Distance education, for long the Cinderella of the educational spectrum, had emerged in the 1970s and early 1980s as a valued component of many national educational systems in both developed and developing countries. The foundation of the Open Universities, developments in communications technology and in audio-, video- and computer-based learning, a new sophistication in the design of print-based materials and better support systems for the student learning at a distance had all contributed to the availability and quality of distance education programmes. Originally published in 1988, this book chronicles this great change in distance education. It presents the best writings on the subject published during the previous ten years. The articles selected for this volume provided a new scholarly basis for the theory and practice of distance education. The editors have brought together contributions from many countries and present authoritative introductions to each of the nine sections. This book provided those in both developed and developing countries with a guideline to one of the most rapidly expanding areas of education at the time.

For one-semester courses in labor economics at the undergraduate and graduate levels, this book provides an overview of labor market behavior that emphasizes how theory drives public policy. *Modern Labor Economics: Theory and Public Policy*, Twelfth Edition gives students a thorough overview of the modern theory of labor market behavior, and reveals how this theory is used to analyze public policy. Designed for students who may not have extensive backgrounds in economics, the text balances theoretical coverage with examples of practical

applications that allow students to see concepts in action. Experienced educators for nearly four decades, co-authors Ronald Ehrenberg and Robert Smith believe that showing students the social implications of the concepts discussed in the course will enhance their motivation to learn. As such, the text presents numerous examples of policy decisions that have been affected by the ever-shifting labor market. This text provides a better teaching and learning experience for you and your students. It will help you to: Demonstrate concepts through relevant, contemporary examples: Concepts are brought to life through analysis of hot-button issues such as immigration and return on investment in education. Address the Great Recession of 2008: Coverage of the current economic climate helps students place course material in a relevant context. Help students understand scientific methodology: The text introduces basic methodological techniques and problems, which are essential to understanding the field. Provide tools for review and further study: A series of helpful in-text features highlights important concepts and helps students review what they have learned.

**Dogmatic Constitution on Divine Revelation** Routledge Originally published in 1983, this book locates the behavioural approach to the study of politics in its social science and historical context. The text reviews the findings in a number of fields – public opinion, electoral behaviour, political participation, policy outputs, political recruitment, political welfare and socialisation, among others. The book is comprehensive and when first published it was the first single-author study to integrate the diverse findings of many studies both from the UK and North America. It was particularly written for students on courses in political analysis, political methods, political sociology and political behaviour

The WWDR 2014 on Water and Energy is now an annual and thematic report with a focus on different strategic water issues each year. It is shorter in the order of 100 pages with a standardized structure and data and case studies annexes related to the theme. The WWDR 2014 will be launched during the main World Water Day celebrations in Tokyo, Japan on 21 March 2014. Water and energy are closely interconnected and highly interdependent. Trade-offs need to be managed to limit negative impacts and foster opportunities for synergy. Water and energy have crucial impacts on poverty alleviation both directly, as a number of the Millennium Development Goals depend on major improvements in access to water, sanitation, power and energy sources, and indirectly, as water and energy can be binding constraints on economic growth the ultimate hope for widespread poverty reduction. This fifth edition of the United Nations World Water Development Report (WWDR 2014) seeks to inform decision-makers

**The Frontiers of Development Studies** World Bank Publications Using a large cross-country income distribution dataset spanning close to 800 country-year observations from industrial and developing countries, the authors show that the size distribution of per capita income is well approximated empirically by a lognormal density. The null hypothesis that per capita income follows a lognormal distribution cannot be rejected-although the same hypothesis is unambiguously rejected when applied to per capita consumption. The authors show that lognormality of per capita income has important implications for the relative roles of income growth and inequality changes in poverty reduction. When poverty reduction is the overriding policy objective, poorer and relatively equal countries may be willing to tolerate modest increases in income inequality in exchange for faster growth-more so than richer and highly unequal countries.

### The United Nations World Water Development Report - N° 5 - 2014 Courier Corporation

This first report deals with some of the major development issues confronting the developing countries and explores the relationship of the major trends in the international economy to them. It is designed to help clarify some of the linkages between the international economy and domestic strategies in the developing countries against the background of growing interdependence and increasing complexity in the world

economy. It assesses the prospects for progress in accelerating growth and alleviating poverty, and identifies some of the major policy issues which will affect these prospects.

Menurut Samuelson (dalam Putong, 2002: 15) ilmu ekonomi adalah suatu studi bagaimana orang-orang dan masyarakat membuat pilihan, dengan atau tanpa penggunaan uang, dengan menggunakan sumber-sumber daya yang terbatas tetapi dapat dipergunakan dalam berbagai cara untuk menghasilkan berbagai jenis barang dan jasa dan mendistribusikannya untuk keperluan konsumsi, sekarang dan di masa datang, kepada berbagai orang dan golongan masyarakat (Putong, 2002: 15). Selain Samuelson, pakar ekonom Ekelund dan Tollison (dalam Alam, 2013: 4) juga mengatakan bahwa ilmu ekonomi adalah ilmu yang mempelajari cara individu dan masyarakat yang mempunyai keinginan yang tidak terbatas memilih untuk mengalokasikan sumber daya yang terbatas demi memenuhi keinginan mereka. Ilmu ekonomi menurut Sudarman (1980: 1) merupakan cabang ilmu sosial yang menaruh perhatian pada masalah bagaimana seharusnya memanfaatkan sumber daya yang terbatas jumlahnya untuk memuaskan kebutuhan manusia yang beraneka ragam.

Those who study value conflicts have resisted rational choice approaches in the social sciences, contending that political conflict over cultural values is best explained by group loyalties, symbolic motives, and other "nonrational" factors. However, Chong shows that a single model can explain how people make decisions across both social and economic realms. He argues that our preferences result from a combination of psychological dispositions, which are shaped by social influences and developed over the life span. Chong's book yields insights about the circumstances under which preferences, beliefs, values, norms and group identifications are formed. It offers a provocative explanation of how ingrained social norms and values can change over time despite the forces maintaining the status quo. "Going beyond the tired polemics on both sides, [Chong] constructs a new interpretation of human behavior in which culture and individual rationality both matter. The synthesis is a more comprehensive and powerful explanatory framework than either side could have produced, and Chong's creativity should influence subsequent interpretations of our social life in fundamental ways."—Christopher H. Achen, University of Michigan

As new digital forms of formal and informal learning proliferate, there is an increasing need to better understand how people in different regions of the world are implementing massive open online courses (MOOCs) and other forms of open educational resources (OERs). Educators, researchers, politicians, and numerous other stakeholders want to grasp what the outcomes of these initiatives are and how they can be improved. Ongoing e-learning developments related to both technology and pedagogy have pushed institutions and organizations to grapple with issues of accreditation, credentialing, quality standards, innovative assessment, and learner motivation and attrition, among other areas of concern. In response, *MOOCs and Open Education Around the World* explores and illuminates unique implementations of MOOCs and open education across regions and nations. The book also focuses on the various opportunities

as well as the dilemmas presented in this rapidly evolving age of technology-enabled learning. What are the different delivery formats, interaction possibilities, assessment schemes, and business models? What are the key controversies or issues that must be discussed and addressed? This edited collection explains MOOCs and open education trends and issues in a variety of contexts, shares key research findings, and provides practical suggestions and recommendations for the near future.

Ekonomi mengelola pasar, transaksi jual-beli, tukar-menukar barang, dan jasa, secara daring maupun luring. Orang mengelola ekonomi tempatnya di pasar, di pusat perbelanjaan, di bursa saham, di aplikasi atau platform digital. Seperti tidak ada hubungan urusan politik yang membahas urusan meraih, membagi, mempertahankan kekuasaan, yang berada di gedung parlemen, kantor pemerintah, di tempat pemungutan suara (TPS) pada saat pemilihan umum berlangsung. Ekonomi memiliki hubungan yang intens dengan politik. Bila diibaratkan seperti dua sisi mata uang yang sama-sama bernilai, saling memberi nilai yang hanya ada pada saat keduanya ada secara bersamaan. Nyaris tidak ada keputusan politik yang tidak mempertimbangkan aspek ekonomi. Begitu pula bidang ekonomi, tidak dapat berjalan, bila tidak ada keputusan politik. Malah ada persoalan ekonomi yang kemudian terhenti karena kebijakan politik. Proses ekspor dan import barang dari satu negara ke negara lain, butuh kebijakan politik. Berapa banyak tahun ini misalnya Indonesia akan mengimpor beras dari Vietnam adalah keputusan politik. Meski beras adalah urusan ekonomi yang berkaitan dengan kebutuhan makan. Apakah politik harus dipisah dengan ekonomi? Atau apakah politik harus selalu berhubungan dengan ekonomi? Kedua pertanyaan itu akan dijelaskan di dalam buku ini. Buku ini berkaitan dengan "Ekonomi Politik Pembangunan."

Perkembangan teknologi yang pesat serta tantangan lingkungan global menuntut kita untuk mengubah pola pikir dan pendekatan kita terhadap pendidikan. Kalimantan Timur, dengan posisi strategis sebagai Ibu Kota Negara, harus beradaptasi dengan cepat dalam menerapkan konsep smart city dan green city di berbagai sektor, termasuk dalam pendidikan. Buku ini menawarkan berbagai pemikiran dan solusi konkret untuk menciptakan sistem pendidikan yang terintegrasi dengan teknologi modern dan kesadaran lingkungan yang mendalam. Namun, seperti dalam setiap gagasan besar, penerapan smart

city dan green city dalam dunia pendidikan di Kalimantan Timur tidak terlepas dari berbagai tantangan dan hambatan. Beberapa kritik yang patut menjadi perhatian adalah ketidaksiapan infrastruktur teknologi di banyak lembaga pendidikan, kurangnya pemahaman mendalam tentang konsep green city di kalangan pendidik, serta terbatasnya dukungan anggaran untuk penerapan program yang mendukung keberlanjutan lingkungan.

**An Outline of the Science of Political Economy** John Wiley & Sons  
With contributions from 35 leading economists, this forward-looking book explores the future of development economics against the background of the past half-century of development thought and practice. Outstanding representatives of the past two generations of development economists assess development thinking at the turn of the century and look to the unsettled questions confronting the next generation. The volume offers a thorough analysis of the broad range of issues involved in development economics, and it is especially timely in its critique of what is needed in development theory and policy to reduce poverty. An overriding issue is whether in the future 'development economics' is to be regarded simply as applied economics or whether the nature and scope of development economics will constitute a need for a special development theory to supplement general economic theory. 'Frontiers of Development Economics' is an ideal reference for all those working in the international development community.

Recent developments in this field of small corpus studies, largely brought about by the personal computer, have yielded remarkable insights into the nature and use of real language. This book presents work by a number of leading researchers in the field and covers a series of topics directly related to language teaching and language research. The ultimate aim of this book is to encourage the exploitation of small corpora by the ELT profession to make language learning more effective. In addition to descriptions of the basic corpus analysis tools, chapters in the collection cover syllabus and materials design, comparisons of different genres, descriptions of local and functional grammars, compilation and use of learner corpora, and making cross-linguistic comparisons. The message of this collection is that language use is purposeful and culture specific and that small corpus analysis is an effective method of linguistic investigation. Preface by: John Sinclair;
