The Manchester Triage System (MTS) is the most widely used triage system in the UK, Europe and Australia, with tens of millions of patients being processed through hospital emergency departments. It is also used in hospitals throughout Brazil. Emergency Triage is the core text for the MTS, which utilises a risk averse system of prioritisation for patients in all unscheduled care settings. As such, it is an essential text for all emergency department staff using the MTS, in particular triage nurses. The book is both a training tool and a reference for daily use in the Emergency Department and prehospital settings. This edition features revised protocols that reflect new approaches to prioritisation, with accompanying revised flowcharts - the core part of the book. Table of Contents

Dr. Joshua Lederberg - scientist, Nobel laureate, visionary thinker, and friend of the Forum on Microbial Threats - died on February 2, 2008. It was in his honor that the Institute of Medicine's Forum on Microbial Threats convened a public workshop on May 20-21, 2008, to examine Dr. Lederberg's scientific and policy contributions to the marketplace of ideas in the life sciences, medicine, and public policy. The resulting workshop summary, *Microbial Evolution and Co-Adaptation*, demonstrates the extent to which conceptual and technological developments have, within a few short years, advanced our collective understanding of the microbiome, microbial genetics, microbial communities, and microbe-host-environment interactions.

Structural and functional abnormalities of arteries and veins manifest clinically in a broad spectrum of disorders, including aneurysmal disease, atherosclerosis, vasculitis, venous insufficiency, microvascular complications, thrombo-embolism and lower limb ulceration. Many of these are common and/or chronic conditions which present for initial assessment by primary health care workers. This new edition is a practical guide to the most commonly presenting disorders, and provides a structured approach to clinical assessment, investigations and management. The last few years have seen major changes in the use of non-invasive or minimally-invasive techniques, e.g. wider use of CT and MR angiography, and increasing use of percutaneous interventions for carotid, lower limb and reno-vascular disease. The ABC of Arterial and Venous Disease (Second Edition) explains the underlying technology and the applications of new minimally-invasive methods, especially CT and MRI, and provides an up-to-date, evidence-based guide to the modern day management of patients with common, life-threatening diseases involving different parts of the circulation. This authoritative, full-colour, illustrated ABC is an ideal reference for the primary care, non-specialist practitioner to base effective management and prevention programmes.
