Greece from September 25 to 28, 2018. Since being founded in 1998, the conference has been devoted to new approaches in learning, with a special focus on collaborative learning. Today the ICL conferences offer a forum for exchanging information on relevant trends and research results, as well as sharing practical experiences in learning and engineering pedagogy. This book includes papers in the fields of: \* New Learning Models and Applications \* Pilot Projects: Applications \* Project-based Learning \* Real-world Experiences \* Remote and Virtual Laboratories \* Research in Engineering Pedagogy \* Technical Teacher Training It will benefit a

broad readership, including policymakers, educators, researchers in pedagogy and learning theory, school teachers, the learning industry, further education lecturers, etc.

Through out the current period of educational change, Geography education has also changed. The innovations may be the starting point to affect conceptual change and paradigm shifts. Geography education assimilates and integrates knowledge, skills and scientific methodologies. The ten articles in this book illuminate a wide range of topics of interest to Geography education. In their article, Skarstein and Wolff discuss how the interplay between the environment, society and economy pillars of sustainability thinking play out on scales of time, space and multitude and how geography teachers can support the students' understanding of sustainability. Yli-Panula et al. analysed used teaching and learning methods to find out good ones for promoting sustainability in geography. The same idea can be found in

Duffin's and Perry's article on Place-Based Ecology Education. In their article, Dür and Keller discuss the topics of quality of life, sustainability and global justice based on the goals of Education for Sustainable Development. Evaluation is an important part of learning. It is reviewed by Schauss and Sprenger regarding climate change education. The following two articles deal with students' views of landscapes worth conserving. In both studies, students expressed concern about the state of the environment. Yli-Panula et al. found that the Mexican students seldom considered their own activities in relation to the environment while Yli-Panula et al. stated that only some of the Finnish and Swedish students act as observers while others actively care for their environment. The remaining three articles deal with teaching methods and models. Benninghaus et al. present a benchmark method, which allows statements about the quality of the maps/diagrams in general. Álvarez-Otero and De Lázaro y Torres, on the other hand, describe their Technological Pedagogical Content Knowledge model. Koprina and Saari discusses student assignments reflecting on the documentary film

through critical pedagogy and ecopedagogy.

Edexcel AS Geography Student Unit Guide: Unit 1 New Edition Global Challenges

National Academies Press

The first fifteen years of the 21st century have thrown into sharp relief the challenges of growth, equity, stability, and sustainability facing the world economy. In addition, they have exposed the inadequacies of mainstream economics in providing answers to these challenges. This volume gathers over 50 leading scholars from around the world to offer a forward-looking perspective of economic geography to understanding the various building blocks, relationships, and trajectories in the world economy. The perspective is at the same time grounded in theory and in the experiences of particular places. Reviewing state-of-the-art of economic geography, setting agendas, and with illustrations and empirical evidence from all over the world, the book should be an essential reference for students, researchers, as well as strategists and policy makers. Building on

the success of the first edition, this volume offers a radically revised, updated, and broader approach to economic geography. With the backdrop of the global financial crisis, finance is investigated in chapters on financial stability, financial innovation, global financial networks, the global map of savings and investments, and financialization. Environmental challenges are addressed in chapters on resource economies, vulnerability of regions to climate change, carbon markets, and energy transitions. Distribution and consumption feature alongside more established topics on the firm, innovation, and work. The handbook also captures the theoretical and conceptual innovations of the last fifteen years, including evolutionary economic geography and the global production networks approach. Addressing the dangers of inequality, instability, and environmental crisis head-on, the volume concludes with strategies for growth and new ways of envisioning the spatiality of economy for the future.
