Technology advances are making tech

more . . . human. This changes everything you thought you knew about innovation and strategy. In their groundbreaking book, *Human + Machine*, Accenture technology leaders Paul R. Daugherty and H. James Wilson showed how leading organizations use the power of human-machine collaboration to transform their processes and their bottom lines. Now, as new AI powered technologies like the metaverse, natural language processing, and digital twins begin to rapidly impact both life and work, those companies and other pioneers across industries are tipping the balance even more strikingly toward the human side with technology-led strategy that is reshaping the very nature of innovation. In *Radically Human*, Daugherty and Wilson show this

profound shift, fast-forwarded by the pandemic, toward more human—and more humane—technology. Artificial intelligence is becoming less artificial and more intelligent. Instead of data-hungry approaches to AI, innovators are pursuing data-efficient approaches that enable machines to learn as humans do. Instead of replacing workers with machines, they're unleashing human expertise to create human-centered AI. In place of lumbering legacy IT systems, they're building cloud-first IT architectures able to continuously adapt to a world of billions of connected devices. And they're pursuing strategies that will take their place alongside classic, winning business formulas like disruptive innovation. These against-the-grain approaches to the basic building

blocks of business—Intelligence, Data, Expertise, Architecture, and Strategy (IDEAS)—are transforming competition. Industrial giants and startups alike are drawing on this radically human IDEAS framework to create new business models, optimize post-pandemic approaches to work and talent, rebuild trust with their stakeholders, and show the way toward a sustainable future. With compelling insights and fresh examples from a variety of industries, Radically Human will forever change the way you think about, practice, and win with innovation.

Since the so-called 'cognitive revolution' in psychology in the 1960s, it has often been said that 'behaviourism is dead'. This book demonstrates why this is not the case and how the behavioural approach has continued to flourish. Leslie begins by summarising the behavioural approach to psychology and shows how it differs from other contemporary and cognitive approaches.

The basic principles of the discipline are outlined and linked to major areas of interest and importance, such as behavioural neuroscience, resolution of human behavioural problems, and human language and cognition. Behaviour analysis is thus shown to contribute to our developing understanding of the relationship between brain systems and psychological problems, to provide an effective and scientifically based approach to human behavioural problems and to deal with topics central

to modern psychology.
