A Shepherd to Fools is the second of Drew Mendelson's trilogy of Vietnam War novels that began with *Song Ba To* and will conclude with *Poke the Dragon*. *Shepherd*: It is the ragged end of the Vietnam war. With the debacle of a failing South Vietnamese invasion of Northern Laos as background, *A Shepherd to Fools* tells the harrowing tale of a covert Hatchet Team of US soldiers and Montagnard mercenaries. They are ordered to find and capture or kill a band of American deserters, called Longshadows, before the world learns of their paralyzing rebellion. An earlier attempt to capture them failed disastrously, the facts of it buried. Captain Hugh Englander commands the Hatchet Team. He is a humorless bastard, sneering and discourteous to every regular army soldier. He cares little for the welfare of his own men and nothing for the lives of the deserters. The conflict between him and Captain David Weisman, the artillery officer assigned to the mission for artillery support, threatens to tear the team apart. Deep in the Laotian jungle, the team is caught in a final, horrific battle facing an enemy armed with Sarin nerve gas, the "worst of the worst" of the war's clandestine weapons.

Olympic Event Organization is the first text to address a number of important questions in contemporary mega-event management: Which organizations are involved in the Olympic Movement and in what capacity? What are the interorganizational flows of authority and finance between them? How is work grouped, in what unit sizes, how specialized and formalized are work processes? How complex, dynamic, diversified, or friendly is their environment? What are the power issues and how do the technological processes affect these organizations? How do the OCOGs evolve in their life cycle, what pressures shape their structures and management processes and how is work coordinated? The examination of the Olympic Games event organization in the 10-year period, from bidding to post-games closing down, draws material from host cities to explore the types of interorganizational flows that take place at various stages for the Olympic Games to be delivered. Knowledge transfer from one host city to the next and an established organizational field also means that management practises sometimes follow some externally imposed organizing logics. The challenges faced by organizers are discussed and the tensions that a strong management template from the IOC creates are also examined. Finally, the issue of sustainability of the Olympic Games is identified along with an analysis of the ways in which the concepts of impact are appropriated by the various stakeholders involved with the Olympic Games as they attempt to influence public opinion. Written in an accessible and insightful manner *Olympic Event Organization* is essential reading for both

academics and practitioners alike.

James Joyce left Ireland in 1904 in self-imposed exile. Though he never permanently returned to Dublin, he continued to characterize the city in his prose throughout the rest of his life. This volume elucidates the ways Joyce wrote about his homeland with conflicting bitterness and affection—a common ambivalence in expatriate authors, whose time in exile tends to shape their creative approach to the world. Yet this duality has not been explored in Joyce's work until now. The first book to read Joyce's writing through the lens of exile studies, *James Joyce and the Exilic Imagination* challenges the tendency of scholars to stress the writer's negative view of Ireland. Instead, it showcases the often-overlooked range of emotional attitudes imbuing Joyce's work and produces a fuller understanding of Joyce's canon.

Reconfigurations is a wide-ranging exploration of contemporary critical theory and of the forces that have transformed the classical modes of thought dominating Western theory from its beginnings. The book associates these transformations with Georges Bataille's idea of general economy, which relates its objects to the loss of meaning - a loss regarded as ineluctable within any given system. General economy, primarily in Nietzsche, Bataille, and Derrida, is compared with classical theories or restricted economies, which configure their objects as always meaningful and which claim to avoid the unproductive expenditure of energy and to contain multiplicity and indeterminacy within them. General economy exposes such claims as finally untenable, as we see here in great detail. *Reconfigurations* proposes complementarity as a critical model which can work out of general economy. This model is drawn from Niels Bohr's interpretation of quantum mechanics, where it accounts for the indeterminacy of quantum systems and, describes their conflicting aspects without subjecting them to classical synthesis. The book mutually enriches and develops both ideas - general economy and complementarity - within a comprehensive historical and theoretical framework, thus enabling the reader to see how general economy operates in and transforms the landscape of modernity and postmodernity. Proceeding from extensive consideration of the works of Nietzsche, Bataille, Derrida, Kant, Hegel, Marx, Freud, Heidegger, Althusser, Lyotard, Jameson, and commentaries on these authors, *Reconfigurations* offers both a cohesive overview of contemporary theory and a demonstration of this theory at work. The analysis of narrative through the idea of play and a juxtaposition of Nietzsche's and Derrida's discourse by way of Freud's notion of interminable analysis are only two of many fresh readings and examinations presented here. In contesting the bound
