Terrifying Beast of the Deep

Endangered: Lessons from the P Meg-omania hits the stores with "Megalodon," a hugely appealing look at the prehistoric underwater beast known to summer movie fans as "Jurassic shark!" New from Dr. Stephen Cumbaa, author of the million-copy best-seller "The Bones Book and Skeleton, Megalodon" takes young paleontologists deep beneath the prehistoric sea to investigate the habits of this monstrous shark, how it lived, what it ate, and why it became extinct. Complete with an excavation tool and a replica of a real Meg tooth embedded in a block of "stone," this hands-on science kit makes it fun for kids to dig in and discover one of the most incredible creatures to have inhabited our world.

#### The Megalodon and the Great White Shark Capstone

Dr. Leia Carpenter arrives aboard Sonar Platform 1 as the biggest storm of the season is closing in on the top secret research facility. Her job to confirm or debunk the results of the experiments being conducted there quickly becomes a desperate battle for survival.

Carpenter finds herself pitted against not only the raging storm and enemy agents but against a prehistoric creature that should not exist- a giant Megalodon with an equally large appetite and a burning desire for vengeance against those who have held it captive

#### **Great White Shark Vs. Megalodon**

Raintree

"Monsters" once swam through Earth's oceans, and they were likely the inspiration for ancient sightings by mariners who described fantastic encounters on the open seas. In this colorful new book, Dr. Carl Wieland's laymen-friendly descriptions are complemented by beautiful illustrations. Readers will be amazed that these

complex, huge beasts actually lived. This book provides a thoroughly biblical analysis, insisting that these "dragons of the sea" came into existence during the Creation Week as outlined in Genesis. Dragons of the Deep is totally evolution free, explaining the facts about fossils from a biblical perspective--Answers In Genesis.

#### Megalodon Severed Press

For millions of years, a massive shark more than twice as huge as the modern-day great white shark cruised the depths of the ocean, attacking and devouring prey. Fossil remains reveal megalodon to have been more than fifty feet long, with razor-sharp teeth, each the size of a human hand, and jaws so large it could swallow prey larger than a common dolphin. Fluid, detailed watercolors accompany this account of one of the most incredible creatures to inhabit our world.

#### **Megalodon Bloodshed** Random House

And you thought that Great White Sharks were big? Not even close next to a Megalodon. Megalodons were the biggest and deadliest sharks that ever lived. Enter the incredible world of these monster prehistoric creatures. Discover when they lived, what they ate and why they became extinct. Filled with full color illustrations, fascinating facts and easy to understand text. For readers young and old - from 6 to 100! Learn how these awesome predators ruled the oceans for millions of years. TJ Rob -

"Provides a revealing look at the prehistoric Mega Shark through a fictional graphic novel story, accompanied by nonfiction facts and fossil record information"--  
*Big Meg* Forge Books

Longer than a school bus and weighing more than 22 elephants, Megalodon was a truly enormous and powerful prehistoric predator. This ancient ancestor of today's most feared ocean predator, the shark, would have hunted whales and been able to snap up a great white shark as a snack! In this book, readers get to dive into the world of a prehistoric ocean giant and find out how scientists have used fossils and studies of modern-day sharks to look back millions of years and piece together the story of Megalodon.  
[Mega Shark \(megalodon\)](#) Somerville

House, USA

"Great white, bull, and tiger sharks are some of today's most talked-about sharks. But have you met the sharks of yesterday? Each prehistoric shark had its own amazing-and sometimes strange-features. The scissor-tooth shark had teeth in a spiral shape. The giant megalodon was about three times the size of a great white. One small prehistoric shark had a big dorsal fin in the shape of an ironing board! Readers will gobble up all the facts about these early ocean hunters and learn how they compare to modern sharks"--

NOW A HOLLYWOOD BLOCKBUSTER STARRING JASON STATHAM. On a top-secret dive into the Pacific Ocean's deepest canyon, Jonas Taylor found himself face-to-face with the largest and most ferocious predator in the history of the animal kingdom. The sole survivor of the mission, Taylor is haunted by what he's sure he saw but still can't prove exists - Carcharodon megalodon, the massive mother of the great white shark. Written off as a crackpot suffering from post-traumatic stress disorder, Taylor refuses to forget the depths that nearly cost him his life. But it takes an old friend in need to get him to return to the water, and a hotshot female submarine pilot to dare him back into a high-tech miniature sub. Diving deeper than he ever has before, Taylor will face terror like he's never imagined, and what he finds could turn the tides bloody red until the end of time. MEG is about to surface. When she does, nothing and no one is going to be safe, and Jonas must face his greatest fear once again. Includes MEG: Origins. 'Two words: Jurassic shark.' LA Times 'Sometimes only a story about a giant murderous prehistoric shark will do.' Guardian

*Megalodon* Smart Apple Media

TV scientist Prof Ben Garrod presents the biggest extinction events ever, told from the point of view of evolution's superstars, the most incredible animals ever to swim, stalk, slither or walk our planet. Whether you're 9 or 90, his unique exploration of the most destructive, yet most creative, force in nature makes top level science fun. Here are the superstars of the story of life, from the super-weird to the super-ferocious. Usually a species has 10 million years or so of evolving, eating, chasing, playing, maybe doing homework, or even going to the moon before it goes extinct. Megalodon, the super-predator, had the most powerful bite force ever measured! Terrorising the oceans, it hunted with stealth and skill, but even Megalodon died out, along with 50 percent of marine mammals, 2.5 million years ago. Find out why! 'An accessible, beautifully illustrated book that covers millions of years of natural history by focusing on one particularly deadly predator... I am intrigued to read the other books in the series'

LoveReading Collect all eight books about animals we have lost in mass extinctions caused by asteroids or mega-volcanoes, clashing continents and climate change. Past brought to full-colour life by palaeoartist Gabriel Ugueto

**Megalodon and Prehistoric Sharks**

Mendon Cottage Books

'Big Meg is big fun! It's packed to the gills with gobsmacking facts, insightful conjecture, and personal obs from two world-class scientists and explorers ... a

megalodon of delight for any shark-lover!' - Sy Montgomery, author of *The Soul of an Octopus* 'Tim Flannery scores again, diving into the murky myth-filled waters surrounding the world's biggest predator, and surfacing with a breathless true story stuffed with astounding facts and personal experience.' - Lucy Cooke, author of *Bitch* and *The Unexpected Truth about Animals* 'If you are not already addicted to Tim Flannery's writing, discover him now.' - Jared Diamond, author of *Collapse* and *Guns, Germs and Steel* 'Engagingly written and a real labour of love (down to the tiny fin at the bottom of each right hand page). Give this book to the wannabe palaeontologist in your life' - MAIL ON SUNDAY -----

----- Imagine a ferocious marine hunter up to twenty metres long, weighing twice as much as a humpback whale and ten times more than *Tyrannosaurus rex*. With jaws that can open two metres wide, crammed with 276 serrated fangs, it can bite down with the greatest force of any animal that has ever lived. This is the *Megalodon*, also known as 'the Bigtooth', and it swam in our waters three million years ago. Compared with the dinosaurs, wiped out 66 million years ago, this is but a stone's throw into our planet's shadowy past when monsters reigned. Yet the *Megalodon* has been largely absent from the fossil record, leaving behind only a smattering of teeth and vertebrae prized by collectors, its existence steeped in mystery... until now. Marking a milestone in palaeontology, Tim Flannery, celebrated environmentalist, zoologist and explorer, and his scientist daughter Emma, tell the story of the giant shark for the first time. *Big Meg* follows the quest to demystify the colossus that left Earth with barely a

trace, reveals where and how it lived, and discusses the theories and haunting stories surrounding this ancient legendary creature, including that it may still stalk the deep... This is the biography of the ultimate apex predator - a vital piece of the great natural history of our planet - and a compelling exploration of its awesome grip on the human imagination today.
