Physics for Scientists and Engineers, Volume 2 Springer

Nations around the globe consider physics education an important tool of economic and social development and currently advocate the use of innovative strategies to prepare students for knowledge and skills acquisition. Particularly in the last decade, a series of revisions were made to physics curricula in an attempt to cope with the changing needs and expectations of society. Educational transformation is a major challenge due to educational systems' resistance to change. Updated curriculum content, pedagogical facilities (for example, computers in a school), new teaching and learning strategies and the prejudice against girls in physics classes are all issues that have to be addressed. Educational research provides a way to build schemas and resources to promote changes in physics education. This volume presents physics teaching and learning research connected with the main

educational scenarios.

McGraw-Hill Education

This book reports on advanced theories and methods in three related fields of research: applied physics, system science and computers. It is organized in two main

parts, the first of which covers applied physics topics, including lasers and accelerators; condensed matter, soft matter and materials science; nanoscience and quantum engineering; atomic, molecular, optical and plasma physics; as well as nuclear and high-energy particle physics. It also addresses astrophysics, gravitation, earth and environmental science, as well as medical and biological physics. The second part focuses on advances in system science and computers, exploring automatic circuit control, power systems, computer communication, fluid mechanics, simulation and modeling, software engineering, data structures and applications of artificial intelligence among other areas. Offering a collection of contributions presented at the 1st International Conference on Applied Physics, System Science and Computers (APSAC 2016), the book bridges the gap between applied physics and electrical engineering. It not only presents new methods, but also promotes collaborations between different communities working on related topics at the interface between physics and engineering, with a special

focus on communication, data modeling and visualization, quantum information, applied mechanics as well as bio and geophysics.

"Dear Students and Instructors: Welcome to college physics! To the students: We know there is a negative stigma associated with physics, and you yourself

may harbor some trepidation as you begin this course. But fear not! We are here to help. Whether you are worried about your math proficiency, understanding the concepts, or developing your problem-solving skills, the resources available to you are designed to address all of these areas and more. When we were students and had to take introductory physics, we had a printed textbook, a pencil, and some paper. That was it! Can you learn physics this way? You bet! We did! But research has shown that learning styles vary greatly among students. Maybe some of you have a more visual preference, or auditory preference, or some other preferred learning modality. In any case, the resources available to you in this course will satisfy all of these preferences and improve your chance of success. Take a moment to explore below what the textbook and online course have to offer. We suspect that, as you continue to improve throughout the course, some of that initial trepidation will be replaced with some excitement. To start, 12e will continue to offer a new learning medium unique to this book in the form of a comprehensive set of lecture videos - one

for every section (259 in all). These animated lectures (created and narrated by the authors) are 2 - 10 minutes in length, and explain the basic concepts and learning objectives of each section. They are assignable within WileyPLUS and can be paired with follow-up questions that are gradable. In addition to supplementing traditional lecturing, the videos can be used in a variety of ways, including, flipping the classroom, lectures for online courses, and reviewing for exams"--
