From historic cities and cultural landscapes to some of the largest archaeological sites in the world, conserving such a legacy is a challenging task that requires commitment, effort and international cooperation that this book proves possible. This document sets out the assumptions and methodologies underlying costings for tax and Annually Managed Expenditure (AME) policy decisions announced since Autumn Statement 2011, where those policies have a greater than negligible impact on public finances. The costing for the change from 50% to 45% additional rate of income tax can be found in the HMRC's additional rate evaluation document (ISBN 9780108511516). This sets out considerable detail on the additional rate, including estimates of forestalling, other behavioural responses and the steady state yield. Chapter 2, presents detailed information on the key data and assumptions underpinning the costing policies in the 2012 Budget. Each

note sets out the description of the measure, the base, the methodology for the costing and highlights any areas of additional uncertainty. Annex A sets out the indexation assumptions included on the public finances forecast baseline, including all pre-announcements

A remarkable indictment of how misguided business policies have undermined the American higher education system. Winner of the CHOICE Outstanding Academic Title of the Choice ACRL Higher education in America, still thought to be

the world leader, is in crisis. University students are falling behind their international peers in attainment, while suffering from unprecedented student debt. For over a decade, the realm of American higher education has been wracked with self-doubt and mutual recrimination, with no clear solutions on the horizon. How did this happen? In this stunning new book, Christopher Newfield offers readers an in-depth analysis of the “great mistake” that led to the cycle of decline and dissolution, a mistake that impacts every public college and university in America. What might occur, he asserts, is no less than locked-in economic inequality and the fall of the middle class. In *The Great Mistake*, Newfield asks how we can fix higher education, given the damage done by private-sector models. The current accepted wisdom—that to succeed, universities should be more like businesses—is dead wrong. Newfield combines firsthand experience with expert analysis to show that private funding and private-sector methods cannot replace public funding or improve efficiency, arguing that business-minded practices

have increased costs and gravely damaged the university's value to society. It is imperative that universities move beyond the destructive policies that have led them to destabilize their finances, raise tuition, overbuild facilities, create a national student debt crisis, and lower educational quality. Laying out an interconnected cycle of mistakes, from subsidizing the private sector to "the poor get poorer" funding policies, Newfield clearly demonstrates how decisions made in government, in the corporate world, and at colleges themselves contribute to the dismantling of once-great public higher education. A powerful, hopeful critique of the unnecessary death spiral of higher education, *The Great Mistake* is essential reading for those who wonder why students have been paying more to get less and for everyone who cares about the role the higher education system plays in improving the lives of average Americans.
