"In the midst of unprecedented attention to gender based violence (GBV) globally, prompted in part by the #MeToo movement, this book provides a new analysis of how higher education cultures can be transformed. It offers reflections from faculty, staff and students about how change has happened and could happen on their campuses in ways that go beyond implementation of programmes and policies. Building on what is already known from decades of scholarship and practice in the US, and more recent attention elsewhere, this book provides an

inter-disciplinary, international overview of attempts to transform higher education cultures in order to eradicate GBV.. Change happens because people act, usually with others. At the heart of transformative efforts lie collaborations between faculty, staff, students, activists and community organisations. The contributors to the book reflect on what makes for constructive, effective collaborations and how to avoid the common mistakes in working with others to end GBV. They consider what has worked to challenge the reluctance-or outright hostility-they have encountered in their work against GBV and how their collaborations have succeeded in transforming the ways we think about GV and what we do about it.Chapters focus on experiences in Canada, the US, England, Scotland, France and India to examine different approaches to tackling GBV in higher

education. They reveal the cultural variations in which GBV occurs as well as the similarities across cultures—that GBV is committed overwhelmingly by men against women and reflects a determination to assert masculine power. Together, they demonstrate that, to make higher education a safe environment for all, nothing short of a transformation is required"—

The New York Times bestselling account of one of history's most brutal—and forgotten—massacres, when the Japanese army destroyed China's capital city on the eve of World War II, "piecing together the abundant eyewitness reports into an undeniable tapestry of horror". (Adam Hochschild, Salon) In December 1937, one of the most horrific atrocities in the long annals of wartime barbarity occurred. The Japanese army swept into the ancient city of Nanking (what was then the capital of China), and within weeks, more than 300,000 Chinese civilians and soldiers were systematically raped, tortured, and murdered. In this seminal work, Iris Chang, whose own grandparents barely escaped the massacre, tells this history from three perspectives: that of the Japanese soldiers, that of the Chinese, and that of a group of Westerners who refused to abandon the city and created a safety zone, which saved almost 300,000 Chinese. Drawing on extensive interviews with survivors and documents brought to light for the first time, Iris Chang's classic book is the definitive history of this horrifying episode.

Many teens today who use the Internet are actively involved in participatory cultures—joining online communities (Facebook, message boards, game clans), producing creative work in new

forms (digital sampling, modding, fan videomaking, fan fiction), working in teams to complete tasks and develop new knowledge (as in Wikipedia), and shaping the flow of media (as in blogging or podcasting). A growing body of scholarship suggests potential benefits of these activities, including opportunities for peer-to-peer learning, development of skills useful in the modern workplace, and a more empowered conception of citizenship. Some argue that young people pick up these key skills and competencies on their own by interacting with popular culture; but the problems of unequal access, lack of media transparency, and the breakdown of traditional forms of socialization and professional training suggest a role for policy and pedagogical intervention. This report aims to shift the conversation about the "digital divide" from questions about access to technology to questions about access to opportunities for involvement in participatory culture and how to provide all young people with the chance to develop the cultural competencies and social skills needed. Fostering these skills, the authors argue, requires a systemic approach to media education; schools, afterschool programs, and parents all have distinctive roles to play. The John D. and Catherine T. Every year, about 30,000 people die by suicide in the U.S., and some 650,000 receive emergency treatment after a suicide attempt. Often, those most at risk are the least able to access professional help. Reducing Suicide provides a blueprint for addressing this tragic and costly problem: how we can build an

appropriate infrastructure, conduct needed research, and improve our ability to recognize suicide risk and effectively intervene. Rich in data, the book also strikes an intensely personal chord, featuring compelling quotes about people's experience with suicide. The book explores the factors that raise a person's risk of suicide: psychological and biological factors including substance abuse, the link between childhood trauma and later suicide, and the impact of family life, economic status, religion, and other social and cultural conditions. The authors review the effectiveness of existing interventions, including mental health practitioners' ability to assess suicide risk among patients. They present lessons learned from the Air Force suicide prevention program and other prevention initiatives. And they identify barriers to effective research and treatment. This new volume will be of special interest to policy makers, administrators, researchers, practitioners, and journalists working in the field of mental health.

The uproar over "legitimate rape" during the 2012 U.S. elections confirms that rape remains a word in flux, subject to political power and social privilege. *Redefining Rape* describes the forces that have shaped the meaning of sexual violence in the U.S., through the experiences of accusers, assailants, and advocates

for change.

The Millennium Dome, Braveheart and Rolls Royce cars. How do cultural icons reproduce and transform a sense of national identity? How does national identity vary across time and space, how is it contested, and what has been the impact of globalization upon national identity and culture? This book examines how national identity is represented, performed, spatialized and materialized through popular culture and in everyday life. National identity is revealed to be inherent in the things we often take for granted - from landscapes and eating habits, to tourism, cinema and music. Our specific experience of car ownership and motoring can enhance a sense of belonging, whilst Hollywood blockbusters and national exhibitions provide contexts for the ongoing, and often contested, process of national identity formation. These and a wealth of other cultural forms and practices are explored, with examples drawn from Scotland, the UK as a whole, India and Mauritius. This book addresses the considerable neglect of popular cultures in recent studies of nationalism and contributes to debates on the relationship between 'high' and 'low' culture.

Narrating Rape presents exciting new scholarship on how to read, wrestle with, and respond to sexual violence and rape in and around biblical texts. The fourteen essays represent global contributors and bring together respected senior scholars along with fresh emerging voices. Contributors take on sexual violence in the Hebrew Bible and the New Testament, as well as the ancient Near Eastern and Roman contexts that informed the production of these texts. There is also a significant focus on using contemporary literature, film, and popular culture (including reality television and music) to read and interpret biblical rape stories. Contributors include: Alexiana Fry, Meredith Warren, Kirsi Cobb, David Tombs, Jeremy Punt, and Gerald West

In this book Jeffrey Alexander develops the view that cultural sociology and “cultural pragmatics” are vital for understanding the structural turbulence and political possibilities of contemporary social life. Central to Alexander’s approach is a new model of social performance that combines elements from both the theatrical avant-garde and modern social theory. He uses this model to shed new light on a wide range of social actors, movements, and events, demonstrating through striking empirical examples the drama of social life. Producing successful dramas determines the outcome of social movements and provides the keys to political power. Modernity has neither eliminated aura nor suppressed authenticity; on the contrary, they are available to social actors who can perform them in compelling ways. This volume further consolidates Alexander’s reputation as one of the most original social thinkers of our time. It will be of great interest to students and scholars in sociology and cultural studies as well as throughout the social sciences and humanities.

Encyclopedia of Associations, Volume 1 Rowman & Littlefield

From its origins in academic discourse in the 1970s to our collective imagination today, the concept of “rape culture” has resonated in a variety of spheres, including television, gaming, comic book culture, and college campuses. *Beyond Blurred Lines* traces ways that sexual violence is collectively processed, mediated, negotiated, and contested by exploring public reactions to high-profile incidents and rape narratives in popular culture. The concept of rape culture was initially embraced in

popular media – mass media, social media, and popular culture – and contributed to a social understanding of sexual violence that mirrored feminist concerns about the persistence of rape myths and victim-blaming. However, it was later challenged by skeptics who framed the concept as a moral panic. Nickie D. Phillips documents how the conversation shifted from substantiating claims of a rape culture toward growing scrutiny of the prevalence of sexual assault on college campuses. This, in turn, renewed attention toward false allegations, and away from how college enforcement policies fail victims to how they endanger accused young men. Ultimately, she successfully lends insight into how the debates around rape culture, including microaggressions, gendered harassment and so-called political correctness, inform our collective imaginations and shape our attitudes toward criminal justice and policy responses to sexual violence.

Episcopal Clerical Directory 2023 Church Publishing, Inc. Sexual conflict -- what happens when the reproductive interests of males and females diverge -- occurs in all sexually reproducing species, including humans. The Oxford Handbook of Sexual Conflict in Humans is the first volume to assemble the latest theoretical and empirical work on sexual conflict in humans from the leading scholars in the fields of evolutionary psychology and anthropology. Following an introductory section that outlines theory and research on sexual conflict in humans and non-humans, ensuing sections discuss human sexual conflict and its manifestations before and during mating. Chapters in these sections address a range of factors topics and factors, including: - Sexual coercion, jealousy, and partner violence and killing - The

ovulatory cycle, female orgasm, and sperm competition - Chemical warfare between ejaculates and female reproductive tracts Chapters in the next section address issues of sexual conflict after the birth of a child. These chapters address sexual conflict as a function of the local sex ratio, men's functional (if unconscious) concern with paternal resemblance to a child, men's reluctance to pay child support, and mate expulsion as a tactic to end a relationship. The handbook's concluding section includes a chapter that considers the impact of sexual conflict on a grander scale, notably on cultural, political, and religious systems. Addressing sexual conflict at its molecular and macroscopic levels, The Oxford Handbook of Sexual Conflict in Humans is a fascinating resource for the study of intersexual behavior.

Sexual Violence in a Digital Age Reed Reference Publishing This book examines how digital communications technologies have transformed modern societies, with profound effects both for everyday life, and for everyday crimes. Sexual violence, which is recognized globally as a significant human rights problem, has likewise changed in the digital age. Through an investigation into our increasingly and ever-normalised digital lives, this study analyses the rise of technology-facilitated sexual assault, 'revenge pornography', online sexual harassment and gender-based hate speech. Drawing on ground-breaking research into the nature and extent of technology-facilitated forms of sexual violence and harassment, the authors explore the reach of these harms, the experiences of victims, the views of service providers and law enforcement bodies, as well as the implications for law, justice and resistance. Sexual Violence in a Digital Age is compelling reading for scholars, activists, and policymakers who

seek to understand how technology is implicated in sexual violence, and what needs to be done to address sexual violence in a digital age.

The field of forensic psychology explores the intersection of psychology and the law. The purpose of this book is to examine topics in the field using the powerful, multidisciplinary, conceptually integrated approach that the natural sciences have embraced for decades with great success. Darwin's theory of evolution by natural selection is the meta-theoretical framework that unifies the field of biology. It unites research and understanding of the development, control, and organization of behavior. The study of humans, which includes all of the social sciences, is part of the field of biology. Darwin's theory provides a powerful meta-theoretical framework that can unify and energize forensic psychology, just as it has the biological sciences. Evolutionary processes undoubtedly shaped physiological characteristics to help solve problems of survival and reproduction. The lungs, for example, with their vast surface area and moist membranes are marvelous adaptations for extracting oxygen and releasing carbon dioxide. Natural selection is the only known process capable of shaping complex functional mechanisms. Just as it shaped physiological adaptations with specific problem-solving functions, it also shaped our thoughts and emotions to guide behaviors toward solving recurrent problems of survival and reproduction. With this logic, we can use knowledge of ancestral problems to guide our understanding of how the mind works. Evolutionary Forensic Psychology is a necessary step toward a unified and complete understanding of

psychology and the law. It recognizes that crimes such as murder, non-lethal violence, rape, and theft are manifestations of evolutionarily recurrent selection when they gave individuals an advantage in competition for resources. Each of the chapters that comprise this volume has been selected to provide the first unified examination of important research contributions and future directions of Evolutionary Forensic Psychology.

Electronic Literature considers new forms and genres of writing that exploit the capabilities of computers and networks - literature that would not be possible without the contemporary digital context. In this book, Rettberg places the most significant genres of electronic literature in historical, technological, and

cultural contexts. These include combinatory poetics, hypertext fiction, interactive fiction (and other game-based digital literary work), kinetic and interactive poetry, and networked writing based on our collective experience of the Internet. He argues that electronic literature demands to be read both through the lens of experimental literary practices dating back to the early twentieth century and through the specificities of the technology and software used to produce the work. Considering electronic literature as a subject in totality, this book provides a vital introduction to a dynamic field that both reacts to avant-garde literary and art traditions and generates new forms of narrative and poetic work particular to the twenty-first century. It is essential reading for students and researchers in disciplines including literary studies, media and communications, art, and creative writing.
