The Importance of Being Little

EWING COLLIER

"Christakis . . . expertly weaves academic research, personal experience and anecdotal evidence into her book . . . a bracing and convincing case that early education has reached a point of crisis . . . her book is a rare thing: a serious work of research that also happens to be well-written and personal . . . engaging and important." --

Washington Post "What kids need from grown-ups (but aren't getting)...an impassioned plea for educators and parents to put down the worksheets and flash cards, ditch the tired craft projects (yes, you, Thanksgiving Handprint Turkey) and exotic vocabulary lessons, and double-down on one, simple word: play." --NPR The New York Times bestseller that provides a bold challenge to the conventional wisdom about early childhood, with a pragmatic program to encourage parents and teachers to rethink how and where young children learn best by taking the child's eye view of the learning environment To a four-year-old watching bulldozers at a construction site or chasing butterflies in flight, the world is awash with promise. Little children come into the world hardwired to learn in virtually any setting and about any matter. Yet in today's preschool and kindergarten classrooms, learning has been reduced to scripted lessons and suspect metrics that too often undervalue a child's intelligence while overtaxing the child's growing brain. These mismatched expectations wreak havoc on the family: parents fear that if they choose the

"wrong" program, their child won't get into the "right" college. But Yale early childhood expert Erika Christakis says our fears are wildly misplaced. Our anxiety about preparing and safeguarding our children's future seems to have reached a fever pitch at a time when, ironically, science gives us more certainty than ever before that young children are exceptionally strong thinkers. In her pathbreaking book, Christakis explains what it's like to be a young child in America today, in a world designed by and for adults, where we have confused schooling with learning. She offers real-life solutions to real-life issues, with nuance and direction that takes us far beyond the usual prescriptions for fewer tests, more play. She looks at children's use of language, their artistic expressions, the way their imaginations grow, and how they build deep emotional bonds to stretch the boundaries of their small worlds. Rather than clutter their worlds with more and more stuff, sometimes the wisest course for us is to learn how to get out of their way. Christakis's message is energizing and reassuring: young children are inherently powerful, and they (and their parents) will flourish when we learn new ways of restoring the vital early learning environment to one that is best suited to the littlest learners. This bold and pragmatic challenge to the conventional wisdom peels back the mystery of childhood, revealing a place that's rich with possibility.

This book elaborates on drug delivery targeting via intracellular delivery, specifically through the Receptor Mediated Endocytosis (RME) approach, due to the involvement of cellular receptors in various grave diseases.

Targeted delivery relies on two basic approaches, passive and active targeting. While passive targeting approaches have shown great promise, the improved selectivity achieved with active targeting approaches has resulted in significantly higher efficacy. Interestingly there are numerous strategies for active targeting, many of which are already highlighted in , Targeted Drug Delivery: Concepts and Applications. Nevertheless an exciting and practical strategy for active targeting, which could enable high intracellular delivery, is through exploitation of RME. Cells in the body express receptors to enable various physiological and biochemical processes. As a result, many of these receptors are overexpressed in pathological conditions, or newer receptors expressed due to defective cellular functioning. RME is based on exploitation of such receptors to achieve intracellular delivery. While targeted delivery can have manifold applications, in this book we focus on two major and challenging therapeutic areas; i) Cancer and ii) Infectious Diseases. Targeted Intracellular Drug Delivery by Receptor Mediated Endocytosis discusses the major receptors that are useful for targeted delivery for these afflictions. A major section of this book is dedicated to details regarding their occurrence and location, the recognition domain of the receptor, structure activity relationship of substrate /ligand for selective binding, ligands explored, antagonists for ligand binding and relevance of these aspects for therapy of cancer and infectious diseases. These facets are elucidated with the help of specific examples from academic research and also emphasize commercial products, wherever relevant. In vitro cellular models relied on for

assessing receptor mediated cellular targeting and in vivo models depicting clinical efficacy are focused on in a separate section. Finally, we briefly discuss the regulatory and toxicity issues that may be associated specifically with the RME approach of intracellular drug delivery.

A moving account of how a soccer team made up of diverse refugees inspired an entire community here in the United States. Based on the adult bestseller, Outcasts United: An American Town, a Refugee Team, and One Woman's Quest to Make a Difference, this young people's edition is a complex and inspirational story about the Fugees, a youth soccer team made up of diverse refugees from around the world, and their formidable female coach, Luma Mufleh. Luma Mufleh, a young Jordanian woman educated in the United States and working as a coach for private youth soccer teams in Atlanta, was out for a drive one day and ended up in Clarkston, Georgia, where she was amazed and delighted to see young boys, black and brown and white, some barefoot, playing soccer on every flat surface they could find. Luma decided to quit her job, move to Clarkston, and start a soccer team that would soon defy the odds. Despite challenges to locate a practice field, minimal funding for uniforms and equipment, and zero fans on the sidelines, the Fugees practiced hard and demonstrated a team spirit that drew admiration from referees and competitors alike. Outcasts United explores how the community changed with the influx of refugees and how the dedication of Luma Mufleh and the entire Fugees soccer team inspired an entire community. Since the dawn of aviation, Idahoans have employed aircraft to carry people, groceries, mail, freight, and livestock over inhospitable terrain. Idaho's airstrips are the stuff of dreams, offering pilots, anglers, hikers, and river-rafters access to deep wilderness less than an hour from the city. Aerial firefighting was born--and is based--in Idaho. Flight instructors in Idaho prepared thousands of pilots to fight in World War II. As the birthplace of United Airlines, with its famed "friendly skies," Idaho is one of the country's most aviation-friendly states. Government officials, private landowners, and volunteers have worked together to create and then preserve an infrastructure of big-city, small-town,

and backcountry airstrips that are the envy of pilots worldwide.

In recent years, ion implantation has developed into the major doping technique for integrated circuits. Several series of conferences have dealt with the application of ion implantation to semiconductors and other materials (Thousand Oaks 1970, Garmisch-Partenkirchen 1971, Osaka 1974, Warwick 1975, Boulder 1976, Budapest 1978, and Albany 1980). Another series of conferences was devoted more to implantation equipment and techniques (Salford 1977, Trento 1978, and Kingston 1980). In connection with the Third International Conference on Ion Implantation: Equipment and Techniques, held at Queen's University, Kingston, Ontario, Canada, July 8-11,

1980, a two-day instructional program was organized parallel to an implantation conference for the first time. This implantation school concentrated on aspects of implantation-equipment design. This book contains all lectures presented at the International Ion Implantation School organized in connection with the Fourth International Conference on Ion Implantation: Equipment and Techniques, held at the Convention Center, Berchtesgaden, Germany, September 13-17, 1982. In contrast to the first school, the main emphasis in this school was placed on practical aspects of implanter operation and application. In three chapters, various machine aspects of ion implantation (general concepts, ion sources, safety, calibration, dosimetry), range distributions (stopping power, range profiles), and measuring techniques (electrical and non-electrical measuring techniques, annealing) are discussed. In the appendix, a review of the state of the art in modern implantation equipment is given.

"With the collaboration of a number of dedicated teachers and their students, Susan Empson and Linda Levi have produced a volume that is faithful to the basic principles of CGI while at the same time covering new ground with insight and innovation." -Thomas P. Carpenter
This highly anticipated follow-up volume to the landmark *Children's Mathematics: Cognitively Guided Instruction* addresses the urgent need to help teachers understand and teach fraction concepts. Fractions remain one of the key stumbling blocks in math education, and here Empson and Levi lay a foundation for understanding fractions and decimals in ways that build conceptual learning.

They show how the same kinds of intuitive knowledge and sense making that provides the basis for children's learning of whole number arithmetic can be extended to fractions and decimals. Just as they did in *Children's Mathematics and Thinking Mathematically*, Empson and Levi provide important insights into children's thinking and alternative approaches to solving problems. Three themes appear throughout the book: building meaning for fractions and decimals through discussing and solving word problems the progression of children's strategies for solving fraction word problems and equations from direct modeling through relational thinking designing instruction that capitalizes on students' relational thinking strategies to integrate algebra into teaching and learning fractions. With illuminating examples of student work, classroom vignettes, "Teacher Commentaries" from the field, sample problems and instructional guides provided in each chapter, you'll have all the tools you need to teach fractions and decimals with understanding and confidence.

Sanger Rainsford is a big-game hunter, who finds himself washed up on an island owned by the eccentric General Zaroff. Zaroff, a big-game hunter himself, has heard of Rainsford's abilities with a gun and organises a hunt. However, they're not after animals - they're after people. When he protests, Rainsford the hunter becomes Rainsford the hunted. Sharing similarities with "The Hunger Games", starring Jennifer Lawrence, this is the story that created the template for pitting man against man. Born in New York, Richard Connell (1893 - 1949) went on to become an

acclaimed author, screenwriter, and journalist. He is best remembered for the gripping novel "The Most Dangerous Game" and for receiving an Oscar nomination for the screenplay "Meet John Doe".

A cognitive psychologist and an industrial design engineer draw from their experiences trying to make technology work for people to reflect on the foundations of Cognitive Science and Product Design. This work is motivated by the sense that there is a large gap between the type of experiences studied in laboratories and experiences of people working with every day technology. This has led the authors to question the metaphysical foundations of cognitive science and to suggest

alternative directions that might provide better insights for design. An important inspiration for this alternative direction is Pirsig's *Metaphysics of Quality* described in *Zen and the Art of Motorcycle Maintenance* and *Lila*. This book takes the reader on a journey beyond the conventional dichotomy of mind and matter to explore a world of 'what matters' in hopes of inspiring the design of human-technology systems that work beautifully.

Animal experimentation has been one of the most controversial areas of animal use, mainly due to the intentional harms inflicted upon animals for the sake of hoped-for benefits in humans. Despite this rationale for continued animal experimentation, shortcomings of this practice have become increasingly more apparent and well-documented.

However, these limitations are not yet widely known or appreciated, and there is a danger that they may simply be ignored. The 51 experts who have contributed to *Animal Experimentation*:

Working Towards a Paradigm Change critically review current animal use in science, present new and innovative non-animal approaches to address urgent scientific questions, and offer a roadmap towards an animal-free world of science.
