After nearly 20 years of teaching Lewis Morris discovered a startling fact: Most students didn't struggle with the subject, they struggled with the language. It was never about brains or ability. His students simply didn't have the knowledge of the specific language needed to succeed. Through experimentation and research, he discovered that for any subject there was a list of essential words, that, when mastered, unlocked a student's ability to progress in the subject. Lewis called this set of vocabulary the "Insider's Words". When he applied these "Insider's Words" the results were incredible. His students began to learn with ease. He was on his way to developing the landmark series of workbooks and applications to teach this "Insider's Language" to students around the world.

A KID'S GUIDE TO THE OCEAN "Can you imagine a world without fish? It's not as crazy as it sounds. But if we keep doing things the way we've been doing things, fish could become extinct within fifty years. So let's change the way we do things!" World Without Fish is the uniquely illustrated narrative nonfiction account—for kids—of what is happening to the world's oceans and what they can do about it. Written by Mark Kurlansky, author of Cod, Salt, The Big Oyster, and many other books, World Without Fish has been praised as "urgent" (Publishers Weekly) and "a wonderfully fast-paced and engaging primer on the key questions surrounding fish and the sea" (Paul Greenberg, author of Four Fish). It has also been included in the New York State Expeditionary Learning English Language Arts Curriculum. Written by a master storyteller, World Without Fish connects all the dots—biology, economics, evolution, politics, climate, history, culture, food, and nutrition—in a way that kids can really understand. It describes how the fish we most commonly eat, including tuna, salmon, cod, swordfish—even anchovies— could disappear within fifty years, and the domino effect it would have: the oceans teeming with jellyfish and turning pinkish orange from algal blooms, the seabirds disappearing, then reptiles, then mammals. It describes the back-and-forth dynamic of fishermen, who are the original environmentalists, and scientists, who not that long ago considered fish an endless resource. It explains why fish farming is not the answer—and why sustainable fishing is, and how to help return the oceans to their natural ecological balance. Interwoven with the book is a twelve-page graphic novel. Each beautifully illustrated chapter opener links to the next to form a larger fictional story that perfectly complements the text.

How can you use the latest digital technology to create an environment in which people can learn European languages while performing a meaningful real-world task and experiencing the cultural aspect of learning to cook European dishes? This book explains how to do this from A to Z, covering how a real-world digital environment for language learning was designed, built and researched. The project makes language learning motivational and fun by tapping into people's interest in both cooking and technology - you can learn a language while cooking and interacting with a speaking digital kitchen. The kitchens provide spoken instructions in the foreign language on how to prepare European cuisine. Digital sensors are inserted in or attached to all the kitchen equipment and ingredients, so the digital kitchen detects what learners are doing and gives them feedback. Learners are also able to communicate with the kitchens and can ask for help via photos and videos if they don't understand any foreign language words. Based on two research grants, the book provides five research studies showing the learning experiences of users in five European countries. The book explains the principles and procedures involved in the project, enabling others to design and implement a real-world digital learning environment in the same way. It includes numerous photographs of the system in use and evidence of how and what 250 users actually learnt.

Get out of the classroom and into the field, where students can get up close and personal with the environment. Exploring Ecology gets you ready and then tells you what to do when you get there. It's a collection of hands-on, inquiry-based activities developed and written by two teachers who test-drove them with their own students. The book can be used for an eight-week unit on ecology or for shorter one- or two-week units. Designed specifically for easy use, Exploring Ecology combines content with activities, all in one place, and organized into four clear sections. After starting with "Management, Mechanics, and Miscellany," which includes guidance on safety, preparation, materials, and discipline, the authors get to the activities: "The Basic Introduction to Ecology" covers basic ecological concepts, including populations, communities, food webs, and energy flow with 35 in-class and outside activities that prepare students for their trip. "The Field Trip: Applying Ecology Concepts" offers practical suggestions on site selection and organizing the students and their materials, plus four before- and after-the-trip activities. "Integration and Extension" provides 10 more activities to integrate other disciplines; language arts, social studies, and art, and extend the students' understanding of Earth as an ecosystem. Although the book is targeted to teachers of science in grades 4 - 8, many activities have been adapted for students ranging from first grade to high school.
