The Great Dictionary English - Italian Springer

Cancer of the rectum continues to be a significant health problem in industrialized countries around the world. Relative 5-year survival rates in the USA for cancer of the rectum from 1995 to 2001 improved to 65%, a 15% improvement over 20 years (American Cancer Society, 2007). The reasons for this dramatic improvement include more accurate preoperative staging, aggressive neoadjuvant therapy and improved surgical technique as well as specialty-trained surgeons. Despite advances in nonoperative techniques of radiation therapy, chemotherapy and immunotherapy, surgical extirpation continues to be the cornerstone of curative treatment of this potentially lethal disease. Radical cancer excision with total mesorectal excision has become the preferred surgical procedure for even early-stage cancers of the rectum. Over the past decade the enthusiasm for local excision (and other local treatments) has given way to persuasive (predominantly retrospective) evidence that the incidence of locoregional recurrence due to unsuspected lymphatic metastases and positive lateral margins is unacceptably high even for stage T tumors. Vigorous attempts to find characteristics of the T1 tumor that would allow successful local treatments are ongoing.

CUIDADOS INTENSIVOS DEL PACIENTE QUEMADO Springer

This e-book is an overview of recent advances in the realm of kidney transplantation. The volume discusses developments in surgical procedures while presenting a perspective on possibilities for kidney transplant research in the future. The e-book is a **Current List of Medical Literature** Springer Science & Business

This book offers a comprehensive description of the main surgical treatments for adrenal tumors, encompassing both open surgery and laparoscopy. Introductory chapters cover surgical anatomy, pathology, the clinical diagnostic pathway, the role of different imaging techniques, and perioperative management. After discussion of general principles of adrenal surgery and

instrumentation, individual surgical techniques are described in detail with the aid of step-by-step color photos and schematic drawings. For each procedure, careful attention is paid to indications and contraindications and to the most frequent complications. A further feature is the inclusion of numerous helpful decision-making algorithms for diagnosis and treatment. The text is structured according to the principles of "best practice" and the guidelines on evidence-based medicine and will thus be a valuable tool for practitioners in their clinical work.

Surgical Management of Abdominal Wall Hernias Springer Nature

Dysphagia: Diagnosis and Treatment of Esophageal Motility Disorders provides a interdisciplinary overview of the diagnosis and management of dysphagia and other esophageal symptoms. All aspects of dysphagia are covered, with detailed consideration of both physiology and evaluation methods. Hot topics include coverage on the pharmacological causes of dysphagia, the physiology of normal swallowing, ambulatory pH monitoring as well as recurrent dysphagia after treatments. The content is grounded in evidence-based medicine that is the result of clinical outcome research, both prospective and randomized, making this the perfect reference for clinical researchers and a go-to for general surgeons, foregut surgeons, thoracic surgeons and gastroenterologists. - Presents a unified interdisciplinary approach to dysphagia covering perspectives from multiple specialties - Provides in-depth analysis of radiologic, endoscopic and manometric evaluation of dysphagia including analysis of the Chicago Classification 4.0, which has changed previous paradigms - Includes comprehensive coverage of dysphagia from evidence-based medicine that is the result of clinical outcome research, both prospective and randomized

Tenth International Congress of Military Medicine and Pharmacy: Official reports, tenth International congress of military medicine and pharmacy, Washington, D.C., May 7 to 15, 1939 Springer Science & Business Media

Includes section, "Recent book acquisitions" (various: Recent United States publications) formerly published separately by the U.S. Army Medical Library.

Kidney Transplantation Tecniche Nuove

In oncology today the accent lies on a multi-disciplinary approach, and consequently this handbook aims to provide wide-ranging information regarding all aspects of the surgical treatment of cancer. It deals with the basic subjects: the biology of cancer, detection and diagnosis, and treatment concepts. From screening to the application of markers, from new transplantation techniques to psychological aspects, an overall picture is presented. The surgeon will find chapters to enhance his knowledge of those areas which may not have required his attention until now. This volume should serve as a valuable reference for many years to come.

New Procedures in Open Hernia Surgery Springer Science & Business Media

The global population is aging rapidly, and as a result emergency abdominal surgery for acute abdomen in the elderly has become a global issue. Demographic changes in the population have also altered the profile of emergency abdominal surgery, with typical causes of acute abdomen in the elderly including acute cholecystitis, incarcerated hernia, bowel obstruction and appendicitis. In these patients, recovery from surgery is often complicated, leading to longer hospital stays compared with younger patients. Laparoscopy in the emergency setting is well established and offers a number of advantages over open surgical approaches, such as reduced postoperative pain, length of hospital stay and complication rates. While laparoscopic surgery for acute diverticulitis has become more widespread, in other conditions, like small bowel obstruction and perforated peptic ulcer, laparotomy is still used in about 70% of cases. Further, despite the urgent need for knowledge regarding surgical treatment of acute abdomen in the elderly, there is still a lack of evidence in this relevant clinical field. This book analyzes the management strategies and critically evaluates the outcomes of laparoscopic emergency surgery for acute abdomen in the elderly according to the principles of evidence-based medicine. Discussing each topic clearly, and promoting the use of emergency laparoscopy in elderly patients, the book is intended for young general surgeons and surgeons in training with at least a basic knowledge of surgery for acute abdomen. It is also useful as a quick reference tool during on-call shifts.

Index-catalogue of the Library ... Springer

This book describes the pathways of dissemination of primary liver, biliary, and pancreatic neoplasms and proposes a practical and clinically driven approach to their imaging. The typical dissemination pathways for hepatocellular carcinoma, cholangiocarcinoma, exocrine pancreatic carcinoma, and neuroendocrine pancreatic tumors are systematically reviewed, and more unusual pathways are also documented. The content is presented in an extremely schematic way, with numerous high-quality graphical illustrations and multimodality images (US, CT, MRI, and PET) that are accompanied by clear explanatory text. The clinical significance of findings and potential therapeutic options are explained whenever appropriate. In addition, relevant background information is provided on the role of morphopathological drivers of cancer spread and anatomy.

Bibliography of Medical Reviews Springer Science & Business Media

The increasing prevalence of morbid obesity has led the World Health Organization to coin the descriptive term “globesity” to reflect the worldwide nature of the problem. Providing health care to these patients, especially when surgery is required, can be extremely challenging owing to the specific needs in respect of logistics, facilities, and professional expertise. Appropriate care has to date often been unachievable and unaffordable outside of established bariatric centers, but such centers themselves usually have insufficient capacity and resources to cope with the demand among the general population. This book therefore provides a wealth of guidance and helpful tips and tricks on how to deal with obese patients within a general surgery setting. Importantly, it highlights the need for global rethinking on public health as regards resource allocation and patterns and standards of care, with the ultimate goal of improving outcomes through greater affordability.

Index of NLM Serial Titles BRILL

This two-volume textbook – the result of wide-ranging collaboration among renowned experts in aesthetic surgery from the Americas and Europe – presents state of the art concepts and techniques from across the entire spectrum of cosmetic surgery. It opens with some of the last writings of two of the giants in the discipline, Fernando Ortiz Monasterio and Daniel Marchac, whose contributions set the tone and standard for the rest of the book. In

all, there are ten sections covering every aspect of plastic surgery. A very wide range of surgical procedures that can be utilized by the plastic surgeon in training as well as by the established plastic surgeon are described in detail, and in the case of the face, nonsurgical treatments are also fully considered. Further topics include the history of the specialty, legal issues, and anticipated future developments, including regenerative medicine. Numerous beautiful color photographs and skillfully executed illustrations complement the informative text.

EAES Guidelines for Endoscopic Surgery Bentham Science Publishers

The inguinal hernia represents the most significant aspect of the technical and technological evolution of the second half of the 20th century, still in vogue at the beginning of this new millennium. We passed in fact, from a whole series of traditional procedures, with small variations, to the most modern ones with prosthesis, to arrive then to the laparoscopy. A surgical disease, which counts more than 200 different kinds of operations, as in the case of the inguinal hernia, does not exist. This is due to the whole surgical category's interest towards this disease, as well as to the fact that many surgeons try to create some new techniques, and to propose "new" prosthetic materials to the Companies in order to personalize and facilitate the procedure. Recently, in this context, within the open surgery field, several variations and a great number of other prosthetic procedures have been added to the original "Tension-free hernioplasty", described by Irving Lichtenstein at the beginning of the '70s, but widespread only at the end of the '80s. Some of these prosthetic techniques had a remarkable diffusion all over the world, while others were adopted only in certain countries. In the last few years some posterior repairs arose and this is the reason why, thanks to a wonderful day-congress in Naples, with every most modern open inguinal hernia repairs, realized with live-surgery, we had the idea to summarize and to illustrate them in this book.

Women in Skin Cancer: 2021 Benjamin Maximilian Eisenhauer

This book offers a critical edition of the petitions in their original Italian language that (Catholic) Jews residing in Italy submitted to the Fascist General Administration for Demography and Race (Demorazza) in order either to be “discriminated,” i.e., not subjected to various provisions of Mussolini’s racial laws.

The Globesity Challenge to General Surgery Benjamin

Maximilian Eisenhauer

This volume offers a comprehensive and up-to-date overview of the major surgical procedures performed on elderly patients. With advancing age the conditions that require surgery normally increase in incidence, and today all surgeons around the globe can be considered “geriatric surgeons”. The latest anesthesiological procedures, the technical improvements and an increased medical knowledge of the comorbidities impact have brought extraordinary advances in this field, but this should not allow us to forget that a careful assessment of elderly patients is necessary before undertaking surgery, since also the simplest surgical procedures could alter the delicate psychophysical equilibrium of these “frail” patients. Introduced by a demographic panorama and analysis, the book describes the anesthesiological management, the preoperative assessment and preparation, the perioperative care, and hemostasis control connected with the main surgical pathologies: gastrointestinal, endocrine, neoplastic, vascular and hepato-biliary, as well with traumatic and non-traumatic emergencies. It will be an invaluable, easy-to-use resource for clinicians, researchers and trainees alike.

International Textbook of Aesthetic Surgery Washington

Mi sono laureato nel febbraio dell'anno accademico 1963-1964. Precedentemente, durante gli anni di studio, avevo frequentato, in particolare, l'istituto di patologia generale, anatomia patologica, clinica chirurgica e clinica medica. Dopo la laurea sono stato interno per più di un anno presso l'istituto di patologia medica per meglio prepararmi all'esame di stato di abilitazione alla professione medico-chirurgica e per imparare dai maestri della medicina, "di allora", l'arte di fare il medico...

Emergency laparoscopic surgery in the elderly and frail patient Springer Science & Business Media

This translational book describes in detail the clinical application of novel approaches in cancer immunotherapy with the aim of educating clinicians in the implications of the most recent research and new developments in the field. The scope is broad, encompassing, for example, prognostic biomarkers for personalized cancer treatment, strategies for targeting tumor immunosuppression, gene therapy, virus-based vaccines, targeting of cancer stem cells, hematopoietic stem cell transplantation, the role of T lymphocytes in cancer immunotherapy, use of monoclonal antibodies, and many more

innovative approaches. Clinical immunologists, hematologists, and oncologists in particular will find the book to be of value in expanding their knowledge. The book is the second in a three-volume series, *Cancer Immunology*, which offers an up-to-date review of cancer immunology and immunotherapy. The remaining volumes focus on the immunopathology of cancers and cancer immunotherapy for organ-specific tumors. In total the series, designed for both clinicians and researchers, includes contributions from more than 250 scientists working at leading universities and institutes from across the world.

Bibliography of Medical Reviews Springer

This book gathers recommendations of the European Association for Endoscopic Surgery (EAES), as compiled by leading European laparoscopic surgeons. The book offers an overview of current surgical research. All recommendations precisely describe the proven benefit of each surgical procedure and technique. Chapters follow a structured format to allow quick identification of recommendations. This work provides a highly usable and practice-oriented overview of the achievements in laparoscopic surgery throughout the last decade.

Esophageal Carcinoma Springer

A group of international experts point the way forward through the new techniques and refinements of old techniques for managing abdominal hernias.

Biomedical Serials, 1950-1960 Springer Science & Business Media

This dictionary contains around 60,000 Italian terms with their English translations, making it one of the most comprehensive books of its kind. It offers a wide vocabulary from all areas as well as numerous idioms. The terms are translated from Italian to English. If you need translations from English to Italian, then the companion volume *The Great Dictionary English - Italian* is recommended.

Thesiologist, were not included. Perhaps the next symposium will have a paper on his many contributions. Even though his dates are not quite modern (1813-1858), his accomplishments were, especially his book *On Chloroform and Other Anaesthetics* (1858),

the first comprehensive textbook on anaesthesia [2]. There has been a real renaissance of interest in the history of anaesthesia. Among those responsible for this rebirth, besides Dr. Ruprecht and Dr. Erdmann, are Dr. Selma Calmes and Dr. Rod Calverley, now on the Board of the new American society, the Anesthesia History Association. It held its inaugural meeting in Atlanta, Georgia, during the annual meeting of the American Society of Anesthesiologists, on 9 October 1983. The meeting was well attended, and the evening was profitable and delightful. Mention should also be made of the accomplishments of the nurse anaesthetists [3]. They are many in number, and generally they work under the direction of a physician anaesthesiologist. Although modern anaesthesia was America's first great medical discovery, it soon traversed the globe and found worldwide acceptance. The British, for example, have made many coeval and historic contributions. Besides Dr. Duncum one thinks of Prof. T. Cecil Gray, who pioneered the British use of ether [4], and Dr. J. Alfred Lee, who was a pioneer in the use of spinal anaesthesia and is currently working on the fifth edition of a textbook on spinal analgesia [7]. Dr.
